> Is it any more of a `violation' for someone to pick up an ht on the rs
> counter and `kerchunk' a repeater as it is for someone who does NOT have
> a driver's license to start the engine of a car in a showroom?

Yes, because the starting of the engine of a car is more comparable to turning the HT on. The actual transmitting with the HT and "kerchunking" a repeater is analogous to "driving" the car. Of course, no license, not legal.

My question, however, is why would Radio Shack be the responsible party? Isn't the person who makes the actual transmission the responsible party? Maybe this is another example of those in our society not wanting to take responsibility for themselves...

> If a tree falls in the forest...:-)

hm. smells like dog poop... ;-)

> I think it might be a good idea that the TX STOP function come ENABLED
> from the factory. Then, the customer should learn how to DISABLE it before
> they can talk on the radio. What do you think?

Could this be a way to put the individuals responsibility to follow the rules on someone else? I don't think this would be such a hot OR effect idea. I do see your point that making a customer READ the manual will increase the odds that they will read they must have a license before transmitting. This will in no way stop the person who is intent on transmitting illegally, only slow him down a minute or two. It WOULD make the employees at RS very irritated at the customers who would (no doubt!) be returning their "defective" radios!

This reminds me of a couple of funny posts on USENET by amateur(s) waiting for their license to arrive. It seems they have the radios all ready to go but have decided that they can't trust themselves enough not to transmit, so they have enabled the TX Stop. Ha! Go figure... again...

So what's happened to the hamblaster. It was such a big deal at one time,
There was a mail list about it but the list went silent. Even saw a piece
in QST about it.

Where is it now?

8. The American Morse Code

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-01 04:59:52 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <Cwz9vt.D2v@news.Hawaii.Edu>
Source record: 259277

Someone on the QRP (email) newsgroup spoke of a `funny looking' code he'd seen on a cereal box. I took that as a cue to post the following; I'm posting it here in case some of you might be interested. Note that I've appended a couple of responses at the end - one from the QRP group and the other from the Boatanchors (tube radio) email newsgroup.

Jeff NH6IL

**********Begin Included Article**********

Here's the American Morse Code (as opposed to International or sometimes called Continental Code).

American Morse was formerly used on overland telegraph lines in the US and Canada.

Note the I've used = to indicate a long dash; there were actually three elements to this code: a dot, a short dash, and a long dash. Both L and 0 use identical elements: a long dash.

Note that some letters, such as C, contain a space between their elements.

```
A .- K -.- U ..- 5 ---
B -... L = V ...- 6 ......
C .. . M -- W .-- 7 --..
D -.. N -. X .-.. 8 -....
E . O . . Y .. .. 9 -..-
F .-. P ..... Z ... . 0 =
G --. Q ..-. 1 .--. , .-.-
H .... R . .. 2 ..-.. . ..--..
I .. S ... 3 ...-. & . ...
J -.-. T - 4 ....-
```

I wonder if there's ever been a net on the ham bands where the fellows used American Morse; Bob, NA4G, any ideas?

Jeff NH6IL

And here's a reply to the above question:

Jeff,

I understand that there is an "American Morse Net" operating every day on 3545 kHz at 1300 UTC and 0030 UTC. Reportedly, the operators use handkeys, bugs, and sounders "just like the old landlines."

There was an article on American Morse Code by Dave Ingram (K4TWJ) in the February, 1988 issue of CQ magazine.

73, Jim Rybak W0KSD

and here's another response to my question:

Jeff Herman asked if there are any American Morse nets still around.
==========

The Morse Telegraph Club still has small nets that use American Morse.

The club is dedicated to capturing the lore and legend of the heydays of Morse Code, its operators, equipment, and ancillary nostalgia like railroads, military applications, sea going ships and Panama Canal barges. Telegraphy once was the heartbeat of the country and the world. The copper wires were entrusted with the lifeblood of our budding nation... news of births, graduations, weddings, sickness and deaths, travel arrangements, sporting events, commercial transactions, elections, wartime urgencies, and peacetime reunions. <Sigh. Turn off nostalgic ramblings.>

$7 a year will get you their quarterly tabloid called "Dots and Dashes" chock full of historical reminiscences and photos, and reports on recent telegraph demonstrations, and reenactments. I have my hand on some old copies here at my desk that I'm willing to mail (limit 1 per customer) to anyone who asks while supplies last.

I can get the address for anyone who wants to find out more or join MTC.

They report over 600 hams are members (including me) plus scads of non-hams, many of whom whacked a key for a living yesteryear. Occasionally, they will publish frequencies and times for CW (of course!) nets which tend toward American Morse but always switch back to International CW for guests. Frankly, I am astounded how quickly these OT's can switch between codes. A ham friend of mine had to learn Cyrillic (Russian) Morse Code in the Navy many years ago and still has trouble keeping it separate from International CW in his head. You may stumble across them on 40m some evening and wonder what language is being used. IDs are in International, but everything else is American. As Jeff points out, several of the characters have identical sounds to International CW, but quite different meanings. It's guaranteed to produce Head-Copy Constipation until you realize that it's not a code you are expected to know.

Regards,

-- Mike, WB4ZKA

**********End Included Message**********

So, if any of you see a `funny looking' Morse-type code on a
cereal box you'll know the cereal manufacturer was just
trying to be American. ;)

73 from Beautiful Hawaii,
Jeff NH6IL

>a driver's license to start the engine of a car in a showroom?

It will be a violation if he drives it onto the road. However, if a
non-ham keys a radio into a dummy load, I do not believe that would
be a violation.

10. Re: VTVMs? Anybody use these anymore?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-01 06:14:17 UTC
From: wrt@eskimo.com
Message-ID: <CwzD9E.GMw@eskimo.com>
Source record: 259243

Sure, the digitals are better, but the old-style VTVMs are pretty darn good too. I used 'em for many many years and they did fine. One thing I would recommend, though. Whatever tube they use in the meter driver section - probably a 12AU7 - replace it with a 6FQ7. The zero drift is far better with the 'FQ7, and the only change on the socket is for the filaments. The 12AU7 has two separate filaments where the 6FQ7 just has one. A few minutes with a tube manual will make it clear. The rest of the connections are identical. Calibration will have to be touched up a bit, but performance will be identical (except more stable).

Have fun!

Bill, W7LZP

: >>Works great - with FD off no feedback when you transmit. My friend has an
: >>FT-530 and nothing in the manual gives any clue about turning off full-duplex
: >>operation.

Are you crossband thru the 530 or thru a mobile? Here's what I know: with the
530 crossband rpt is enabled by setting up the freqs, pwr off; rpt&pwr on.
one-way (half-duplex) rpt is enabled by pwr off; rev-pwr on.

or you're thru a mobile, and you can receive the rpt on the ht but not
hit it. Say you're repeating to 147.24 using 446.10 for your link, program
it on the right side of the radio into memory, just like any other odd-offset
you would program, and it workd just fine.

hope this is helpful. it's 2:30cdt and i'm not quite at my finest.

One of my pages, http://www.wco.ftp.com/~msattler/ham-radio/ham.html,
has pointers to ham radio on the Web. For your reading pleasure I
enclose it here:

Following are pointers to Web resources pertaining to ham radio
(including pages of pointers to Web resources pertaining to ham radio
(which themselves...)). Please recommend others.

* Start with what seems the most complete: the acs.ncsu.edu ham page (and
pointers to other WWW Ham
pages).

* The Boston Amateur
Radio Club (``Linking People Worldwide'') maintains a file archive
of interest to hams, a page for the Ham Radio and More show, and pointers to other WWW Ham
pages.

* The K1AD
Brown University Radio Club provides information for people around the
campus, plus pointers to WWW Ham
pages. Here's a seeming mirror of that page. (At
least someone backs up :-)

* The W3EAX University
of
Maryland Club page.

* The Bradley University
ARC.

* The Stanford University ham page, their WWW Ham pages.

* The University of Wisconsin-Madison Badger Amateur Radio Society
W9YT page.

* The U.S. Navy Postgraduate School ARC, K6LY, and lots of
information about the annual happenings on the Monterey
Peninsula, California.

* The Columbia
University (New York City) ARC, pointers to other WWW
Ham pages.

* Short-wave
information.

* Description of the Space Shuttle - ham radio SAREX
experiments (directly from NASA itself).

* Callbooks: North
America, United
Kingdom.

* FTP servers: additionally, you can get ham software and
information from

* BARC

* Univ. of
Buffalo

* University of California at
San Diego

* American Radio
Relay League (ARRL) Info Server

>73, Fred, K4DII

Fred, many VHF rigs in the bad old days were screen grid modulated. The only
way that works is downwards from peak output. Thus it is configured to rest at
1/2 output voltage or 1/4 power. THis situation sounds a lot like what you'd
get when using screen grid modulation on a final amp. (It requires a HECK of
a lot less audio power. This is why it was used so often.)

```
Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.9 08/28/94 11:22:19
Changes: Moved from unomaha.edu to gonix.com

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to
Greater Omaha Public Access Unix, which was motivated by a desire to
seek a stable site for the Elmers List for some time to come. See my
signature below for the new addresses. My old E-mail addresses, at the
University of Nebraska at Omaha, will probably work for the foreseeable
future, but are not guaranteed.]

A Brief Historical Overview:
++++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked
Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
```

treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St.,

Newington, CT 06111 or via electronic mail addressed to
rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site
at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the
companion postings to this message, "Amateur Radio: Elmers Resource
Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]."
Since the list is cross-posted to rec.radio.amateur.misc,
rec.radio.info, rec.answers, and news.answers on the 1st of each month,
with an expiration date 6 weeks into the future, there should always be
a copy available at most news sites. Check your newsreader
documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP) from
the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the
latest copy may be obtained from the mailing-list gateway for that
newsgroup (along with many other informational articles about radio)
when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that
case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send E-mail
to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z

send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list/a-m
radio/ham-radio/elmers/list/n-z
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at rtfm.mit.edu (standard port 210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO-Unix tcp/ip and sendmail coming soon!

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

To contact: J. Angus PO Box 4425 Carson, CA 90749-4425 USA
Or Phone 1 (310) 324-6080 all day monday, 7 am - 10 am tuesday through friday, 7 pm - 11 pm tuesday through thursday.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

Rob Bellville N1NTE

rbellville@aol.com

PO Box 515
Millbury, MA 01527-0515

ATTENTION RADIO NEWCOMERS!

Are you interested in radio communications but don't have enough information? Do you have questions but no one to ask? Are you looking for a publication geared toward the novice radio enthusiast?

***** FIRST CONTACT *****

"First Contact" is a newly forming publication. An electronically distributed email newsletter via the Internet for the beginner. Here is a forum to get the information

you're craving. Get involved in this fascinating hobby!
Scanning, ham radio, shortwave listening, CB radio,
General Mobile Radio System (GMRS), etc. will all be
covered.

You input is essential to the success of this publication. I
need to know what you want to know and what subjects
you want covered in the newsletter. I will attempt to
publish on a monthly basis, possible bi-weekly if there is
enough interest.

The only "cost" on your part is to fill out a subscription form
completely (E-mail for a copy). A classified section is being
contemplated with a small fee to advertise. Hard copies
will be available to those without email access. Please
contact me for details.

Everyone is welcomed to subscribe whether you've never
turn on a radio or whether you're an old-timer. I am
looking for authors to contribute short articles on the
subjects you request.

So let's get "First Contact" off to a good start! Get your
radio information via email. Subscribe NOW!

* (508) 635-6300 NM1D AMPR: nm1d@nm1d.nh.usa.noam *
**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

National Technical Information Service (NTIS) or wanting other info on
callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a
little bit about day-to-day Unix operations and Unix installation :-)
I also have much experience with constructing email paths that will work
rather than bounce.

I also have a fair amount of experience in hardware/software interfacing
and machine control.

Scott Ehrlich, Amateur Radio Callsign: WY1Z
How to reach me: wy1z@neu.edu [Internet], wy1z@wa1phy.ma [Packet]
Boston ARC FTP archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html

I've played around with Mac and PC hardware, as well as dabbing a
little with DOS, UNIX, MacOS, with a tad of VMS operating systems.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

All ARRL bulletins are archived on the anonymous FTP site of
oak.oakland.edu in the Boston Amateur Radio Club FTP area:
/pub/hamradio/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: oak.oakland.edu:/pub/hamradio/arrl/infoserver/
Programs mentioned in QST are in
oak.oakland.edu:/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
oak.oakland.edu:/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list (KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)

fox-list (local Boston stuff - T-hunting)
qrp-l (QRP, or low power, radio, previously maintained by Bruce
Walker at think.com)
arrl-exam-list (amateur radio license examinations scheduled in the US and
in some foreign areas.)
arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page.

The URL is: http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Club also has a World Wide Web Home Page. The address is:
http://www.acs.oakland.edu/barc.html

You will need Lynx, WWW, or Mosaic to view them. Ask me for more details
about this.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers,
and, if possible, solutions. I plan to forward these to my contact at
the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want
to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business
SASE with 98 cents postage is appreciated. Electronic versions
available soon. Please specify the desired documents in your
correspondence.

The FCC has released the results of a telephone interference survey
just completed.

If you would like a copy of the survey, which includes a list of
telephone models checked, send an SASE with two units of first class
postage to the Technical Information Service at ARRL HQ. Alternatively,
you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

++

Ian Kluft KD6EUI PP-ASEL
ikluft@thunder.sbay.org (home) ikluft@oes.amdahl.com (work) Santa Clara, CA

Maintainer of rec.radio.amateur.misc and rec.radio.cb FAQ lists

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be
someone who has enthusiasm for hobbyist radio, experience with UseNet, and
the ability to work with the other editors. No single person can know
all the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is
written in PERL. So it would be a plus for volunteers to post the
FAQ to have PERL installed on their system and be able to use "cron"
or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
maintainers, as well as anyone with a sincere interest in helping
keep the rec.radio.amateur.* newsgroups the friendly and useful
forums they are today, is also available. To subscribe, send E-mail
to rra-wg-request@amdahl.com.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to

date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

This server is also for the exchange of general information relevant to all Amateur Related PBBS software packages available today.

Owner of the F6FBB Packet Bulletin Board System Mailing List.

The purpose of this list is to provide both sysops and networkers with tricks/tips/help as well as software updates for the F6FBB packet bulletin board system.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either bull-fwd or mars-list. An acknowledgement/welcome message should follow very shortly.

cmoore@cancun.rose.hp.com

I'm currently working on the following Unix and X-Windows applications
for ham radio:

Logger/Awards Tracker
Radio Remote Controller (for Icom, possibly others)

They are still in the works, but hope to have them done soon. I'm
also happy to answer questions about X-Windows in general to encourage
its widespread use in the ham community.

myers@fc.hp.com

Antennas, Novice/Tech instruction, batteries, power supplies, RFI, equip. testing/troubleshooting, FAQs, homebrewing. Basic theory questions also welcome.

My particular interest is in antennas and transmission lines, but I'm also more than willing to answer whatever I can in general radio theory, propagation, analog and digital electronics, etc.. (I'm a display engineer in "real life", have done my share of digital design, and have taught communication electronics at the local community college. I'm also active in some display and television standards activities.)

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all
types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I will
ship COD at additional postage costs.

UUCP: . . . !rwsys!lawton!red!terry
PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
221 SW Crystal Hills Drive, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed
learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy
Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations,
marketing adult and higher education and teaching amateur radio
courses.
- Research in adult learning theory, adult motivation and organizational
theory.
- Conducted a SAREX activity that involve seven communities, 21 schools
and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Peter Reynolds reynolds@stc.nato.int CompuServe: 100276,1340
voice: +31-70-314-2401 fax: +31-70-314-2111 radio: KE4BAD
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague, The Netherlands

I am very lucky in that I earn my living in radio communications, so my
expertise is fairly broad (but not focused on amateur techniques only):

Modulation types - FSK, PSK, MSK
Error control - various types of ARQ and FEC systems
RF - Antennas, HF propagation
Networking - TCP/IP over HF
Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is

drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In the future, an archive of files will be accessible by anonymous ftp or possibly by email. In the meantime, check the host ucsd.edu by anonymous ftp for AMSAT-related files. Consult your local guru for help on using anonymous ftp.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should
send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information.
This information may NOT be suitable in content for
transmission via amateur radio, so automatic reposting
of AMSAT-BB messages to packet radio BBS's is discouraged.
The purpose of this mailing list is to provide a forum
for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list.
Simply address your message to amsat-bb@amsat.org, and
it will be automatically forwarded to all subscribers
to the AMSAT-BB mailing list.

Editors of publications should ask permission of the
sender before publishing anything seen in AMSAT-BB
elsewhere, unless the posting was obviously a public
press release. However, posters should realize that
anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian
element sets for satellites of interest to radio amateurs.
Like the ANS bulletins, these messages are posted in a
form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should
send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will

usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous ftp as:

mipg.upenn.edu:/pub/yee/rptr010.Z

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to mipg.upenn.edu:/pub/yee/uploads or via email to yee@mipg.upenn.edu. The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

+ ATTENTION RADIO NEWCOMERS!
+
+ Are you interested in radio communications but don't have
+ enough information? Do you have questions but no one to
+ ask? Are you looking for a publication geared toward the
+ novice radio enthusiast?
+
+ ***** FIRST CONTACT *****
+
+ "First Contact" is a newly forming publication. An
+ electronically distributed email newsletter via the Internet
+ for the beginner. Here is a forum to get the information
```

+ you're craving. Get involved in this fascinating hobby!
+ Scanning, ham radio, shortwave listening, CB radio,
+ General Mobile Radio System (GMRS), etc. will all be
+ covered.
+
+ You input is essential to the success of this publication. I
+ need to know what you want to know and what subjects
+ you want covered in the newsletter. I will attempt to
+ publish on a monthly basis, possible bi-weekly if there is
+ enough interest.
+
+ The only "cost" on your part is to fill out a subscription form
+ completely (E-mail for a copy). A classified section is being
+ contemplated with a small fee to advertise. Hard copies
+ will be available to those without email access. Please
+ contact me for details.
+
+ Everyone is welcomed to subscribe whether you've never
+ turn on a radio or whether you're an old-timer. I am
+ looking for authors to contribute short articles on the
+ subjects you request.
+
+ So let's get "First Contact" off to a good start! Get your
+ radio information via email. Subscribe NOW!

+ ikluft@thunder.sbay.org (home) ikluft@oes.amdahl.com (work) Santa Clara, CA
+
+ Maintainer of rec.radio.amateur.misc and rec.radio.cb FAQ lists
+
+ Please direct all FAQ submissions, feedback, and administrivia to
+ hamradio-faq@kluft.com or cb-faq@kluft.com.
+
+ As with any volunteer effort, new volunteers are often needed. We need
+ new editors to post the above FAQ's. Preferably this should be
+ someone who has enthusiasm for hobbyist radio, experience with UseNet, and
+ the ability to work with the other editors. No single person can know

```
+ all the various aspects of these diverse hobbies so the editorial review
+ groups are intended to make a greater combination of experience.
+
+ The FAQ is currently posted with the AUTO-FAQ software, which is
+ written in PERL. So it would be a plus for volunteers to post the
+ FAQ to have PERL installed on their system and be able to use "cron"
+ or "at" so that postings can go unattended.
+
+ Anyone who wants to make their contribution to the Net as a volunteer
+ should contact one of the above administrivia addresses.
+
+ A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
+ maintainers, as well as anyone with a sincere interest in helping
+ keep the rec.radio.amateur.* newsgroups the friendly and useful
+ forums they are today, is also available. To subscribe, send E-mail

20. Sidebands on 2m

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-01 11:23:52 UTC
From: asirene@ntuvax.ntu.ac.sg
Message-ID: <1994Oct1.192352.1@ntuvax.ntu.ac.sg>
Source record: 259211
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi,

I have just acquired a IC-22A 2M transceiver and noticed that there
is a difference in the sideband used for receiving 144-146 and 146-148. Why
is this done, and is it critical? Thanks.

Does anyone know what the difference between the 144-146 version and
the 146-148 version is? Other than the difference in the sideband used?
Thanks.

73,
Daniel

There is pretty sizeable crowd on 2meter AM in easten massachusetts at night. I used to be a member, before I moved out to Washington State. The freq was 145.72, I believe. This was in the experimental portion of the band. (I can't remember correctly so don't shoot if I am wrong).

I used a National NC173 reciever with a Heathkit 2meter recieve converter. (an older unit). For the TX, I used a TX62 xmitter. We used a two meter halo for the antenna. Was alot of fun.

In later years his call was W8CAJ, and after he moved to Arizona In 1956, his call became W&
W7GEZ. His origin call sign was a W8 call sign with two letters. Can you help me or tell me how I might be able to find out what his original call might have been. His name was Charles N. Page and he lived in Columbus, Oh. until 1956, when he moved to Phoenix.
Thanks for any help that you might offer.

< stuff zapped >

The only place I know to find these is on an accessory cable
purchased from Kenwood or Yaesu. (Yaesu uses them on some of
their commercial rigs)

I replaced mine with Molex, 2-pole, .093"-pin connectors.
They are inexpensive, easy to work with, and highly reliable.
It is the first thing to be done to a new rig ... after making
sure it works, of course.

Sorry, no help on the Standard.

27. Hamtronics downconvertes for Pacsats ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-01 14:49:39 UTC
From: jmcleod@pacific.net
Message-ID: <Cx016r.922@pacific.net>
Source record: 259184

I have heard some bad comments about Hamtronics downconverters, and I'm not sure if it is as a result of snobbery, or that they are really not worth the time. I want to use one as the 70cm downlink on my pacsat setup. Any comments from experienced users ?

Thanks,
John Mcleod N6RCD

>
> 73,
>
> Paul, K4MSG (R.O.W.H. '76)
>

And herein lies the dilemma! On the one hand (HRH, July 1978) tells us that we are dealing with "... an instrument of torture ...", and on the other we have Paul initmating that it is a society with members. SO ... which is it?

All this being done by those fine amateurs with coded
licenses??? I thought the blame for ruining ham radio was the "No-code
Technicians". Maybe I won't get a Technician Plus license, we don't
seem to have problems like this on 2M.

31. Why is aviation COM VHF *amplitude* modulated?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-01 17:28:00 UTC
From: tim.marek@megasystem.com
Message-ID: <215.4241.1441.0NA70A38@megasystem.com>
Source record: 259203

Aviation uses AM instead of FM to avoid FMs "Capture Effect". On FM when 2 stations Xmit at once your reciever will lock to the loudest signal and ignore the other. On AM the 2 signals mi and create a hetrodyne (Beat Note) and alert the reciever to the presence of another signal. This way any weak signal requiring assistance stands a better chance of gaining attention whereas using FM his chances of being heard are gretly reduced. 73s from Reno, nv de Tim, NC7K...sk

Get an IBM PC/XT case 8-).. Seriously. Before, I could get one station on my TV, and one *LOCAL* radio staition (out of about five) with the computer on. With this case, I can get ABC, NBC, Fox, Iowa Public Television (oh boy..) .. still can't get CBS with it on, but hey, it's like 6 feet away from the computer, and CBS here is channel 2.. everything interferes with those below channel 7 for some reason 8-). On radio, I can get everything I can with the computer off, no noise at all..
Besides, it is really fun to have people go up to your computer say, "Wow, what a piece of sh*t" pratically, then turn it on and find out it's like a modern computer 8-). It looks really impressive too 8-).

The 3-Hr Ap Indices for 29 SEP 94 are: 10 6 18 8 5 5 3 4
Greater than 2 MeV Electron Fluence for 30 SEP is: 5.9E+07

SYNOPSIS OF ACTIVITY

Solar activity was at very low levels. Region 7784
(S03E70) was assigned today.

Solar activity forecast: solar activity is expected to be
at very low levels.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at quiet to unsettled levels.

STD: Geomagnetic activity is expected to begin increasing on
03 October in response to a sizable polar coronal hole
extension. The hole is well defined in Yohkoh x-ray imagery.
The western edge of the coronal hole began crossing the central
meridian today near N05. Refer to the boundary positions below
for details.

Event probabilities 01 oct-03 oct

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 oct-03 oct

A. Middle Latitudes
Active 10/10/20
Minor Storm 05/05/10
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/30
Minor Storm 05/05/15
Major-Severe Storm 01/01/01

HF propagation conditions were near-normal over all
regions. Near-normal propagation should continue until about
03 October when effects of a coronal hole could begin elevating
levels of geomagnetic and auroral activity, affecting the high
and polar latitude paths (and some night-sector middle latitude
paths).

STD ESTIMATED CORONAL HOLE BOUNDARY LOCATIONS DERIVED FROM YOHKOH X-RAYS

VALID AT 21:20UTC 29SEP94

"!H!" = Highly probable coronal hole locations.
"!W!" = Weak x-ray emissions (possible weak coronal holes).

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

But why just fix yourself on 7245 and 3870? There's a lot more
frequencies available than just those two (unless you're running
a crystal controlled xmtr!) Find a clear spot and call CQ.

Nets, contests, ragchewing *is* HF ham radio no matter what the
mode. Every net has a period where they will ask for new checkins -
do you wait until then or do you just barge in?

Contests are infrequent but when they occure either feel free to
join in the fun or try the WARC bands - no contesting on them.

A net isn't much fun if you can't hear *all* the participants so
that's why you'll find most folks running high power; if it's Ham C's
turn for a couple minute talk and he's so weak that not all the net
can copy him then that's not fair to the others.

There's plenty of folks running QRP or even QRPp (mostly CW); come
down to the CW subbands and you'll have plenty of folks to talk with.
Especially try to help out the novices on their subbands - it's always
a thrill to be someone's first CW contact!

73 from Beautiful Hawaii,
Jeff NH6IL

>I heard a unusual conversation on 3.975 MHz. A group called the I-bank
>net (eye???) were talking.

eye-bank. I recall part of the net's function is to help expedite the
movement of eyes used in transplants.

>1. What exactly is a net?

group of amateur radio stations in communications with each other. the eyebank
net is "formal". you can have "informal" nets as well

>2. They was group was talking about one of their member being silent
>key. I was under the impression they meant he was dead. I'm I right?

yes. SK (sent run together as ..._._) is used as a "I have nothing more for
you and don't plan to call you again" prosign as well. Lists of known SKs are
published in QST and notables will be in all the mags (such as when King
Hussein of Jordan dies - he's JY1 - or former Senator Barry Goldwater
(K7UGA)..and so on.)

>It means that you will get a Novice class license instead, if I am
>correct. I am a Tech No Code but carry a Novice license because all the
>Tech licenses for group 7 have been issued.
>Mike KC7FUM

ye gods.

no no no no no.

class of license is not determined by call sign format.

class of license is independant of format of call sign, except for initial assignment. you don't have to change your callsign unless you want to and you are eligable to do so.

you have a Technician license. there aren't any 1x3's (group C) so they find you one in the Novice Group D pile. you could keep your 2x3 and advance to extra with it.

and some of us have licenses from before that system started...but after they let you move around w/o changing the call to match the area...

as in me: WB9IVR. I have an extra class license, live in the 4th call district and have a call sign format that in today's rules would suggest novice (if you had to change your call everytime you upgraded or moved...)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 OCTOBER AND FORECAST FOR 02 OCTOBER - 04 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 30 Sep
Daily Proton Fluence >1 MeV: 3.3E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 5.9E+07 (normal)
X-ray background: A2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Oct 03 Oct 04 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Oct: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 30 Sep
Learmonth 5 3211 1111
Fredericksburg 3 5
Planetary 3 5

Observed Kp for 30 Sep: 2222 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Oct 10 Quiet to unsettled
03 Oct 10 Quiet to unsettled
04 Oct 20 Unsettled to active
COMMENT: Minor storm levels are expected 4-5 October due to coronal
hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
01 Oct normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Oct normal normal fair
03 Oct normal normal fair
04 Oct normal fair poor
HF Comms are expected to be degraded during interval 4-5
October, particularly at high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
01 Oct 26 near predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Oct 25 Near predicted monthly values
03 Oct 25 Near predicted monthly values
04 Oct 20 Near predicted monthly values
COMMENT: Degraded HF comms expected 5-6 October due to anticipated
coronal hole induced disturbance. Ionospheric response to anticipated
magnetic activity may be stronger during this rotation due to change of season.

: > they can talk on the radio. What do you think?

I'm lost! What's the big deal? I have been buying radios for 30 years
and I have never had anyone,(ham dealer, RS, hamfest seller, etc..)
ask me for a license before they would sell me a radio...

I agree that leaving one laying around so that any boob can kerchunk
the local repeater is a nuisance.. After all, there are enough
licensed boobs already out there kerchunking the repeater. But, a
polite suggestion that the repeater owner is not fond of such
practices might have solved the problem, it seems to me.

You don't have to have ham license to sell or buy radios..
You don't have to know anything about FCC regulations to sell or buy
radios. I am not aware of any big problem with unlicensed operation
on the 2 meter band.. So, what's the point?

If you don't like Radio Shack products, policies, or employees; just
don't go in there..

73,

Larry, KQ4BY

44. Re: Courtesy In Amateur Radio

Newsgroup: rec.radio.amateur.misc

Just my $.02 about what i've read in these posts:

1. On 2m and 73cm I state that I am monitoring or I do my best to respond to a ham who is monitoring as well. I am not insecure about responding to hams I don't know - I actually like talking to people who I don't know.

2. As far as courtesy: There are a few lids on 2m in this area. They cut in on good QSOs that hams are having. Having an informal net is onething (o.k. in my book) but these guys just but in. An example, I was having a QSO with our club president when one of the lids broke in. He had something to tell the president relating to club business. That was ok, but as soon as he was finished with club business, he started talking about bacon and chicken prices and where to get the best buys - totally unrelated to our conversation. Next his buddy starts in and they continue their chat about food prices. After about 5 minutes they sign off and the club president asked if I was still there. He wasn't happy and he could see that I was irritated.

Most amateurs i've talked with have been polite but there are the lids out there that irritate us all.

46. Where to find 1.2 gig rig?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-02 00:58:14 UTC
From: jdc3538@ultb.isc.rit.edu
Message-ID: <1994Oct2.005814.12733@ultb.isc.rit.edu>
Source record: 259183

OK, 1.2 gig HT's work fine. But who makes them? Are there any transverters from HF or 2-meters? 1.2 gig equipment is mighty scarce around here (Rochester, NY). Apparently what little stuff there is circulates around the local VHF club (a great way to get other people into it).

: a driver's license to start the engine of a car in a showroom?

Yes, when you key the HT (as a non-licensed individual) you violate
FCC rules...you actually transmit and that transmission extends
to wherever propogation may permit at the time.

In contrast, anyone can start a motor vehicle and drive it on private
property and not be in violation of state motor vehicle laws at all.
You only need a drivers license to operate a motor vehicle on public
roadways (and private property if the owners want to extend enforcement
of the state regulations to their parking lots as is often done with
private malls).

>
>Thanks,
>John Mcleod N6RCD

I started out in Satellites (RS 10) with a Yaesu FT101E, a FT221
2 meter all mode and a Hamtronics Downconverter to bring 440 to 10m
to the Yaesu. The converter was relatively easy to construct, and
worked well for satellites. Good luck!

Mark

At a contest site I was at, (W0KEA's) they used a 2m SSB rig as one of the IFs and it somehow mixed up to 1.2GHz. He build the transverter himself, but I don't think he would suggest it to you: he was laughing that he was down to something like "only $128 per QSO!"

I also though the Yeasu rig we were using has 1.2 on it... lemme look through my catalogs... Ah, here it is. The FT-736R ($2100 at HRO) can be modified with a little module to go to 1.2GHz. We didn't have the module, and that's why we were using the jury-rigged thing.

This is just my two cents on the TX-STOP function:

I finally got my license, and yet I still use the TX-STOP function. I use it so I don't accitdently key up everytime I nudge the radio wrong. Also, when someone asks to see my radio, I always lock it so they don't key it up and start yelling, "Ten-Four Little Buddy" into the mic.

Already figured out, by Jerry Pournelle and others. You take a satellite orbiting at geosynchronous altitude, and lower a rope. In order to keep the satellite in balance, you extend a rope the other way (maintaining center of gravity at geosynchronous altitude). If the rope is strong enough, you would be able to extend it all the way to the surface of the earth. (When this idea was first proposed, in the late '70s, the required tensile strength was 3-10x greater than the high-tech materials of the day.) 23,000+ mile tower high enough for you?

...phil

obHam: HTX-202 can put out more than 7 watts if it has a beefy enough power supply.

The ARRL releases a list of what call signs have been allocated, on a monthly basis. I believe they get it directly from the FCC. I have seen it posted both here, Compuserve, and packet, as well as QST.

Thus, what you are asking for already exists.

56. Daily Summary of Solar Geophysical Activity for 01 October

Greater than 2 MeV Electron Fluence value is not available.

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares occurred during the
period.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet levels for the
past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet during the first day. Field activity is
expected to increase to unsettled to active levels during the
second day as coronal hole effects begin. Active conditions are
expected during the final day with periods of minor to major
storming possible during local nighttimes, especially at high
latitudes.

STD: The above-noted coronal hole appears to have increased in
east-west areal extent compared to the last solar rotation and
might therefore remain geoeffective for 4 or 5 days.

Event probabilities 02 oct-04 oct

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 02 oct-04 oct

A. Middle Latitudes
Active 05/30/40
Minor Storm 01/20/30
Major-Severe Storm 01/05/10

B. High Latitudes
Active 10/30/35
Minor Storm 05/25/35
Major-Severe Storm 01/10/15

HF propagation conditions have been near-normal over
all regions. Near-normal conditions should continue until
04 October when effects of the coronal hole noted previously
begins to affect propagation. HF propagation is expected to
become mildly degraded on 03 October over high and polar
latitude paths, and more heavily degraded on 04 and 05 October.
Middle latitude paths should see minor signal degradation on
04 and 05 October, particularly on night-crossing circuits.
Recurrence suggests periods of moderate auroral activity should
occur within expanded auroral ovals. The expanded ovals should
influence night-crossing middle latitude circuits with
increased fading, multipathing, and absorption. The increased
east-west size of the coronal hole suggests the period of
reduced propagation quality could continue for 4 or 5 days,
possibly until the 7th or 8th of October.

Uncorrellated: 0 0 0 0 0 0 0 0 004 (100.0)

Total Events: 004 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

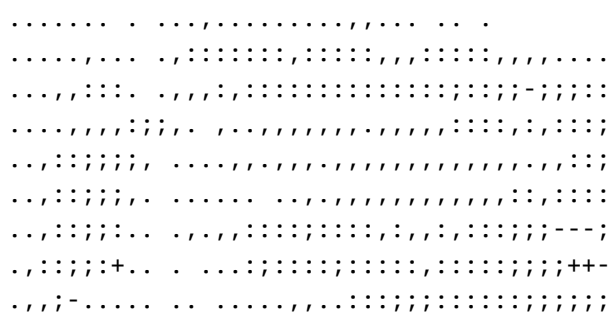
Acronyms used to identify sweeps and optical phenomena include:

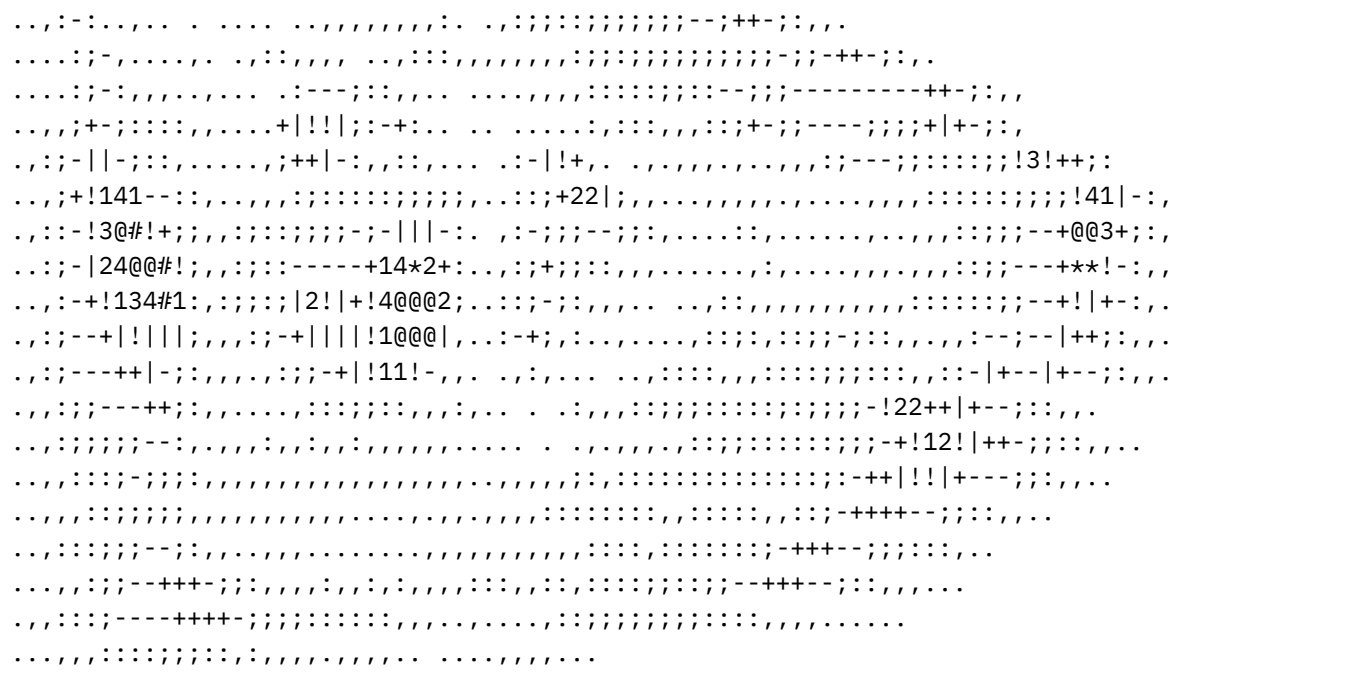
II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: YOHKOH FULL-DISK X-RAY IMAGE
---

30 September 1994, 21:40 UTC

North





South

KEY: East and west limbs are to the left and right respectively. Emission strength, from minimum to maximum are coded in the following way:

[space] . , : ; - + | ! 1 2 3 4 * # @

Units used are arbitrary, for illustrative purposes. Get "showasc.zip" from "pub/solar/Software" at the anonymous FTP site: ftp.uleth.ca (IP # 142.66.3.29) to view these images on VGA screens. Remove all but the image data before typing "showasc filename".

60. Re: Why is aviation COM VHF *amplitude* modulated?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-02 04:53:14 UTC
From: linley@netcom.com
Message-ID: <linleyCx148q.331@netcom.com>
Source record: 259197

Does anyone know why the Airline telephones (849-851/894-896MHz) use AM?
These air phones are relatively new and yet use AM. Was this done just to
'go with the flow' of all aircraft radio operating in AM? Or was there
some other reason?

IMHO Bob's posting was probably of general interest to most readers of the groups to which it was posted, and as such was within the usage guidelines for those groups. Furthermore, Bob is one of a very small handful of people whose postings to the "rec.radio" groups are of consistently high quality; check out his monthly scanner FAQ in "rec.radio.info" as an example.

If I may be so bold as to offer a bit of friendly advice, take care when flaming the folks who raise the S/N ratio in these groups lest you find the flamethrowers taking aim at you....

It was pretty commercial, although I doubt if his "day job", but an outgrowth of his hobby work. I also believe that Parnass has contributed MUCH more then his share to all of these groups, and it is an informative posting, so let it be. If all commercials were as informative and cogent, we'd not object to them, in general.

Mike....

Congratulations.... Welcome to the club... The next several weeks
will seem like a lifetime while waiting for the mail, but, if your smart,
you'll keep working for an upgrade. It will keep you interested in the hobby
and help the time to pass. I passed the requirements for General on a
Saturday and received my Tech+ ticket two days later on Monday. That was
quite a thrill ! I was kind of lucky but unlucky... It took 13 weeks for my
original ticket to arrive. It made me real anxious, but, studying for
General kept me busy... I was listening to CW tapes every day on my way to
work and back...

Happy Hamming...

Message-ID: <36mdek$r3b@dolphin.phoenix.net>
Source record: 259214

Near Outer Space Transportation System (NOSTS-1)
Balloon Launch - Clear Lake Amateur Radio Club
Sunday - October 9, 1994

Near Outer Space Transportation System utilizing a 12 foot diameter helium balloon as the launch vehicle. NOSTS-1 is an amateur radio experiment which will carry a various payloads in a package weighing less than 6 pounds. All interested hams are invited to participate.

The payload consists of:

* 2 meter packet on 145.75 MHz simplex - the node name for digipeating is NOSTS-1, the mailbox callsign is KJ5MX-6, the beacon IDs as KJ5MX-3.

* 10 meter voice beacon on 28.322 MHz Double Side-Band with an ID interval of 33 seconds

* Beacon on 29.420 MHz sending "CW" beeps that correspond directly to the outside temperature. At 70 degrees Fahrenheit the beep rate is approximately 200/min. To calculate temperature from beep rate the formula: Temp(degrees F) = [0.56853 X (Beep rate)] - 38
The antenna for this device is a 2 meter dipole cut to enhance the 5th harmonic at 147.10 MHz for direction finding purposes.

* Beacon on 224.72 MHz for direction finding purposes only.

* Potential secondary payloads may include a 10 GHz gigaplexer beacon and a 2 meter uplink (147.435 MHz), 70 cm downlink (440.95 MHz) FM repeater. Final announcements on these payloads will be made on launch day.

The Clear Lake Amateur Radio Club Balloon Launch Team wishes to thank Andy MacAllister, WA5ZIB and members of the South Texas Balloon Launch Team for assistance, advice, and use of 220 MHz beacon, 29.420 MHz fireball transmitter for this launch.

An informal simultaneous HF (7.155 Mhz or up for QRM) and UHF (442.750 SE Houston | 444.275 MHz NW Houston repeaters) net will be held at 7PM on Saturday October 8th for final updates. The 40 meter net on the same frequency will be active immediately before and during the flight.

The lauch site will be west of the Houston area and the direction of flight will be from west to east. Coverage may extend several states on some modes. Reception reports including frequency, time, and YOUR location are encouraged.

: I need to replace the antenna on my house. Should I shell out $50 for the
: standard multi-element array type or should I build a super-duper one?
: I'm not up on my RF antenna theory so any pointers to construction projects,
: texts, etc. would be appreciated.

Look up the "LOG-PERIODIC ANTENNA" that is what the standard TV antenna is.
A log periodic antenna is a series of dipoles for different frequencies,
with the feed alternately fed. Meaning that the is crossed over left to
right. And don't forget, the spacing is very important too.

Good luck.

74. Converting Motorola Pulsars to 2m

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-02 16:41:58 UTC
From: mwgordon@solaria.mil.wi.us
Message-ID: <2UOZkaQ5sIMC069yn@solaria.mil.wi.us>
Source record: 259227

A friend of mine recently picked up 2 Motorola Pulsars at a fest. These units are the VHF pre-cellular mobile phones that operated in the major cities. Since these units are full duplex (with duplexers, not SAW filters) and have an output of around 30 watts, they would make excellent mobile/special event repeaters.

Does anyone have any info on converting these units to 2m repeaters? I don't think that the RF details would be that difficult, but what about disabling the "brains" that were used to make it a phone? (ie. dialing, selective calling for ringing, etc)

I would not need to have them on the typical .6 mhz splits, which could cause some difficulty with desense. In fact, I'm looking at using one for our Civil Air Patrol search and rescue team which runs 143 mhz inputs and 148 / 149 mhz outputs. (And yes, CAP can use modified commercial and/or HAM equipment if it passes inspection on signal quality, interference, etc.)

Of course, I can come up with the typical repeater controller circuitry for IDing, timeouts, etc.

Any help you give me on this would be GREATLY appreciated.

Mike Gordon N9LOI mwgordon@solaria.mil.wi.us

PS: Please help support your local Civil Air Patrol unit. CAP searches for downed planes and missing persons, as well as providing disaster relief during floods, tornadoes, etc. CAP also has youth programs that teach cadets respect, honor and self-worth. These lessons help out cadets become highly successful students and leaders.

Although the Civil Air Patrol is the official auxiliary of the Air Force, we are run as a non-profit corporation similar to the Red Cross. While we do get some money from the Air Force, we really depend on donations from our members and the public to help continue our work.

For information on how to help or join Civil Air Patrol, please email me at: mwgordon@solaria.mil.wi.us

: Does anyone know why the Airline telephones (849-851/894-896MHz) use AM?
: These air phones are relatively new and yet use AM. Was this done just to
: 'go with the flow' of all aircraft radio operating in AM? Or was there
: some other reason?

I'd speculate (from an earlier post in this thread) that it's due to
the characteristics of weak-signal AM vs. weak-signal FM - and not the
capture effect. An AM signal can be usable when it's right down there in
the atmospherics, while an FM signal must be greater in amplitude than
the atmospherics to be usable.

Does anyone have a definitive answer?

It all depends on the general reception in your area. Are you in a Metro area? If the signals are generally strong, I would just build a small dipole or hang a little wire off the TV connector. That is all it takes down here, no $50 needed. It always amuses me to build a small folded dipole for FM and beat the reception of the big, fancy Radio Shack FM antennas costing $30 and more. BUT, if you are in a fringe area, I would probably go and buy a commercial antenna...and a small rotor.

Congratulations! Welcome to ham radio!

Don't worry, you'll get a call sign from group "D". This will be a 2x3
call which you will keep until you upgrade to Advanced or Extra.

Or, maybe someday, the FCC will begin reissuing old, no longer assigned,
calls and you'll be able to change .... if you'd want to.

Again, CONGRATS!!!!!!

SB SAT @ AMSAT $ANS-274.01
IARU APPOINTS SATELLITE ADVISOR

HR AMSAT NEWS SERVICE BULLETIN 274.01 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 1, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-274.01

IARU Appoints Satellite Adviser

In a news release dated 26-SEP-94, the International Amateur Radio Union (IARU) announced that it has appointed Hans van de Groenendaal (ZS5AKV) to the newly created post of IARU Satellite Adviser. According to the IARU release, the principle task of this position will be to keep the IARU Administrative Council informed on all technical and operational aspects of the Amateur Radio Satellite Service in order to enable the Council to adopt appropriate policies to advance the interest of the Amateur Satellite Service before the International Telecommunication Union (ITU) and regional telecommunications agencies.

The IARU release noted that ZS5AKV, as past President of Southern African AMSAT and an Executive Committee member of IARU Region 1, brings many years of satellite related experience to this appointment. The IARU release further noted that the appointment is a direct result of recommendations made to the IARU Administrative Council by the IARU Ad Hoc Satellite Advisory Committee which took up the interim report at the recently completed IARU Administrative Committee meeting in Singapore. The IARU release commented that this action is "tangible proof" of IARU's interest and involvement in the Amateur Satellite Service.

The release continued by citing IARU's many year role in protecting the Amateur Satellite Service, in particular its work during the 1979 World Administrative Radio Conference which led to most of the present Amateur Satellite Service frequency allocations.

The IARU release also stated that the "exponential development of new technologies and ever increasing complexity of the Regulatory Agencies, the IARU Administrative Council deemed it necessary to involve itself closer with the Amateur Satellite Service in order to represent it effectively on a coordinated world-wide basis while cementing its relationship with the AMSAT and other Amateur Radio Satellite groups."

In the release the IARU said that in his new capacity and by the powers delegated to him by the IARU, ZS5AKV will have the task of appointing someone to the post of IARU Satellite Frequency Coordinator.

The IARU said that ZS5AKV is now soliciting nominations for volunteers willing to serve the function of IARU Satellite Frequency Coordinator. Such nominations should be sent to him by FAX at +27-31-765-6456 or via INTERNET at amsat@uctvax.uct.ac.za before 31-OCT-94. Hans said that each nomination should include a comprehensive summary of the nominee's background and qualifications. He stated that it is his intention to discuss the various nominations with major AMSAT groups in order to seek their recommendations. He underscored the importance of finding the right person to be appointed to this very important job.

Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Blon/Blat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimize the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.
==========
[G3RUH/DB2OS/VK5AGR]

FO-20: FO-20 has been switched back into the analog mode as of 14:30 UTC 28-SEP-94. The command station announced that "mailbox software ran away" and there is a malfunction known as UVC (Under Voltage Control) has been confirmed by command station. FO-20 will be staying in its analog mode until 10-OCT-94. [JJ1WTK]

MIR: German Astronaut Dr. Ulf Merbold will be QRV aboard the space station MIR signing DP3MIR during the ESA EUROMIR 94 mission starting 03-OCT-1994. In order to give actual information regarding the mission to as many radio amateurs and SWLs as possible, he will use the digital voice memory of MIR's HAM RADIO rig designed and built by Thomas Kieselbach (DL2MDE). Thomas made an arrangement with Ulf Merbold, DP3MIR, to load actual spoken reports into the digital memory frequently, as time permits however, probably every 2-3 days. The reports in English and German will then be retransmitted auto-matically during the consecutive orbits at 145.550 Mhz (FM) in regular time

intervals. Ulf Merbold will stay aboard MIR for 30 days. [DF5DP]

RS-10: WA6ARA reports that RS-10 is operating well with a good mix of SSB and CW. Orbit times are great for late evenings to the East and with early evening passes to the West. [WA6ARA]

RS-12: WA6ARA reports that Mode-K is alive and very well. RS-12 is just starting to appear in late evenings. Over the next month the passes will be great for evening passes. [WA6ARA]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

: for 1/2" CATV hardline? Pointing me to a reference would be ok too. I
: believe that you can use a barrel connector, a copper plubing fitting, and
: whatever to do this, but would like the steps of how its been done.
: 73 and Thanks de KA3PLS

We'll, iv'e done it with just those items. get a copper reducer, and saw
cut some notches in it so it can be clamped down. Strip the cable so
there is enough center conducter sticking out to fit into the barrel.Put
the barrel in one end of the fitting, and the cable in the other. Use
small hose clamps to tighten everything down. If it's going to be
outside, weatherproof the hell out of it. It ai'nt pretty but if done
carefully, it works.

Ever occur to you that two stations transmitting an AM signal at the same time produce a hetrodyne squeal and that because of the capture effect of FM a squeal may not always be there? Helps a controller out to know that more than one aircraft may be calling him and one may be an emergency or require expeditious handling (doesn't always occur on 121.5 or 243.0).

Works for me.

SB DX @ ALLBBS $OPDX.177
Ohio/Penn DX Bulletin No. 177

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 177
BID: $OPDX.177
October 3, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, K4CEF & Southeastern Cluster Group, F1RQB, F5SHQ, G3NYY, G8XFT, G4YRR, AH0W/OH2LVG, JH2PDS/1, Japan DX News, ON6TT, AD1C, K1VWL, WB1HBB, AA2SZ, K4ADK, W6OTC, K7DBV, N7QQ and VE3UOL for the following DX information.

8R, GUYANA. Eddie/G0AZT and Glenn/W6OTC will be in 8R-land on October 13th to participate in the JARTS WW RTTY Contest (Oct. 15-16) as 8R1TT. They will be active 80-10 meters before and during the contest. After the contest, Eddie will operate from Laguan Island (SA-068) in the Essequibo River until October 20. QSL all contacts with 8R1TT to Eddie Schneider, POB 5194, Richmond, CA 94805.

9X, RWANDA. Hartmut, 9X5HG, has apparently returned to Rwanda and is again active. The Ohio/Penn Network shows he as been back as early as September 20th but with little activity from him. Several in the Southeastern Cluster Group worked him around 0330Z on October 1st on 7028 khz. His signal was reported to be good, and he called several in the pileup by name, indicating that his computer logging still works.

C6A, BAHAMAS. Walt/G3NYY, Tim/G4VXE and Dave/WG3I will be active from Nassau, New Providence Island between December 10 and December 18, 1994. Operation will be on 160-10m including the WARC bands and will be mainly on CW, with some SSB. Calls will be C6A/home call. QSL via home call, direct or via bureau.

ET, ETHIOPIA. ET3BT has been showing up on the 14226 DX Net almost every day. Look for ET3BT between 1800 and 2230z.

FJ, ST. BARTHELEMY. Stefen/AA2SZ, Charles/N2HIG, Howard/K2MME, Bob/N0IMH, Laurent/F6GOX and Adolphe/FJ5AB will be operating in the CQ WW DX SSB Contest as a Multi/Multi entry signing FJ5AB. The group will be there from October 26th through November 3rd, and also operate before and after

the contest using FJ/homecalls on all bands, CW, SSB and RTTY.

FM, MARTINIQUE. Doug, N3ADL, will be operating from here October 26th through November 2nd (plus take part in CQWW DX SSB Contest), using the special callsign of TO5MM. Expect SSB, RTTY and possible satellite operations. Activity will be on all bands 160-10 meters. QSL via CBA, enclosing SASE etc.

FO, FRENCH POLYNESIA. John, K1VWL, will be active from Moorea Island (IOTA OC-046), November 22nd through December 3rd. There was no mention of what his callsign will be, but he plans to be active in the CQWW DX CW Contest (Nov. 26-27). Outside the contest, he plans to be active on 1832, 3523, 7023 and 10103 kHz. QSL via his CBA.

GU, GUERNSEY. F6FGN and F5SHQ will be active from October 28th to November 4th. Both operators will sign GU/callsign and be active in the CQWW DX SSB Contest. Activity will be on 80-10 meters CW/SSB. QSL to: P.O. BOX 14, 44521 Oudon, France.

OT, BELGIUM. Look for OT4T as a Multi/Single entry in the upcoming CQWW SSB Contest. The following operators will be operating from ON4UN's QTH: ON4WW, ON4UN, DL1SBR, DJ4AX, DL5XX, DK1FW and ON6TT (assisted by a vast group of spotters). Unfortunately, F6EXV, who helped this group of operators to be #1 in Europe as Multi/Single entry last year, is still in Africa and unable to join them this year. To receive a multi-colored QSL card, QSL via ON4UN.

PACIFIC DXPEDITION/HOLIDAY DELAYED AGAIN. Masa, JE1DXC (A35XC), is still having problems with airplane reservations which continues to delay his departure for 3D2, T30, and T2. He plans to be active from the Pacific for the CQWW DX SSB Contest.

SV/A, MT. ATHOS. The Tokyo Packet Cluster reports Monk Apollo, SV2ASP/A seems to be pretty active on RTTY. They also report his signal was not very strong but fair via the long path. Look for him around 14083 kHz between 7000 and 7030z.

V4, ST. KITTS. The North Alabama DX Club will operate from St. Kitts in the CQWW SSB Contest in the multi-single category. The group will be signing V47WK and will be active from October 25 until November 1. Activity will be on WARC bands, RTTY and LOW-BANDS before and after the contest.

VP2E AND PJ7, ANGUILLA AND ST. MAARTEN. ARRL New England Division Vice Director, Warren/WB1HBB, will be vacationing/operating (with the emphasis on vacationing) from Anguilla as VP2E/WB1HBB on October 18-20 and from St. Maarten as PJ7/WB1HBB from October 21 through October 28th. Look for him on 14.263 (+/-) at 1230Z and again at 2100Z. QSL to his home call.

VP8CQJ, FALKLAND ISLANDS (UPDATE). As mentioned in OPDX.176, Jon/G8XFT will be active as VP8CQJ from Mt. Kent from October 18th until approximately February 20, 1995. Jon has now supplied OPDX with the following QSL route for VP8CQJ operation: Jon Carp (PLEASE NOTE: Jon -

NOT John), 9 Hawthorn Road, Gatley, SK8 4LX UK. Jon requests cards be sent DIRECT ONLY as no envelopes will be lodged with a bureau. Cards submitted without a green stamp or IRCs will be answered via the bureau.

XF3, COZUMEL ISLAND, MEXICO. Gene, K7DBV, will operate as XF3/K7DBV from Cozumel Island (IOTA NA-090) from November 22-29. He plans to be active in the CQWW DX CW Contest using low power to a wire antenna on all bands (80-10 meters), primarily CW (with some SSB outside contest). Also, check the regular IOTA frequencies on both modes. QSLs via CBA.

XF4, REVILLA GIGEDOS. An international team headed up by Victor Keller XE1VIC will activate Socorro Island (NA-30), October 31st through November 1st (including a multi-single entry in the CQWW/SSB Contest). The team will be signing XF4M and will be operating on all HF bands/modes including RTTY and RS-12. The team includes Frank R. Smith AH0W/OH2LVG, Andy Chesnokov UA3AB, Igor "Harry" Booklan RA3AUU, Gabriel Valdez XE2Z, Motoaki Saito JH1EDB, Ed Kritsky NT2X/RV7AA, Pepe Lozano XE2MX and Alfonso Belmar XE1ILH. This group feels they are the first to ever put on a contest effort from Revilla Gigedos as well as the first on 30 meters, CW. Actually, the first ever XF4 operation on 30 meters was XF4CI earlier this year. QSLs via JH1AJT.

ZF, CAYMAN ISLANDS. K4IIJ, W9NQ, KJ6HO, N6LL, N6DLU, N7QQ and others will sign ZF2JI in a Multi/Multi effort in the CQ WW SSB Contest. QSL ZF2JI via KG6AR. There will be activity before and after the contest. QSL ZF2NQ via W9NQ, ZF2LS via KJ6HO and ZF2VT via N7QQ.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. I started out in Satellites (RS 10) with a Yaesu FT101E, a FT221
2 meter all mode and a Hamtronics Downconverter to bring 440 to 10m
to the Yaesu. The converter was relatively easy to construct, and
worked well for satellites. Good luck!

Mark

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 OCTOBER AND FORECAST FOR 03 OCTOBER - 05 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 01 Oct
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Oct 04 Oct 05 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Oct: 76/14
COMMENT: X-ray background and fluence data not available.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet until 16UT, unsettled-active
thereafter.

Estimated Indices : A K Observed A Index 01 Oct
Learmonth 11 2222 2433
Fredericksburg 5 3
Planetary 8 3

Observed Kp for 01 Oct: 1111 0111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Oct 16 Unsettled to active
04 Oct 16 Active
05 Oct 25 Active to minor storm
COMMENT: IPS Geomagnetic Warning 5 was issued on 1 October and is
current for interval 4-6 October. A increase in activity was
observed in the field after around 16UT.This may be the coronal hole

sourced disturbance arriving earlier than expected.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Oct normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Oct normal fair poor
04 Oct normal fair poor
05 Oct fair poor poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
02 Oct 26 near predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
03 Oct 20 Near predicted monthly values
04 Oct 15 Near predicted monthly values
05 Oct 0 About 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 3 was issued on 2 October and
is current for interval 4-6 October. Degraded HF comms expected 5-6
October due to anticipated coronal holeinduced disturbance.

I'd love to see a 6m AM net also. Not because I have an AM only
rig, but because the 6m band can use the activity. Many of the
contemporary 6m rigs do have the ability to operate AM also (that's
certainly the case for my TS-690), so maybe someone can get something
going here and we can get it reported in QST and CQ also.

Gee, I'd also give me a chance to try out my old Gonset converter
(6m to AM broadcast band) also.

How about something like 50.150 that's 25KHz up from the regular
SSB calling frequency? Anyway, just an idea.

Let's put some of those old AM rigs to good use.

I tried to get a 6M AM net going here in the Phoenix area a while back but couldn't get any interest. My one-owner (me) Heath Sixer is all tuned up and ready to go. I can't remember the freq of the xtal but like someone else here said...it really doesn't matter much with the Sixer rcvr.

I also have a one-owner (me again) Knight T-60 that supposedly does 6M AM and a receiving converter built from the 1963 Handbook for 6M-to-20M that should still work. At least it did back then.

All I need is an antenna.

The Columbia University Amateur Radio Club (CUARC) has been operating as
W2AEE since 1933. Our first call sign was 2XM which was issued in 1913.
For more information on the club and other 'cool' ham stuff, point your
web viewer to: http://www.columbia.edu/~fuat/cuarc/

102. TM-733A.DOC (Release 2.0 10/1/94)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 02:41:00 UTC
From: n5ljv@uh.edu
Message-ID: <2OCT199421415175@elroy.uh.edu>
Source record: 259144
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Here's the updated TM-733A.DOC. It contains some new and interesting info.

Modifications, Undocumented Features, and Bugs for the Kenwood TM-733A.
Release 2.0 Updated October 1, 1994

Updates for Release 2.0 are identified by parenthetical statements.
There is also some new information sprinkled throughout the previous material
either to update it, to correct misinformation, or to be more specific.

This document is a compilation of Internet messages from
Steve Haehnichen KE6JGK and Brad Killebrew N5LJV, edited by Brad Killebrew.

Extended RF Modifications

Refer to diagram below. (Inserted into Release 2.0)

Remove power source from the radio.

Remove the display panel.

Remove the top cover the radio.

Face the front of the radio away from you.

Remove the speaker.

Looking from the back of the radio, the control board is vertically
mounted just behind the front panel wall (which can be removed easily
if better access is needed.)

Just to the right of a chip labeled XRU4066BCF and just to the left of
two green wires (B2 & B3 which are draped over the board to the rear) are
two zero-ohm SMT resistors, B0 and B1, marked "000".

Remove B0. (the one on the left - furthest from the green wires)

Taking it out might be a bit tricky. It's glued down for surface-mount
assembly. Be careful not to pull the trace from the board.

Perform a CPU reset by holding [MR] while turning on the radio.
It will then ask if it is "OK?" to reset, press [MR] again.

The ranges after modification are as follows:

Tx: 136-174 410-470
Rx: 118-174 300-470

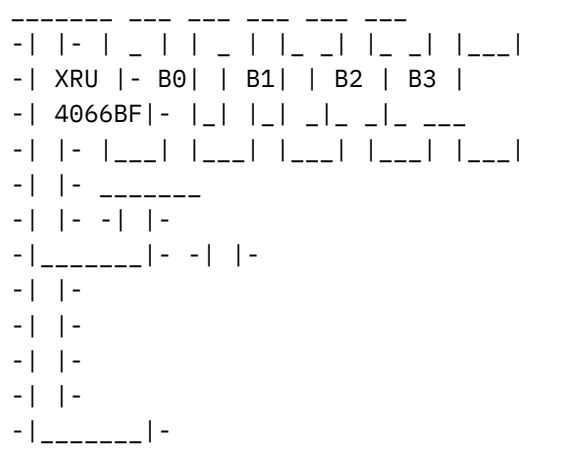
The cellular band is indeed missing.

ONLY Removing Jumper 1 (B2) is the MARS/CAP modification.

** Diagram of specified area on Control Board **

EDGE OF BOARD, viewed from the rear, looking toward front panel

Green jumper wires (B2, B3)



The jumpers are actually soldered on the other side of the board,
but the loops come up over the top and hang over the B0/B1 side.

B0=R414
B1=R412

Here's something interesting! According the Kenwood rep I spoke to,
performing this mod *does not* void your factory warranty. The same
goes for any Kenwood published service bulletin or modification info.
We are encouraged to perform the repairs ourselves to save them the
trouble and expence.

DTMF Remote via Microphone

The TM-733 is fully DTMF remotable via the microphone (documented).
The radio can also be externally DTMF controllable with an HT, but that
will be described later.

The DTMF control keys are exactly as shown on page 81 of the
manual. Note that the microphone is active all the time, so any
ambient DTMF tones near your mic will also change rig settings. This
includes tones coming in on the other band and out the speaker.

Cross Band Repeating

Cross band repeat isn't documented but comes ready from the factory. To enable cross band repeat from the front panel, first select a band by pressing BAND SELECT. Then, change the control to the other band by hitting [CONT SEL]. Next, press [F] for one second, then the "X" button (far right side). Decimals will appear between the Kilohertz digits, and the "ON" indicator will light momentarily. The microphone sequence to enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by turning on the radio with [LOW] pressed. They also recommend enabling the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater. For example, if you can receive a distant repeater with your HT, but have difficulty getting into it, you can use the TM-733 to boost your transmitted signal. To set this up, just omit the part where you "change the control to the other band by pressing [CONT SEL]." Doing this will setup the TM-733 to repeat your signal to the other band, but will not retransmit the distant station back to you. If this sounds ambiguous, play around with it a little and it will begin to make sense.

DTMF Paging and Squelch

The DTMF Paging & DTMF Squelch protocol (AAA*BBB) is compatible with the Yaesu 530 and all Kenwood radios supporting this.

DTMF Monitor

There are some serious bugs in the "DTMF Monitor" feature (Page 63: [PTT] + [DWN] + Power On). This feature supposedly lets you hear the DTMF tones you are transmitting. The first problem is that it only gives you a short tone from the internal speaker. This is not true to the transmitted tone that lasts as long as you hold the key. The much bigger problem is that it mixes the desired tone and the feedback tone resulting in an almost indecodable DTMF tone. Kenwood is aware of this bug.

(Updated information for Release 2.0):

Per Ricardo, a Kenwood technician, they are aware of this bug and are working on a fix. No details yet.

Front Panel

There are two undocumented icons on the display; one is the "heart" symbol. Anyone know what that's for? It could just be a spare. I noticed they used the odd "spade" symbol to indicate AM receive, so maybe these were last minute extras. Dunno..

From looking at the schematic, it seems that the only programmable memory is physically located in the detachable front-panel. I think this means that if I use my front-panel on someone else's radio, I get all my memories and settings. Anyone try this?

The whole front panel is connected to the rig by four wires (yep, including the volume/squelch pots.) According to the schematic, these are: power, ground, data in, and data out. I'm wondering how hard it would be to make a PC interface for this thing and replace the whole display and controls with a full-screen version. It wouldn't surprise me if many of the programming limits were also imposed by the front panel, and not the unit.

Wireless Cloning

The advertised but undocumented Wireless Clone function is described in App Note AAN-0008 which they will mail out on request. (Maybe if enough people ask for it, they will include all the functions in future instruction manuals.) In summary:

- Prepare the two radios for simplex operation on the same frequency.
- Turn both radios off
- Press [CALL]+[SHIFT] + [Pwr On].
- This should place the radios is clone mode with "CLonE" on the display.
- Press PTT on the "Master" radio momentarily. This will start sending the programming DTMF tones.
- After all data has been transferred, the display of all radios will read "End", indicating success.
- If the signal is interrupted or corrupted, the "Slave" displays will read "Err". Turn them off and try again.

Notes:

- Both the Master and Slave radios must have the same number of memory channels available for each band. Example: You can not clone a stock Master to a Slave with ME-1 memory expansion.
- You can not clone between different Kenwood radio models, even if they seem identical.

Be careful when using the clone feature. It has been known to wipe out or scramble memories on the master radio during or right after clone.

Bugs and Problems

To date, I have logged two trouble reports with Kenwood.

The first is the well-known problem with the transmitted PL (CTCSS) tone. The tones are filthy. They contain many harmonics and synthesis noise. I'm guessing this is because they are using 7-bits from the CPU and a resistor net (DAC) to synthesize the tone. The sound/intensity of the

noise depends on the actual frequency being generated. The PL tones also come out of the radio's speaker while transmitting. Weird, but not a problem.

The PL noise seems most messed up (on my radio) at 107.2 Hz, where the noise beats with the tone. Go simplex and ask someone to describe the noise to you, or listen carefully to your own speaker while transmitting. Some repeaters do a better job than others of hiding the noise for you.

(New information inserted into r2.0):

==========
Transmit PL Fix
==========

Kenwood just released a Service Bulletin to address the transmitted PL tone noise on the TM-733A. (Yeah!!) Call the Kenwood Service Dept. (1-310-639-7140) if you want a hardcopy. Here's a summary of the text. Use it at your own risk. If you are going to get into your radio with a hot iron, you should first get the real paper from Kenwood with the drawing.

Kenwood Service Bulletin #ASB-1060 2 Pages
Subject: TM-733A PL Tone Distortion August 30, 1994

Symptom:

Transmitted PL tones at the receiving station have a relatively high level of distortion. This is easily seen when the incoming signal is viewed on an oscilloscope.

Countermeasure:

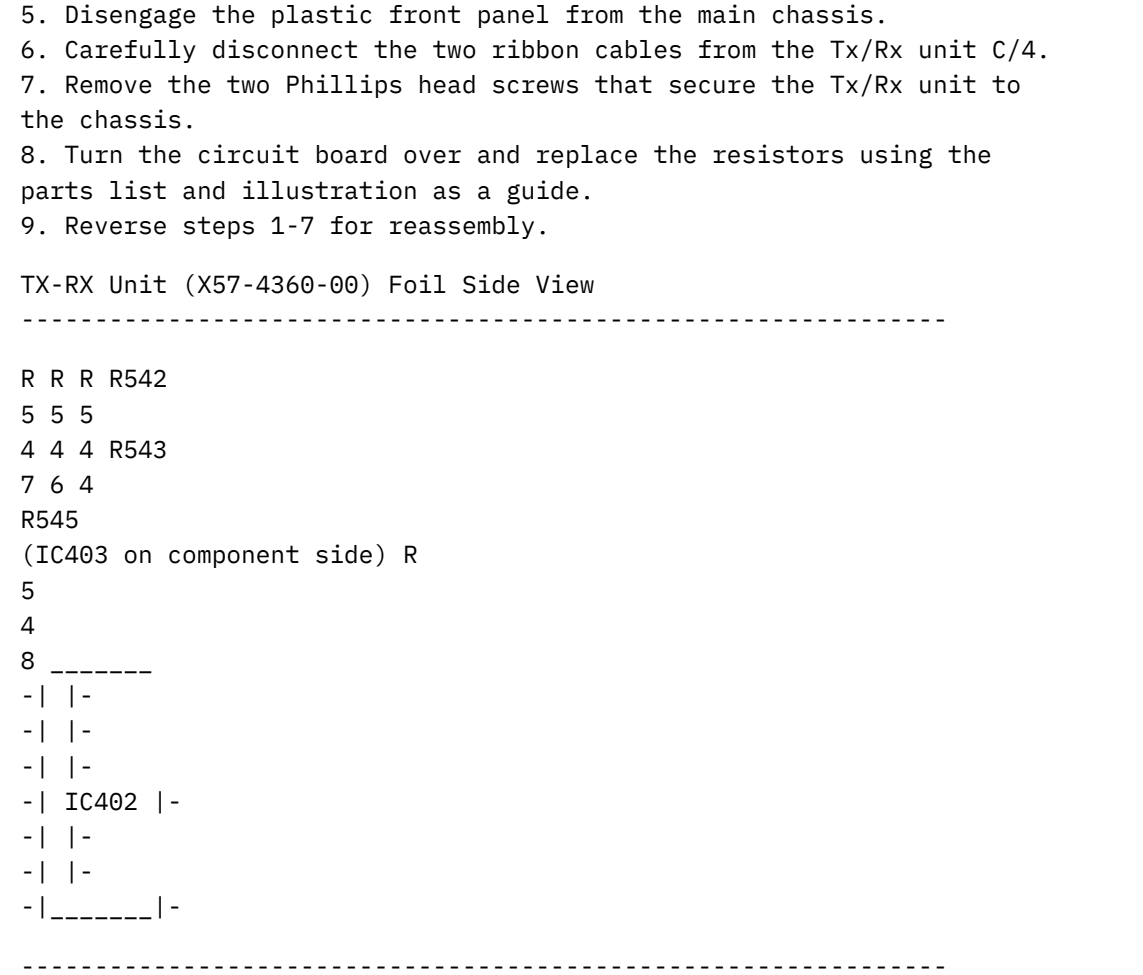
Change the value of the "Pull-up" resistors in the PL tone encoder circuit as shown in the accompanying chart and illustration. This reduces the distortion from around 9% to approximately 4%.

Part	OLD value	NEW value
R542	1.8k	2.7k
R543	1.8k	3.3k
R544	1.8k	4.7k
R545	1.8k	6.8k
R546	1.8k	10k
R547	1.8k	10k
R548	1.8k	10k

Procedure:
---
1. Disconnect the power cable, microphone and antenna's, etc.
2. Detach the front panel and set it aside.
3. Remove the top and bottom covers.
4. Remove the speaker and speaker mounting bracket.

5. Disengage the plastic front panel from the main chassis.
6. Carefully disconnect the two ribbon cables from the Tx/Rx unit C/4.
7. Remove the two Phillips head screws that secure the Tx/Rx unit to the chassis.
8. Turn the circuit board over and replace the resistors using the parts list and illustration as a guide.
9. Reverse steps 1-7 for reassembly.

TX-RX Unit (X57-4360-00) Foil Side View



Caution: This modification requires advanced surface mount soldering equipment that is rated for CMOS circuits. It also requires familiarity with advanced surface mount soldering techniques. If you do not have the proper equipment or knowledge do not attempt this modification yourself. Seek qualified assistance from your closest Kenwood Service Center (Long Beach, CA, or Virginia Beach, VA).

The Service Manual specifies a test for the PL. The technician is simply required to verify that any one PL tone is between 500 and 1500 Hz deviation. This is quite a wide tolerance range! The "standard" PL tone deviation should be 750 Hz. Twice that strong might be too strong and become audible. There are no trim-pots on the PL deviation, so I'm guessing that the deviation is pretty constant from radio to radio.

The dirty PL is definitely found on early models, but we have had many reports that the PL problem has been fixed in newer versions of the radio. If you purchased your radio after September 15, 1994, (or your serial number is greater than 55000000) it's a good chance that you may not have the PL problem.

The other problem concerns the DTMF Confirmation Tones. This feature is off by default (I wonder why :), while it seems pretty useful. To turn it on, press [PTT] + [Down] on the microphone while powering the radio on. This will generate short DTMF confirmation tones whenever you send DTMF over the air from the keypad. Unfortunately, it mangles the beginning of the outgoing DTMF tone! This is serious enough that most local repeaters can't detect the tone, or count it as two tones.

Get a receiver and listen to what you are sending out when the Confirmation tones are enabled. It sounds to me like they may be mixing the confirmation tone in with the real tone and getting some destructive interference. Just a guess, though.

I called a Kenwood technician (Ricardo) and worked with him on the phone to reproduce the problem there. So, as of today, this is a Known Problem, and they are looking into a fix. :-)

I am really curious to know what they would say if other folks called up and complained about this problem. Would they deny hearing about it, or would it really be a Known Problem? Might give some insight into the PL-noise denial thing anyway. :-)

Personally, I'm much more concerned about the noisy PL than the DTMF confirmation tones, since I can just shut those off and pretend that feature doesn't exist. If enough people call about the PL problem, maybe they will come out with a real fix and offer it under warranty to all the radios out there (since they're all pretty new). My guess is that it will involve a free TSU-8 tone decode module, but don't hold your breath. :-)

External DTMF Remote Control

The following procedure places the 733 in External DTMF Remote Control.

Note that this mode is different than DTMF Remote Mode. This mode concerns the control of the 733 with an HT, and not the microphone.

- Press Band Select and select the UHF band.
- Pick a UHF control frequency.
- Turn on the UHF DTSS function and select a tone sequence. (p. 89)
- Turn the UHF DTSS function back off.
- Press Band Select to move to the VHF band.
- Press [CONT SEL] to move control back to the UHF band.
- Turn OFF the radio, press and hold [CONT SEL] while turning the radio back on, then release [CONT SEL]. The S-meter scale and the DT indicators for the UHF band will begin flashing. The LOCK indicator will turn ON, and most front-panel keys (except PWR) will be disabled.
- To begin remote control, you should key the external radio and press the following key sequence: "Axxx#" where "xxx" is the preset DTSS code selected earlier.
- If the proper code is received by the 733, the beeper will sound and the DT indicator will stop flashing. The radio can now be

remotely controlled using the function chart below.
- To return to standby mode, press "A#" on the remote radio.
- To return the radio to normal operation, turn the radio off, then press and hold [CONT SEL] while turning the radio back on.

Refer to this chart when using the TM-733 in "External DTMF Control".

1 2 3 A
T.ALT ON TONE ON CTCSS ON ENTER

4 5 6 B
T.ALT OFF TONE OFF CTCSS OFF TONE SEL

7 8 9 C
CALL VFO MEMORY REPEATER ON

* 0 # D
DOWN POWER LEVEL UP REPEATER OFF

There are no "shifted" functions. Just one function per button.
After you hit "B" for TONE SELECT, press * or # to go up or down, and same is true when in VFO mode or in MEMORY mode.
Tones 7, 8, and 9 mimic the three buttons at the top of the 733 mic.

Pressing "C" places the radio in cross band repeat mode. You will recognize this because of the dots between Kilohertz digits.
After pressing "C", put the radio back into standby mode with "A#".
The 733 will now cross band repeat. To disable cross band repeat, place the radio back into the External DTMF Remote Control with "Axxx#".
If you can read through the lines, the 733 is capable of operating as a frequency agile remote base. Now Kenwood just needs a CW IDer!

Assembly Mode Test

In the TM-733 Service Manual, it describes a test mode that I haven't seen mentioned anywhere else. So, here's the scoop:

Entering Assembly Mode: [CALL] + [MUTE] + [Power On]
All LCD segments should come on. (To exit, power off.)

Press the [VFO] key. *This must always be done first*
The serial port is checked and "F" with "80" on the display indicates test passed. "1" or "2" means failure.

Different keys now show different displays, with [LOW], [SHIFT], [TONE], and [REV] also adjusting the backlight intensity.

Set the dials to minimum, then press the [MR] key. Each of the dials shows the digitized level.

This looks useful for checking all the keys and dials when you suspect a bad connection.

----------snip here and print----------

Kenwood TM-733A Quick Reference Guide by Brad Killebrew N5LJV

[#] PRESS A NUMBER, NOT THE POUND SIGN.
[KEY] PRESS AND RELEASE [KEY]
[KEY1]+[KEY2] PRESS AND HOLD [KEY1] DOWN, THEN PRESS [KEY2]
[KEY1],[KEY2] PRESS [KEY1] MOMENTARILY, THEN PRESS [KEY2]
[KEY]+[PWR] WITH POWER OFF, PRESS AND HOLD [KEY] THEN HIT [PWR]
[KEY1]+[KEY2]+[PWR] YOU GET THE IDEA.
[F] (1s) PRESS AND HOLD [F] FOR ONE SECOND. "F" THEN BLINKS.
[KEY] (1s) PRESS AND HOLD [KEY] FOR ONE SEOND.
[F],[KEY] (1s) PRESS [F] MOMENTARILY, THEN PRESS [KEY] FOR ONE SEC.

The following entries are listed in the order as they appear in the manual.

RECEIVE AUDIO SWITCHING [F] (1s) [CONT SEL]
AUTOMATIC SQUELCH [MHZ] + [PWR]
S-METER SQUELCH [F] (1s), [S.QSL]
SQUELCH HANG TIME [F]+[DIM]
RD OUTPUT SQUELCH CONTROL [TONE]+[PWR]
VHF+VHF OPERATION [F],[CONT SEL]
UHF+UHF OPERATION [F],[CONT SEL]
TRANSMIT BAND LOCK [F],[BAND SEL]
BLANKING A BAND DISPLAY [F] (1s), [BAND SEL]
VFO TUNING LIMITS [F]+[C.IN],(L.FRQ)[MR],(U.FRQ)[MR]
AM/FM MODE [MHZ] (1s)
FREQUENCY STEP SIZE [VFO],[F],[STEP]
1 MHZ/10 MHZ TUNING TOGGLE [VFO],[F]+[MHZ]
POWER OUTPUT [LOW]
TIME-OUT TIMER [F] (1s),[TOT]
WRITING MEMORY (SIMPLEX, DUPLEX) [F],(FREQ),[MR]
WRITING MEMORY (ODD SPLIT) (RX FRQ),[F],[MR] (1s),(TX FRQ)[MR]
MEMORY TO VFO TRANSFER [F],[VFO]
ERASING MEMORY CHANNELS [MR],[F]+[MR]
RECALLING MEMORY CALL CHANNEL [CALL]
CHANGING CALL CHANNEL (SIMPLEX,DUPLEX) [F],[C.IN]
CHANGING CALL CHANNEL (ODD SPLIT) (RX FR),[F],[C.IN] (1s),(TX FR)[CALL]
CHANNEL DISPLAY FUNCTION [REV]+[PRW]
INITIALIZE VFO ONE BAND [VFO]+[BAND SEL]+[PWR]
INITIALIZE VFO BOTH BANDS [VFO]+[PWR]
FULL RESET (MINUS PM) [MR]+[PWR],[F],[MR]
FULL RESET (PLUS PM) [MR]+[PWR],[MR]
STORING PROGRAMMABLE MEMORY [F],[PM],[#]
RECALLING PROGRAMMABLE MEMORY [PM],[#]
ERASING PROGRAMMABLE MEMORY [F]+[PM],[#],[MR]
CANCELLING AUTOMATIC OFFET [VFO]+[REV]+[PWR]
AUTOMATIC SIMPLEX CHECKER [REV] (1s)
SELECTING A CTCSS TONE FREQUENCY [F] (1s),[T.SEL],[UP]/[DOWN]

DTMF CONFIRMATION TONES [PTT]+[DWN]+[PWR]
STORING DTMF IN AUTOMATIC DIALER [F]+[CALL]+[PWR],{#'s},[PF],[#]
RECALLING STORED DTMF NUMBERS [F]+[CALL]+[PWR],[MR],[#]
TRANSMITTING STORED DTMF NUMBERS [PTT]+[PF],[#]
SCAN RESUME TOGLE (CO, TO) [F] (1s),[VFO]
MEMORY SCAN [MR] (1s)
LOCKING OUT MEMORY CHANNELS [MR],[F] (1s),[MR]
BAND SCAN [VFO] (1s)
PROGRAMMABLE BAND SCAN [F]+[VFO],(L.FRQ),[MR],(U.FRQ),[MR]

103. Pacificon 94 10/21-23/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 03:01:36 UTC
From: sam.lipson@ctobbs.com
Message-ID: <941003183008256@ctobbs.com>
Source record: 258979

PACIFICON 94 comes to the Concord Hilton Hotel on 21 - 23 October 1994.

This year's PACIFICON promises to be bigger and better than before. This year's theme, "HAM Radio - Your on-ramp to the Information Highway" will be apparent in much to be seen and to do.

There will be over 30 technical sessions (beginning at 2 pm Friday) covering topics such as EM fields and your health, personal safety, working with public safety agencies, fire safety for the home, the New HAM forum, APRS, computer control of HAM equipment, Beginning HF, radio control and amateur radio, QRP technology, Lasers, GPS, visual programming, antennas, SQUIRT - a new concept in satellites, Internet as well as the ARRL Forum.

The Saturday night banquet, which always sells out, will feature Steve Odum as speaker. The faire is either Prime Rib, Chicken or Vegetarian. Following the banquet, at the special hour of midnight, the mystic Wouff-Hong ceremony will be held. On special occasions, such as PACIFICON 94, there is an opportunity to join this select society. The only requirements are that you be a currently licensed amateur and be a member of the American Radio Relay League. You can join the ARRL at the convention. There is no cost to be come of member of the Wouff-Hong society and you will receive a handsome certificate suitable for framing.

The very popular swap meet will take place Saturday morning and there will be a T-hunt on Sunday. Other events include the Foot and Fanny, where you have the opportunity to send Morse code using a telegraph key that is about 20 times the normal size. You can send using your foot or ... well, you get the idea. Certificates will be awarded for those who can send simple words like "Mississippi" and "Tennessee."

VE exams will be held on a walk-in basis from 9:00 am to 1:00 pm both Saturday and Sunday. Bring your license, any CSCEs and a photo copy of each as well as two forms of ID.

PACIFICON 94 also gives you the opportunity to see the latest in amateur and amateur related equipment n the exhibit hall and in the hallways of the convention.

Also, just for showing up and depositing your ticket stub into the drum, you become eligible for one of many door prizes and the grand prize. This year's grand prize is a Yeasu FT-840 HF transceiver with power supply. The banquet grand prize is an Alinco DR600T dual band, VHF/UHF transceiver. Other grand prizes include a Yeasu FT11R 2 meter

handheld, a Kenwood TH78A dual band handheld, a Kenwood TH22AT 2 meter handheld, an ICOM T21 2 meter handheld, an ICOM W2A dual band handheld, an Alinco DJ-G1T 2 meter handheld and a Kantronics KAM Plus TNC.

For tickets, mail your request to (pick up at the door):
PACIFICON
P.O. Box 272613
Concord, CA 94527

Tickets are $3.00 in advance ($5.00 at the door)

For further information call (510) 932-6125.

Here in Santa Barbara in Southern California, there is an older gentlement who was a ham in the 20', and recently got back into radio, and he QSOs several times a week in American Morse. They are usually on weekday mornings around 7117 or thereabouts in the Novice band, around 9am local time. His call is AA6XT; I forget the call of the other station.

Listen for lots of dits! And the super long "dah" used for L and 0. It sounds quite a bit different than Continental CW.

Hi All,
I've tried and tried to subscribe to the TAPR lists and I have
followed the instructions to a 'T'. Can anyone help me out here?
Are the lists broken? Or is it manually done and someone possibly
on vacation or snoozing at the keyboard?

I'd like to receive the information dispursed on these lists...

Thanks for your help...

Dan

Well Ron, my amateur license is a year older than you and all of the above goes back further than that. The HF bands have been very much the same as ther are today and contests were always big. They used to be an excuse for club guys to get together, drink beer, and have an all around good outing. Oh, I've complained about them taking up the bands too, but what the heck, a lot of folks enjoy them, so I'll just do something else whle they're at it. I do have a life outside ham radio.

> I've had more fun on HF since I've learned CW at 20+ WPM. I gave up on

This comment is the real reason I replied. Particularly when I was new in the hobby, the biggest rock-crusher of a rig I ever then had was a Johnson Viking II (180 watts CW/135 AM DC input) and dipole antennas. I couldn't compete with the "California kilowatts" on AM, so I retreated to CW and never had so much fun. These guys that bash CW don't know what they're missing!

BTW, guess what I use on CW now... A Johnson Viking II no less!

Bill,

I have a Globe Scout 680 on the work bench right now being brought back to life. I used one back in about 1957 (bought new for $99.95) and worked 20-plus states on 6 meters with it. I hope to get it back on the air in a month or so, other priorities permitting of course.

Don't hold me to this, but I hear that 50.4 is the accepted AM calling frequency. (I already have an 8400 xtal for the Scout.) Stay in touch and maybe we can hook up on 6 meters this Fall.

Both Standard and Icom make dual-band 70cm/1.2GHz HTs that I've seen, the Standard being externally identical to their 2m/220MHz dual bander and the Icom being in the far more compact form factor used for many of their handheld rigs.

Well, _narrowband_ FM is really too narrow for the capture effect to work
very well. Listen to your local 2m repeater where all the jammers hang out.
That should give you more than your fill of hetrodyne squeal. If the capture
effect held true, you would only hear one jammer at a time. :) The
capture effect is only significant on wideband FM transmissions.

My local amateur radio club has accepted my offer of giving an Internet talk and demonstration at their next monthly meeting.

I plan to give the usual demos of news, telnet, ftp, gopher and Mosaic.

I thought it would add a nice touch to be able to have a live conversation with someone somewhere but I need to find someone to talk to.

The time would be about 0800 UTC on Tuesday October 18th. Not the most convenient time for anyone in the US I know.

If anyone anywhere could be around at this time and can run "talk" protocol, please email me.

Divisional News

Morse classes

Morse classes have now started at the Divisional Ofice 109 Wigram Street Parramatta .

This Wwednesday night will be the last chance to join our final class for this year. Starts at 7 pm for next 7 weeks at a cost of $30.00 for the course including handouts.

Jim Walker VK2XJW Education Officer

Librarian's request

The WIA (NSW) Librarian requires a copy of the FM transceiver Philips FM 747, circuit diagram, and if board circuits are available for photocopying, please send to the Librarian at Box 1066 Parramatta 2124.

Aub Topp VK2AXT, Librarian

Federal News

The ninth International Amateur Radio Union Region 3 Conference was held in Singapore recently. It was held over the period of 5th-9th September at the Apollo Hotel in Singapore's Chinatown region.

Five members from around this country represented Australia at the conference. Last February the WIA's Federal Council voted to fund a delegation of four people to the Singapore conference. In May the Federal Council appointed Kevin Olds VK1OK who is the IARU Liaison Officer, Neil Penfold VK6NE, Gavin Berger VK1EB, and John Aarsse VK4QA, as the official delegation. Wally Watkins VK4DO was also credited as an observer. He planned to attend on his way to the 7th ARDF championships in Europe.

However at the July Federal Council meeting, Neil Penfold indicated that he would no longer be able to attend so the Federal Council voted to send Roger Harrison VK2ZRH as Vice President in Neil's place.

The topics of discussion at the Singapore Conference included promotion of amateur radio in developing countries, a program devised and launched at the 8th Region 3 conference in Indonesia in 1991; matters relating to the concept of a commonly accepted amateur radio licence between countries; amateur satellites; amateur band intruders, and misuse of amateur bands; the international HF band beacon project; amateur radio direction finding; matters relating to education of prospective amateurs and amateur examinations, and the consideration of the requiremnt of Morse code ability for amateurs.

The outcome of the conference sessions will no doubt be reported in length in Amateur Radio magazine in due course.

Dural report

It has been a while since the members were last informed of activities at the Divisional broadcast station here at Dural.

The 6m/2m SSB transceiver, removed from service earlier this year, was deemed to be beyond economic repair, and a replacement unit is being sought. As notified on previous broadcasts, the 6m repeater was less than successful, and an alternative site has been found for the receiver -- the paperwork to have this approved is in progress.

How popular would a 10m FM broadcast be? We are considering adding this extra facility to our schedule, to take advantage of the imminent licence conditions, and your feedback is sought.

People with climbing harnesses are needed to shinny up the various poles here, to put the HF dipoles back where they belong; they were lowered to make way for the CSR tower and need to be replaced. Perhaps a "working bee" can be arranged, with a barbecue afterwards for the participants, as there is a lot of cleaning up to do as well.

-- Dave VK2KFU, Dural Engineer

Communications Day draws hundreds to Shepparton

The Shepparton and Amateur Radio Club Communications Day held on the 18 September proved popular.

The event was opened by the President of the Wireless Institute of Asutralia, Victorian Division, Mr. Jim Linton, VK3PC. During his address Mr. Linton said that changes in licensing requirements will soon make it easier for people from computer backgrounds to enter the hobby of amateur radio.

Over two hundred amateurs and friends attended. The majority came from regional Victoria and southern New South Wales. A number travelled from the Melbourne metropolitan area and one group from South Australia.

The latest communications equipment was on display. The club wishes to thank:-
A.J. & J. Coman Antennas, Daycom, Dick Smith Electronics, Icom Australia, Melbourne Satellites, Nally Towers, Strictly Ham and ZRV Electronics for making the day a commercial success.

Thanks also to John, VK3LM and Alf, VK3CQE for the slow scan TV demo, and Wayne, VK3XQA for the ATV display.

Jan, VK3ALF and his catering team deserve a special thanks for the 5 star meal.

All remaining space was taken up by the amateur traders who seemed to purchase as much equipment as they disposed of.

The local vintage radio club displayed a number of beautifully restored wireless sets from days long gone.

Peter, VK3YF, Event Publicity Officer for the Shepparton & District Radio Club, said that the Communications Day was one of the most successful organised by the club. This was due to the great support of wholesalers, retailers and traders involved. He said the event will be held in September 1995 and planning was already under way.

The club hoped all who attended had an enjoyable day. Any positive or negative feed back will be welcomed at P.O. Box 692, Shepparton, 3630.

Peter O'Keefe Publicity Officer

WICEN News

There are several events on the calendar this month. First, a reminder about the VRA Annual Conference, which will be held at Wagga next weekend. This conference celebrates the VRA's 25th anniversary, and Max Walters has decided to call it a day, after serving as President all that time, so a large turnout is expected. There will be a Dinner on Saturday, and an informal gathering on Sunday.

The "Hawkesbury Classic Paddle" is on the weekend of 22nd-23rd October; and as before, Kevin VK2CKD is in charge. Kevin advises that packet radio will be used in selected locations for the event.

The WICEN Co-ordinators conference will be held at Charles Sturt University, Bathurst, on the weekend of 29-30th October, and all are invited. The cost will be between $36 and $58 (depending on when you arrive) for meals and accommodation, exclusive of Saturday night's dinner, which will be held at a restaurant. The conference will commence at 0930 Saturday, and the programme will comprise lectures on the role of various positions in the organisation, to assist those in office (and to convince aspirants that it is not too hard), together with guest speakers on "The

role of the VRA", "WICEN in the DISPLAN", CREST, and other useful topics. There will be an opportunity after the dinner on Saturday to voice your views, and a short business session on Sunday. The agenda and full details will be sent upon receipt of your application, which must be sent to Morton Williams VK2DEX by the 14th October, and a $10 deposit is required. Topics for the business session are sought from RCO's, and they must be sent to the State Co-ordinator, John Howard VK2AMH, also before the 14th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

CLUB NEWS

Australian Amateur Television Club

The next general meeting of the Australian Amateur Television Club will be on October 9th, as always the second Sunday of the month commencing at 1pm, venue is Amateur Radio House Parramatta.

On this occasion the technical lecture will be by Vic Barker VK2BTV -- more information on that next Sunday.

There are a few more of the 1.2 GHz receiver modules. These will be made available for members.

The Australian Amateur Television Club members' barbecue will be held in November -- again more details next week.

Attention all Amateur Television Club members -- JOTA is coming up really quickly. If you can spare four hours on Saturday or Sunday, to stand around and explain to others how radio with pictures works, then we need you. You are invited to contact Paul VK2UPB on 018 404 162, or you can contact Bob Barnes on 587 3491.

Printed circuit board open day for Australian Amateur Television Club members will be held at Bexley on October 30th. The object will be to make a PCB of your choice -- from a club, EA, or SC magazine project.

For more information about the Australian Amateur Television Club listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz in the 2metre band commencing about 1930 hours, or you can view them on their Oakdale repeater television transmission on 1250 MHz.

Information on the AATC is provided by their Publicity Officer Bob Barnes.

Parramatta Amateur Radio Club

Just a friendly reminder to club members and guests that the next meeting of P.A.R.C. (Parramatta Amateur Radio Club) will be held on Thurs. 6/10/94 at 109 Wigram St parramatta at 19.30 hrs.

This is our general monthly meeting night.

Our Guest Lecturer will be Richard Soulie VK2ARS and he will be talking on that often spoken about subject Home Brewing and where to get the materials!

As usual tea coffee and biscuits and a good talk can be had by everybody.

Jim Walker VK2XJW President (The ghost who walks)

Castle Hill Amateur Radio Club

The next meeting of the Castle Hill Amateur Radio Club will be held on the night of Wednesday, 12th of October, which is one week later than usual.

We will be conducting a social evening, which will include a videotape concerning WW2 electronic warfare.

The meeting will commence at 8pm and we will be meeting as usual at the Castle Hill Military Radio Museum.

Visitors are always most welcome to attend.

Pleas contact Ian O'Toole, VK2ZIO on 680 2112 if you would like to visit the club.

from Ian O'Toole
Publicity Officer

Orange and District Amateur Radio Club

Orange and District Amateur Radio Club invites members and friends to the October meeting this coming Friday night the seventh, at 7.30.

Members and guests are requested to try to arrive on time, so a couple of urgent matters can be discussd before leaving on our conducted tour of the high-tech Email refrigerator factory. This is the visit that was originally planned for last month and as usual visitors are most welcome.

For our abbreviated meeting we have invited a local Scouts Leader to tell us of their plans for JOTA '94 and to recruit operators. We also need to arrange for operators at our WICEN-type communication exercise at the "Gnoo Blas revisited car rally" of October 23.

Members and subscribers to the famous ODARC Newsletter are advised that the October isue has been hand-delivered to those living in the City of Orange and will be mailed to others on Tuesday next.

Remember, meet first at the Cultural Centre, 7.30pm this Friday before the Email conducted tour. Let's see a big turnout of members and visitors.

Peter VK2ETK
Club President

Gladesville Amateur Radio Club

GLADESVILLE AMATEUR RADIO CLUB INC. REPORTS THAT ITS 70CM VOICE REPEATER VK2RRS, ON 438.375 MHS, IS OFF AIR FOR MODIFICATIONS AND WILL BE RETURNED TO SERVICE IN THE NEAR FUTURE.

GLADESVILLE TELEVISION'S ATV TEST TRANSMISSION MAY BE VIEWED ON CHANNEL 35 IN SYDNEY ON WEDNESDAY, FRIDAY AND SUNDAY EVENINGS, AND IS ALSO RETRANSMITTED ON WEDNESDAYS AND SUNDAYS THROUGH VK2RFM, THE AUSTRALIAN AMATEUR TELEVISION CLUB'S 23CM REPEATER, TO THE CENTRAL COAST WHERE IT CAN BE VIEWED ON VK2RTG ON 444.25 MHZ. IN ADDITION, THE SUNDAY EVENING VOICE BROADCAST FROM VK2WI IS RETRANSMITTED DURING THE ATV TEST TRANSMISSION WHICH COMMENCES AT 7 PM.

DE PAT VK2JPA CLUB SECRETARY

Manly-Warringah Radio Society

Members of the Manly-Warringah Radio Society are reminded that the club's next Communication Exercise is next Sunday morning at St. Ives Showgrund; those available to take part in the exercise are asked to contact any committee member by next Wednesday.

The Manly-Warringah Radio Society meets every Wednesday, at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, with business meetings on the second Wednesday and lecture nights on the third Wednesday of the month. Visitors are always welcome; just come along to the club any Wednesday from 7.30 pm, or phone the Publicity Officer, Richard VK2SKY on 971-4431 after hours.

Does anyone know whether ICOM IC-W21A (IC-W21AT without the key pad)
are being discontinued? USA versions of IC-W21A are now sold
in Australia with a discounted price tag. Most units have early
serial numbers.

The following is a QST

The FCC acts in the alleged California license fraud case. Disciplinary action is on its way! This story and more on Newsline report number 894 coming your way right now!

(*****
PUNITIVE ACTION IN CAL VE PROBE

The FCC has begun punitive action in the wake of widespread fraud in California's all volunteer amateur radio testing program.
The FCC takes action against 54 amateur radio operators connected with alleged license fraud in Southern California.
The Commission plans to revoke the licenses of three hams and is cancelling license upgrades for 51 others. Ordered to turn in their licenses are James B. Williams, AA6TC of Wilmington, California, Robert L. Flores, N6WPQ of Santa Monica and his wife, Rose Marie Flores, N6WPR. All three are former Volunteer Examiners holding Extra class licenses.
The Commission says that an exam session the three claim to have administered never actually took place. The Commission accuses all three of willfully signing certificates showing that people who were not tested had passed elements necessary for amateur radio licenses.
The Commission singles out Rose Marie Flores as being in charge of the paperwork for one test session. Flores is accused of getting other VE's to sign certificates of completion for people the FCC sez were not examined.
The Commission issued a show cause order against the three September 27th. They have 30 days to appeal or lose their ham licenses.
FCC is also punishing 51 other hams they received license upgrades from Volunteer Examiners suspected of fraud. In June, the Commission gave each amateur a choice: they could either take the test again, or lose their upgrade.
Only 3 of the 51 appeared for re-testing and all three failed.

Now, the Commission is revoking the upgrades all 51 hams received during exams in 1992 and 93.
The three amateurs who face losing their licenses are part of a larger group. Nearly three dozen Volunteer Examiners were suspended throughout California about a year ago. There's speculation that the Commission's action may be the FCC's way of saying, there's more to come.

(*****
ENGINEER ADMITS SABOTAGING COMPETITION

A Cleveland Ohio radio station engineer has pleaded guilty to charges that he cut transmission lines that knocked Howard Stern's broadcast off a rival station.
On September 7th, William Alford pleaded guilty to one felony charge of disrupting a public service and one misdemeanor count of criminal trespass.
Alford admitted that last June 10th that he cut cables to a satellite feed as shock-jock Howard Stern was broadcasting his syndicated show from a Cleveland nightclub. Stern was in Cleveland to promote local station WNCX FM, which carries the show.
Alford worked for WMMS FM at the time of the incident but is no longer is employed there. He could be sentenced to up to two years in jail.
In a prepared statement WMMS said Alford acted on his own.
A check of the FCC database indicates Alford is not a ham.

(*****
CABLE TELEVISION SYSTEM SHUT DOWN

The FCC has partially shut down a cable television system for excessive leakage. It happened in Oklahoma where an engineer working out of the Dallas, Texas office discovered that a small town cable television system had a signal leak on aeronautical frequencies.
The FCC identifies the cable system as Trans-Western Video of Waukomis, Oklahoma. The FCC says it measured a cable leak of 1,850 microvolts per meter where the FCC rules permit a maximum of 20 microvolts per meter.
As a result of this leak, and several smaller ones, the system was found to violate the cumulative leakage index limit. This called for suspension of operation on all aeronautical frequencies to prevent interference with aviation communications.

(*****
FAIRNESS R.I.P.

The FCC's top lawyer has recommended that the agency not consider reinstatement of the fairness doctrine. This is a former rule that required TV and radio stations to present both sides of a controversial issue.

According to the trade publication Variety, the recommendation, from FCC general counsel William Kennard, is considered a big win for broadcasters. It's believed Kennard made the decision only after consultation with Reed Hundt, the FCC's Democratic chairman. Kennard's opinion could close the books on attempts to resurrect the fairness doctrine, which had been a staple of U.S. communications policy until 1987 when then FCC chairman Dennis Patrick led a drive to repeal the rule. Patrick argued that the fairness doctrine stifled, rather than promoted the presentation of stories with controversial themes. He also said that the explosion in cable TV and other media outlets rendered the rule obsolete.
Since Patrick's FCC nixed the regulation key congressional Democrats have fought unsuccessfully to pass a bill making the doctrine law and expanding its scope to cover new communications technologies.
But in a memo circulated to Hundt and the four other FCC commissioners, Kennard says that the legal arguments against codification of the fairness doctrine have not changed since 1987. Moreover, he believes that arguments today are even stronger than they were seven years ago against bringing the Fairness Doctrine back.

(*****
ARRL TO ASSIST HANDICAPPED

The says that it ARRL is currently working to develop materials for disabled individuals with an interest in Amateur Radio. It notes that it is looking for stories, photographs, recordings of experiences of disabled Amateur Radio operators or from instructors and rehabilitative personnel who have worked with handicapped ham radio students. It is also looking for practical solutions to problems faced by handicapped hams. This includes adaptive devices for radios and computers that could be invaluable to a potential ham struggling to earn a ticket or make the ham shack as accessible as possible.
If you have any ideas and would like to help, please contact Mary Carcia, N7IAL in care of the ARRL Program for the Disabled, 225 Main Street, Newington, CT 06111. Or you can call Mary at (203) 666-1541 during normal business hours, Monday through Friday, Eastern time.

(*****
BRAILLE NOVICE EXAM

Meanwhile, Dave Allen, WD8LDY says that he has already transcribed the most recent Novice question pool for Examination Element 2 into grade two Braille. In his recent all United States packet radio posting Dave notes that anyone who needs it, please contact Dave at (214) 235-9821. He asks that you call him only between 9:00am and 9:00pm central time. WD8LDY adds that he will

try to get the Technician Element 3A done soon, and will look into others if requested.

(*****
NO UNION AT ARRL

There will not be a Union coming to ARRL headquarters after all. The National Labor Relations Board recently conducted an election among League employees on the matter of union representation. There were 65 employees eligible to vote. Most did and unionization was rejected by a wide margin.

(*****
EXAM DAY MISTAKE

National Exam Day is October 29th and not October 9th as noted in the September issue of the ARRL's QSO Media News. The league says that the October 9th date was nothing more than a typographic error.

(*****
ANS NEEDS INPUT

The AMSAT News Service is still looking for volunteers to contribute its weekly OSCAR status reports. If you have a favorite OSCAR satellite which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272. On the Internet he can be reached at WD0HHU@AMSAT.ORG, or by mail to his callbook address.

(*****
ELECTRONIC NASA PRESS RELEASES

Hams involved in the SAREX program and repeaters that carry space shuttle mission audio should take note that NASA press releases and other information are available automatically by sending an Internet electronic mail message to DOMO@HQ.NASA.GOV. Now, in the body of the message and not the subject line, you must type the words subscribe press-release without any quotes. The system will reply with a confirmation via E-mail of each subscription. A second automatic message will include additional information on this new electronic press release service.

(*****
DX

In DX, word that KU0J and DK8FD have been active from the Turkish Republic of Northern Cyprus. Activity has been mainly CW on 17, 30 and 40 meters. Unfortunately this one does not really count for anything but fun. You may remember that the League's DX Advisory Committee recently rejected a petition for new DXCC country status for the Turkish Republic of Northern Cyprus. DXAC

members stated that it did not meet DXCC Criteria Point 1 operating to government.

(*****
SPECIAL ITU STATION

Also, the ARRL reports that special event station 8N3ITU is operating from the International Telecommunication Union 14th Plenipotentiary Conference. The station is set up at the International Congress Center in Kyoto, Japan, site of the conference. ITU officials attending the conference who are licensed amateurs are allowed to operate the station. Japanese amateurs watch over the station and assist visiting amateurs. The conference is scheduled to run until October 14. QSL's may be sent via the JARL bureau, or direct with an SASE to 8N3ITU.

(*****
A FISH STORY

This story from Australia. Researchers at the University of Sydney say that they have made an interesting discovery that could yield major benefits in the areas of solar energy and optics and they owe it all to a fish.
It seems that a group of physicists were arguing at lunchtime over what makes a fish so "silvery." Unable to reach a conclusion, they went to a nearby Fish Market, bought the shiniest fish they could find, and took it back to the lab.
A scientific inspection of the fish skin showed that it contained "multiple stacks of organic crystals, interleaved by layers of watery tissues, arranged in what scientists call the Chaos Theory principle. In other words the cells are arranged in an apparently disordered manner, instead of neat arrays.
The highly efficient natural reflectors are intended to confuse predators, but this discovery promises to lead to more efficient solar mirrors and other optical and reflective devices.

(*****

And on that fishy note, we will say for this week, that's all from the Amateur Radio Newsline. You can write to us at Post Office Box 463 in Pasadena, California 91102.

Start the car? No. Drive the car? Yes.

If you transmit on the thing (the radio, not the car, smarty) without
a license, you are in violation. If you kerchunk a repeater, without
identifying, license or not, you are also in violation. Although that
only applies to license holders, since if you didn't have a license, what's
to identify?

Actually, in dense metro areas, it is often best to use a very high gain, narrow beamwidth, antenna and an attenuator. That's because the sharp antenna can be rotated to minimize multipath. Using just a dipole or rabbit ears, you're likely to have severe ghosting.

123. FEEDLINE: Looking for mailorder cable places. Any recommendations??

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 12:30:09 UTC
From: cropley@cbnewsf.cb.att.com
Message-ID: <Cx3K2A.6p3@cbfsb.cb.att.com>
Source record: 259159
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

Looking to get myself some cable. I will be operating on VHF and UHF
so I want to get some real high quality line. I don't think I can afford
Hardline (connector prices are incredible!). I heard that RG214 is pretty
good stuff (better than 9913). I think this runs around 1.50 / foot.
Does any one have the specs for RG214??
Are there any other "high-grade" cables out there in this price range??
I was considering a polytetrafloroethyalene dialectric (teflon) since it
has high heat ratings (up to 250 degress Celsius). comments?

Last Q, any recommended mail order dealers. I see adds for the cable X-perts
in QST, but I don't see to many others. I do want to make sure I'm getting
my best price.

Thanks in advance

Andy C

Modesty prevents me from bragging about my own exam prowess, (but you
can observe that the the call book doesn't show me with any previous
call sign!)

>
> Well, true enough ...
> I took all of the theory, tech -> extra in one sitting, I just agreed
> with the administering VE that they would keep passing me the next paper
> providing that I passed the one before it. Not exceedingly difficult, you
> just have to be prepared to sit there a bit longer than everyone else.
>

This is not any special deal. For the fixed fee of around $5.00 per session
you are absolutely entitled during any one session to take the theory papers
in continuous ascending order, so long as you pass each the previous one and
also, if necessary, take the code tests in decending order until you pass
one of those.

There is no need to grovel or bargain for this privilage or "agree" to
anything. It's the regular deal we all got.

(With these long lines, perhaps no one can quote me in order to contradict me!)

I'd be curious to know what the rules (Laws) are: Do you need a licence to purchase, or simply to operate? (My gut feeling is that you only need a licence to operate - but I'd love to be proved wrong!) ie, Is Radio Shack required by law to check whether you have a licence before selling the handitalkie??

We had some 6 meter AM activity here in the Portland, OR area about a year
ago on 50.4 Mhz. I have a Clegg 99'er and I gave my Clegg 66'er to a guy
up North of Vancouver, WA. About 4 stations were successful in contacts
with paths greater than 10 miles. I need to rouse the rabble and get those
rigs back on! Antennas are always a problem for 6, but I guess the quarter
wave ground plane works easiest. Most of those old rigs use a multiplication
factor of 6 so 8400 Khz is the right rock.

132. HF rig turns off the VCR??

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 15:33:34 UTC
From: hausman@patch.tandem.com
Message-ID: <Cx3sK1.EIp@tandem.com>
Source record: 259167

Has anyone ever seen anything like this? My transmitter (on certain frequencies) causes the VCR to stop playing.

I put together my HF station last weekend. I have a Kenwood TS-430 running barefoot (100 watts) into an MFJ tuner feeding a roof-mounted multi-band dipole.

While checking the antenna for SWR on 20 meters (CW transmission), our VCR stopped. We restarted the VCR and, sure enough, when I keyed the transmitter, the VCR stopped again. It almost seems like the motor changes speed for a moment, then the picture goes to "dead channel" snow for a few seconds, then the VCR stops playing. Perhaps I'm affecting the tape speed sync???

Strangely, if I tune the transmitter a few hundred KHz away, then I just get a light snow on the picture. With the VCR off, the TV picture (cable) is perfect. The place that gives the problem seems to be where the antenna is best tuned (about a 1:1.2 SWR).

The VCR is about a 5 year old RCA middle-of-the-line model. It is located only a few feet from the transmitter (in different rooms sharing a common wall). It would be difficult to re-locate either transmitter or VCR. In our old house, both units operated in relative peace (minor snow). While some (including me) might consider causing the VCR stop to be a feature, not a bug, my daughter disagrees. ;-)

Any thoughts on things to try?

Thanks,
...John WB6OHE

Jesse,
I have no experience with this HT, but my guess is if you indeed shorted something, you probably open circuited (burned out) a diode that may be in series with the external power jack to prevent the wrong polarity from being applied to the radio.

Check the schematic to see if such a diode exists. If it does, that's where I'd look. Also, I don't suppose there's actually a fuse in there somewhere....is there?

If you get a chance, let me know how it turns out.

Joe.
WZ5R
Las Cruces, NM

P.S. With the current state of miniaturization and use of surface mount devices, be be very careful if you decide to try to fix anything yourself. It might be worth it to send the thing back to the factory.

>That should give you more than your fill of hetrodyne squeal. If the capture
>effect held true, you would only hear one jammer at a time. :) The
>capture effect is only significant on wideband FM transmissions.

This isn't true Bruce if one of the stations is quite weak; you're
assuming all stations will have the same signal strength into the
repeater.

As an example, if two repeaters share the same output with one quite
weak, when the stronger one keys up there will be no hetrodyne squeal
from the more distant weaker machine.

I'm going to call the local FAA office and speak with a tech to get
the definitive answer.

BULLETIN 345 MGT ACS/RACES Plans 3/3
Release Date: September 26, 1994

ACS/RACES relationships are based on leadership and
cooperation, NOT on hierarchical power positions. Hence, no one
level of ACS or RACES Radio Officer has more authority than
another, such as a county RACES Radio Officer over a City RACES
Radio Officer, or a State Radio Officer over a County Radio
Officer. Each Radio Officer serves the one government for which
he/she is the unpaid government public safety communications
employee. Each has the responsibility and authority only for THAT
specific jurisdiction, state, county or city. These three levels
of government involved with RACES plans work on the basis of
mutual aid and cooperation, NOT authority. Part of that
cooperation is submitting city plans to the county and county
plans to the state for approval-concurrence. As a matter of self
protection a jurisdiction may reasonably require official
signatures on a plan before it concurs.

The level of communications nets for an ACS/RACES plan
are basic. A city plan addresses city to county, intra-city, and
maybe inter-city communications. A county plan addresses county
to state, intra-county, and possibly inter-county communications.
A state plan addresses state to counties, intra-state government,
interstate, state to Federal government, and possibly state to
public utility and other essential communications. There is no
FEMA or Federal RACES. However, a Federal government radio
station may enter a RACES net. Such net levels are graphically
depicted in the new California State plan. An emergency
communications reserve plan should reflect current conditions,
not plans long out of date. A communications plan does not
discuss what might be or what is planned for the near future.
Remember the old saying about the best laid plans of mice and
men?

For a copy of modern county and city plan formats, send a 3.5" disc with return SASE mailer to this office; For DOS it is in ASCII but WITHOUT graphics. For the MAC, its in MSWord 5.1 with the graphics. For the printed State of California plan with graphics plus annexes for the transportation and health departments send a check for $11 payable to the State of California and request the "l994 California ACS plan".
EOM.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

The UK does indeed have an allocation on 4 metres. To quote from the licence terms and conditions. Frequency 70.00-70.50 MHz, available on the basis of non-interference to other services outside the United Kingdom. Max power level of 22dBW and permitted types of transmission morse, telephony, RTTY, data, facsimile and SSTV.

The VCR has a PLL circuit working at 14.318 MHz (4 times subcarrier).
Your transmissions are disturbing the PLL and causing the master
oscillator to be pulled far enough off frequency to affect tracking.
This will cause the motor speed to change as the servo tries to
compensate, and the tension sensor to detect excess (or slack)
tape tension and automatically shut down the machine. Better shielding,
and moving the antenna further away, should reduce or eliminate the
problem.

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any offical
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

Robert D. Keys, NA4G
Raleigh, NC,
25 September, 1994.

A former pilot told me once he and several others were ferrying some new
C-130 aircraft across the Atlantic. Everytime one of them keyed their HF
transmitter, an engine shut down :o. It wouldn't kill an engine on another
plane. And it would not always be the same engine, but one would just stop.
There was no problem restarting the one that quit.

I don't know the final resolution. He said it made for a quiet flight.
(Needless to say.)

143. TM-733A.DOC (Release 2.0 10/1/94)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 16:57:00 UTC
From: tech14c@elroy.uh.edu
Message-ID: <3OCT199411573505@elroy.uh.edu>
Source record: 259175

Here's the new TM-733A.DOC. It's also available ftp at oak.oakland.edu,
but give scott a couple of days to post the new version.

I tried cross posting this from r.r.a.equipment, but I don't think it
was successful, so I'm going to post it again.

Modifications, Undocumented Features, and Bugs for the Kenwood TM-733A.
Release 2.0 Updated October 1, 1994

Updates for Release 2.0 are identified by parenthetical statements.
There is also some new information sprinkled throughout the previous material
either to update it, to correct misinformation, or to be more specific.

This document is a compilation of Internet messages from
Steve Haehnichen KE6JGK and Brad Killebrew N5LJV, edited by Brad Killebrew.

Extended RF Modifications

Refer to diagram below. (Inserted into Release 2.0)

Remove power source from the radio.

Remove the display panel.

Remove the top cover the radio.

Face the front of the radio away from you.

Remove the speaker.

Looking from the back of the radio, the control board is vertically
mounted just behind the front panel wall (which can be removed easily
if better access is needed.)

Just to the right of a chip labeled XRU4066BCF and just to the left of
two green wires (B2 & B3 which are draped over the board to the rear) are
two zero-ohm SMT resistors, B0 and B1, marked "000".

Remove B0. (the one on the left - furthest from the green wires)

Taking it out might be a bit tricky. It's glued down for surface-mount
assembly. Be careful not to pull the trace from the board.

Perform a CPU reset by holding [MR] while turning on the radio.
It will then ask if it is "OK?" to reset, press [MR] again.

The ranges after modification are as follows:

Tx: 136-174 410-470
Rx: 118-174 300-470

The cellular band is indeed missing.

ONLY Removing Jumper 1 (B2) is the MARS/CAP modification.

** Diagram of specified area on Control Board **

EDGE OF BOARD, viewed from the rear, looking toward front panel

Green jumper wires (B2, B3)

The jumpers are actually soldered on the other side of the board,
but the loops come up over the top and hang over the B0/B1 side.

B0=R414
B1=R412

Here's something interesting! According the Kenwood rep I spoke to,
performing this mod *does not* void your factory warranty. The same
goes for any Kenwood published service bulletin or modification info.
We are encouraged to perform the repairs ourselves to save them the
trouble and expence.

DTMF Remote via Microphone

The TM-733 is fully DTMF remotable via the microphone (documented).
The radio can also be externally DTMF controllable with an HT, but that
will be described later.

The DTMF control keys are exactly as shown on page 81 of the
manual. Note that the microphone is active all the time, so any
ambient DTMF tones near your mic will also change rig settings. This
includes tones coming in on the other band and out the speaker.

Cross Band Repeating

Cross band repeat isn't documented but comes ready from the factory.
To enable cross band repeat from the front panel, first select a band
by pressing BAND SELECT. Then, change the control to the other band by
hitting [CONT SEL]. Next, press [F] for one second, then the "X" button
(far right side). Decimals will appear between the Kilohertz digits, and
the "ON" indicator will light momentarily. The microphone sequence to
enable cross band repeat while in remote control mode is "DC".

The transmitter hang time can be toggled between 500ms to 0ms by
turning on the radio with [LOW] pressed. They also recommend enabling
the Time-out Timer, for obvious reasons.

Note that the TM-733 can also be used as a "one-way" cross-band repeater.
For example, if you can receive a distant repeater with your HT, but have
difficulty getting into it, you can use the TM-733 to boost your transmitted
signal. To set this up, just omit the part where you "change the control
to the other band by pressing [CONT SEL]." Doing this will setup the TM-733
to repeat your signal to the other band, but will not retransmit the distant
station back to you. If this sounds ambiguous, play around with it a little
and it will begin to make sense.

DTMF Paging and Squelch

The DTMF Paging & DTMF Squelch protocol (AAA*BBB) is compatible with
the Yaesu 530 and all Kenwood radios supporting this.

DTMF Monitor

There are some serious bugs in the "DTMF Monitor" feature (Page 63:
[PTT] + [DWN] + Power On). This feature supposedly lets you hear the
DTMF tones you are transmitting. The first problem is that it only
gives you a short tone from the internal speaker. This is not true to
the transmitted tone that lasts as long as you hold the key. The much
bigger problem is that it mixes the desired tone and the feedback tone
resulting in an almost indecodable DTMF tone. Kenwood is aware of this bug.

(Updated information for Release 2.0):

Per Ricardo, a Kenwood technician, they are aware of this bug and are
working on a fix. No details yet.

Front Panel

There are two undocumented icons on the display; one is the "heart"
symbol. Anyone know what that's for? It could just be a spare. I
noticed they used the odd "spade" symbol to indicate AM receive, so

maybe these were last minute extras. Dunno..

From looking at the schematic, it seems that the only programmable memory is physically located in the detachable front-panel. I think this means that if I use my front-panel on someone else's radio, I get all my memories and settings. Anyone try this?

The whole front panel is connected to the rig by four wires (yep, including the volume/squelch pots.) According to the schematic, these are: power, ground, data in, and data out. I'm wondering how hard it would be to make a PC interface for this thing and replace the whole display and controls with a full-screen version. It wouldn't surprise me if many of the programming limits were also imposed by the front panel, and not the unit.

Wireless Cloning

The advertised but undocumented Wireless Clone function is described in App Note AAN-0008 which they will mail out on request. (Maybe if enough people ask for it, they will include all the functions in future instruction manuals.) In summary:

- Prepare the two radios for simplex operation on the same frequency.
- Turn both radios off
- Press [CALL]+[SHIFT] + [Pwr On].
- This should place the radios is clone mode with "CLonE" on the display.
- Press PTT on the "Master" radio momentarily. This will start sending the programming DTMF tones.
- After all data has been transferred, the display of all radios will read "End", indicating success.
- If the signal is interrupted or corrupted, the "Slave" displays will read "Err". Turn them off and try again.

Notes:

- Both the Master and Slave radios must have the same number of memory channels available for each band. Example: You can not clone a stock Master to a Slave with ME-1 memory expansion.
- You can not clone between different Kenwood radio models, even if they seem identical.

Be careful when using the clone feature. It has been known to wipe out or scramble memories on the master radio during or right after clone.

Bugs and Problems

To date, I have logged two trouble reports with Kenwood.

The first is the well-known problem with the transmitted PL (CTCSS) tone. The tones are filthy. They contain many harmonics and synthesis noise.

I'm guessing this is because they are using 7-bits from the CPU and a resistor net (DAC) to synthesize the tone. The sound/intensity of the noise depends on the actual frequency being generated. The PL tones also come out of the radio's speaker while transmitting. Weird, but not a problem.

The PL noise seems most messed up (on my radio) at 107.2 Hz, where the noise beats with the tone. Go simplex and ask someone to describe the noise to you, or listen carefully to your own speaker while transmitting. Some repeaters do a better job than others of hiding the noise for you.

(New information inserted into r2.0):

```
============================
Transmit PL Fix
============================
```

Kenwood just released a Service Bulletin to address the transmitted PL tone noise on the TM-733A. (Yeah!!) Call the Kenwood Service Dept. (1-310-639-7140) if you want a hardcopy. Here's a summary of the text. Use it at your own risk. If you are going to get into your radio with a hot iron, you should first get the real paper from Kenwood with the drawing.

Kenwood Service Bulletin #ASB-1060 2 Pages
Subject: TM-733A PL Tone Distortion August 30, 1994

Symptom:

Transmitted PL tones at the receiving station have a relatively high level of distortion. This is easily seen when the incoming signal is viewed on an oscilloscope.

Countermeasure:

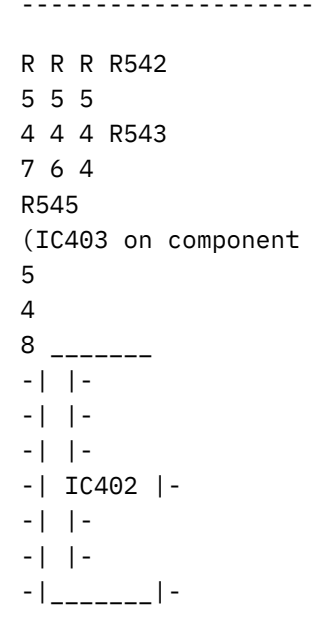
Change the value of the "Pull-up" resistors in the PL tone encoder circuit as shown in the accompanying chart and illustration. This reduces the distortion from around 9% to approximately 4%.

Part	OLD value	NEW value
R542	1.8k	2.7k
R543	1.8k	3.3k
R544	1.8k	4.7k
R545	1.8k	6.8k
R546	1.8k	10k
R547	1.8k	10k
R548	1.8k	10k

Procedure:
----
1. Disconnect the power cable, microphone and antenna's, etc.
2. Detach the front panel and set it aside.

3. Remove the top and bottom covers.
4. Remove the speaker and speaker mounting bracket.
5. Disengage the plastic front panel from the main chassis.
6. Carefully disconnect the two ribbon cables from the Tx/Rx unit C/4.
7. Remove the two Phillips head screws that secure the Tx/Rx unit to the chassis.
8. Turn the circuit board over and replace the resistors using the parts list and illustration as a guide.
9. Reverse steps 1-7 for reassembly.

TX-RX Unit (X57-4360-00) Foil Side View



Caution: This modification requires advanced surface mount soldering equipment that is rated for CMOS circuits. It also requires familiarity with advanced surface mount soldering techniques. If you do not have the proper equipment or knowledge do not attempt this modification yourself. Seek qualified assistance from your closest Kenwood Service Center (Long Beach, CA, or Virginia Beach, VA).

The Service Manual specifies a test for the PL. The technician is simply required to verify that any one PL tone is between 500 and 1500 Hz deviation. This is quite a wide tolerance range! The "standard" PL tone deviation should be 750 Hz. Twice that strong might be too strong and become audible. There are no trim-pots on the PL deviation, so I'm guessing that the deviation is pretty constant from radio to radio.

The dirty PL is definitely found on early models, but we have had many reports that the PL problem has been fixed in newer versions of the radio. If you purchased your radio after September 15, 1994, (or your serial number is greater than 55000000) it's a good chance that you may not have the PL problem.

The other problem concerns the DTMF Confirmation Tones. This feature is off by default (I wonder why :), while it seems pretty useful. To turn it on, press [PTT] + [Down] on the microphone while powering the radio on. This will generate short DTMF confirmation tones whenever you send DTMF over the air from the keypad. Unfortunately, it mangles the beginning of the outgoing DTMF tone! This is serious enough that most local repeaters can't detect the tone, or count it as two tones.

Get a receiver and listen to what you are sending out when the Confirmation tones are enabled. It sounds to me like they may be mixing the confirmation tone in with the real tone and getting some destructive interference. Just a guess, though.

I called a Kenwood technician (Ricardo) and worked with him on the phone to reproduce the problem there. So, as of today, this is a Known Problem, and they are looking into a fix. :-)

I am really curious to know what they would say if other folks called up and complained about this problem. Would they deny hearing about it, or would it really be a Known Problem? Might give some insight into the PL-noise denial thing anyway. :-)

Personally, I'm much more concerned about the noisy PL than the DTMF confirmation tones, since I can just shut those off and pretend that feature doesn't exist. If enough people call about the PL problem, maybe they will come out with a real fix and offer it under warranty to all the radios out there (since they're all pretty new). My guess is that it will involve a free TSU-8 tone decode module, but don't hold your breath. :-)

External DTMF Remote Control

The following procedure places the 733 in External DTMF Remote Control.

Note that this mode is different than DTMF Remote Mode. This mode concerns the control of the 733 with an HT, and not the microphone.

- Press Band Select and select the UHF band.
- Pick a UHF control frequency.
- Turn on the UHF DTSS function and select a tone sequence. (p. 89)
- Turn the UHF DTSS function back off.
- Press Band Select to move to the VHF band.
- Press [CONT SEL] to move control back to the UHF band.
- Turn OFF the radio, press and hold [CONT SEL] while turning the radio back on, then release [CONT SEL]. The S-meter scale and the DT indicators for the UHF band will begin flashing. The LOCK indicator will turn ON, and most front-panel keys (except PWR) will be disabled.
- To begin remote control, you should key the external radio and press the following key sequence: "Axxx#" where "xxx" is the preset DTSS code selected earlier.

- If the proper code is received by the 733, the beeper will sound and the DT indicator will stop flashing. The radio can now be remotely controlled using the function chart below.
- To return to standby mode, press "A#" on the remote radio.
- To return the radio to normal operation, turn the radio off, then press and hold [CONT SEL] while turning the radio back on.

Refer to this chart when using the TM-733 in "External DTMF Control".

1 2 3 A
T.ALT ON TONE ON CTCSS ON ENTER

4 5 6 B
T.ALT OFF TONE OFF CTCSS OFF TONE SEL

7 8 9 C
CALL VFO MEMORY REPEATER ON

* 0 # D
DOWN POWER LEVEL UP REPEATER OFF

There are no "shifted" functions. Just one function per button.
After you hit "B" for TONE SELECT, press * or # to go up or down,
and same is true when in VFO mode or in MEMORY mode.
Tones 7, 8, and 9 mimic the three buttons at the top of the 733 mic.

Pressing "C" places the radio in cross band repeat mode. You will recognize this because of the dots between Kilohertz digits.
After pressing "C", put the radio back into standby mode with "A#".
The 733 will now cross band repeat. To disable cross band repeat, place the radio back into the External DTMF Remote Control with "Axxx#".
If you can read through the lines, the 733 is capable of operating as a frequency agile remote base. Now Kenwood just needs a CW IDer!

Assembly Mode Test

In the TM-733 Service Manual, it describes a test mode that I haven't seen mentioned anywhere else. So, here's the scoop:

Entering Assembly Mode: [CALL] + [MUTE] + [Power On]
All LCD segments should come on. (To exit, power off.)

Press the [VFO] key. *This must always be done first*
The serial port is checked and "F" with "80" on the display indicates test passed. "1" or "2" means failure.

Different keys now show different displays, with [LOW], [SHIFT], [TONE], and [REV] also adjusting the backlight intensity.

Set the dials to minimum, then press the [MR] key. Each of the dials shows the digitized level.

This looks useful for checking all the keys and dials when you suspect
a bad connection.

------------------------snip here and print--------------------------------

Kenwood TM-733A Quick Reference Guide by Brad Killebrew N5LJV

[#] PRESS A NUMBER, NOT THE POUND SIGN.
[KEY] PRESS AND RELEASE [KEY]
[KEY1]+[KEY2] PRESS AND HOLD [KEY1] DOWN, THEN PRESS [KEY2]
[KEY1],[KEY2] PRESS [KEY1] MOMENTARILY, THEN PRESS [KEY2]
[KEY]+[PWR] WITH POWER OFF, PRESS AND HOLD [KEY] THEN HIT [PWR]
[KEY1]+[KEY2]+[PWR] YOU GET THE IDEA.
[F] (1s) PRESS AND HOLD [F] FOR ONE SECOND. "F" THEN BLINKS.
[KEY] (1s) PRESS AND HOLD [KEY] FOR ONE SEOND.
[F],[KEY] (1s) PRESS [F] MOMENTARILY, THEN PRESS [KEY] FOR ONE SEC.

The following entries are listed in the order as they appear in the manual.

RECEIVE AUDIO SWITCHING [F] (1s) [CONT SEL]
AUTOMATIC SQUELCH [MHZ] + [PWR]
S-METER SQUELCH [F] (1s), [S.QSL]
SQUELCH HANG TIME [F]+[DIM]
RD OUTPUT SQUELCH CONTROL [TONE]+[PWR]
VHF+VHF OPERATION [F],[CONT SEL]
UHF+UHF OPERATION [F],[CONT SEL]
TRANSMIT BAND LOCK [F],[BAND SEL]
BLANKING A BAND DISPLAY [F] (1s), [BAND SEL]
VFO TUNING LIMITS [F]+[C.IN],(L.FRQ)[MR],(U.FRQ)[MR]
AM/FM MODE [MHZ] (1s)
FREQUENCY STEP SIZE [VFO],[F],[STEP]
1 MHZ/10 MHZ TUNING TOGGLE [VFO],[F]+[MHZ]
POWER OUTPUT [LOW]
TIME-OUT TIMER [F] (1s),[TOT]
WRITING MEMORY (SIMPLEX, DUPLEX) [F],(FREQ),[MR]
WRITING MEMORY (ODD SPLIT) (RX FRQ),[F],[MR] (1s),(TX FRQ)[MR]
MEMORY TO VFO TRANSFER [F],[VFO]
ERASING MEMORY CHANNELS [MR],[F]+[MR]
RECALLING MEMORY CALL CHANNEL [CALL]
CHANGING CALL CHANNEL (SIMPLEX,DUPLEX) [F],[C.IN]
CHANGING CALL CHANNEL (ODD SPLIT) (RX FR),[F],[C.IN] (1s),(TX FR)[CALL]

Here's the general information for the list you've subscribed to, in
case you don't already have it:

Welcome to w1aw-list, an electronic-mail distribution list for
official news and information from the American Radio Relay League.
As a subscriber to this list, you will receive bulletins normally
transmitted by the League radio station, W1AW, in Newington Connecticut.
The bulletin IDs are grouped according to the topic:

ARLBnnn -- general information
ARLDnnn -- DX and DXpedition information
ARLKnnn -- keplerian data for satellites
ARLPnnn -- propagation information
ARLSnnn -- satellite news
ARLXnnn -- special bulletins

(where "nnn" is a serial number beginning with 001)

In addition, w1aw-list carries press releases and other informal
news items from League headquarters.

This mailing list is maintained by Majordomo. Send mail to listserv@netcom.com
with the following commands in the body of the message (the subject is ignored)

Mark Ellis said:

>If you kerchunk a repeater, without identifying, license or not, you are
>also in violation.

I don't want to cause a stink, but I don't think that's correct. By all means I'm not implying that I am in favor of kerchunking, but I don't think it's a rules violation if you kerchunk.

Now, if you kerchunk, and then never begin a conversation, then yes it's an unidentified transmission and against the rules. But, on my side of the world, many hams kerchunk a repeater before they give a general call to rid the air of the repeater's CW ID. Then, after the ID has stopped, they call who they want to talk to. Remember that according to the rules, a ham station can initially talk up to 10 minutes without giveing their call. But, after the first 10 minutes is up, it has to be done every 10 minutes thereafter.

If I'm wrong, please correct me.

---------- Response ----------

For small appliances you can use travel adapters. For larger
appliances there are step up/step down transformers available.
I purchased a 400 watt unit from a Remington store. I suspect
there are probably other stores that sell a similar product.

When most people speak of "kerchunk" (which is a hard word to use
seriously in a conversation!), they are referring to the act of keying up
the repeater just to see if its there, and not identifying.

Yes, if you do as you say, and identify within the next 10 minutes, then
everything is fine. But yes again, it is indeed a rules violation if you
just key up and don't identify.

Clear now?

>Remember that according to the rules,
>a ham station can initially talk up to 10 minutes without giveing their call.
>But, after the first 10 minutes is up, it has to be done every 10 minutes
>thereafter.
>
>If I'm wrong, please correct me.

Be forewarned, some will probably jump all over you for that comment
there. It's been a muchly heated debate as to whether or not you can go
for that first 10 minutes without identifying. You know, "well, yeah..
the rules SAY that, but they don't MEAN that". I just ignore everyone
and keep operating the way I operate, which has yet to find any
complaints so far...

Talk later!

Russ Blaine (rblaine@max.tiac.net) wrote:
: My friend has a CB radio that works fine - when his computer is off. When
: he turns the computer and monitor on, the static and hiss level on his
: radio go way up, making transmissions very hard to hear and some almost
: indiscernable.

: Questions:
: How can we get rid of this?
: 1) Would something like a lead box around the actual CB radio eliminate
: this?

Lead wouldn't be a good choice. It might shield from Gamma rays, but as
a conductor it isn't all that great. To prevent RF infiltration, you want
the best conductor you can get - usually copper- or silver-based paint or
braid to seal the enclosure.

: 2) Would a lead box around the computer eliminate this?

No. You'd never be able to move it again, though.

: 3) Is it the antenna's fault (we're using a homemade 1/2 wave dipole
: mounted vertically)?

It's the antenna's fault (possibly) in that it's too close to the
computer. If you've got the coax and space, move it outside and away
from your computer. If you've got bad connections/open spots in the
coax, you're asking for trouble, too. What kind of coax is he using?
Decent stuff, or Rat Shack RG-58? The better the shielding on the coax,
the less signal infiltration you'll get.

: 4) Any suggestions as to where I can find sheets of lead (if that's the
: answer) and how to put it up?

Again, try to get some copper paint and braid to seal the cabinet. Ask
around for suggestions - I don't know of any brand names.

: The interference is not coming specifically from the monitor or computer,
: but both.

Yes, that's correct. Usually the worst radiators are cables connecting
pieces. Try ferrite beads/donuts on them, sometimes that'll help.

: Is the interference (apparently caused by electro-magnetic fields from
: the monitor and computer, right?) getting picked up by the antenna, the
: radio itself, or both?

It could be both, depending on how well (or poorly) they're shielded.
Try connecting a PL-259 with a 47ohm resistor (or a good dummy load) across
the CB. Listen and see if you've still got interference. If so, the radio
itself is getting RF into it. If not, it's either the coax or the antenna's
proximity to the computer.

1. You are confusing the log-periodic antenna with the log periodic
dipole array (LPDA). They are not the same thing.

2. VHF TV antennas are not straight-out-of-the-textbook LPDA's
anyway. On high VHF band (channels 7 thru 13), the elements are
3/4 wave length long and swept forward to form a sort of V-beam to
get extra gain. (Ever wonder why only VHF TV antennas have swept
elements, not UHF TV or any other LPDAs?). Hence one set of elements
handles both high and low band.

3. Winegard makes a UHF TV antenna that is LPDA at one end and parasitic
(Yagi type) at the other end. Works pretty well.

If you build a conventional LPDA from a book, you will definitely be
at a disadvantage compared to the exotic commercial tricks I've listed
above.

SYNOPSIS OF ACTIVITY

Solar activity was very low. No significant activity was
noted on the disk or limb.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to unsettled levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled levels during the first day with
active to minor storm levels expected for the remaining period.
Major storming is forecast for the third day at high latitudes.
Activity is expected due to coronal hole effects.

Event probabilities 03 oct-05 oct

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 oct-05 oct

A. Middle Latitudes
Active 25/35/35
Minor Storm 15/25/25
Major-Severe Storm 05/10/10

B. High Latitudes
Active 30/35/35
Minor Storm 25/30/30
Major-Severe Storm 10/15/15

HF propagation conditions were normal over all regions.
Conditions are expected to begin deteriorating over the next 24
hours. Even middle latitude paths are expected to begin
deteriorating. Conditions may not begin improving notably
until 06 or 07 October.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Don't know what to try, but when I set my VHF mobile station up (internal
groundplane antenna) and keyed the mic at 50 watts I found that I could turn
my 3 year old RCA TV off from downstairs. I now just run 5-25 watts -- except
when I think the kids have been spending too much time upstairs. ;^)

From: pvj@hprnd.rose.hp.com
Message-ID: <36pi2d$rij@hpchase.rose.hp.com>
Source record: 259087

I came across a batch of these plugs for the FT-530. They are a perfect fit and better yet the plug is at a right angle allowing the wire to lay off to the back side of the radio. It also keeps the wire/plug from wearing out from movement. They are high quality and have about 3' of wire on each plug. If you are interested in one let me know. I don't want any money for them as I got them dirt cheap. Any wants please reply to my Email.

The National Science Foundation is no loger in control of sections of the internet and as a result, there are no official rules against advertising on the net. The only thing regulating advertising now are the readers who get upset when they see ads. If the ad is directly related to the newsgroup and is presented in an informative, no-hype, manner, then I welcome this information.

Really? I don't remember that debate. I've got a budy that I talk to
on 40 meters every week who seams to be an authority on amateur radio.
He's been licensed since the 30's and knows all about the rules. I'll
run this topic past him and let you know what he says!

73 for now.

|> .....
|>
|> Clark Savage Turner, Graduate Student Researcher

I suspect that Clark's point should be well taken, on the other hand,
it can also depend on the audience you are addressing. I had to make
a presentation to the local county Planning Commission about a year ago.
This is the place where the epicenter of the Loma Prieta Quake of 89 is
located. We also suffer from periodic wild fires. ARES/RACES is well
integrated into the county, and the local politicians are aware of our
presence mostly due to constant exposure over time during real emergencies.
I found it quite effective to just drop some numbers on the planning commission
concerning volunteer hours supplied during the different events. It
went along way to demonstrating just how much work is being done by the
amateurs during emergencies.

But to parallel what Clark is saying, If I was trying to make a presentation
to the local garden club, I'd have to go alot further, and into a lot more
detail to impress the folks about what amateurs are doing during
emergencies. Even then, the local garden club is still going to be
familiar with quakes and fires, since they live here too. It's all a
matter of how we present the arguement and who the audience is!

TAPR provides allows anyone to request information on TAPR, products,
newsletters, and lots of other files. To find out more about this service,
send an e-mail message to listserv@tapr.org with the subject line "Request"
and the following text in the body of the message:

help (for a brief set of instructions)
index -all (for a list of all file by topic area)
get tapr taprinfo.txt (or info on TAPR)

In the above message example, "help" retrieves a brief set of instructions
for info, "index -all" retrieves a list of available files by topic and
"taprinfo.txt" retrieves a text file containing information on TAPR and what
TAPR is all about. If you want to retrieve several text files with one
message, use a separate line for each "get filename" request.

General Information:

* Ever heard of a TNC ?

* Interested in general packet radio information?

* Interested in high-speed packet operations?

* Interested in other types of digital communications?

* Interested in experimenting or building kits?

* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

% Support Research and Development efforts in the area of
amateur digital communications

% Disseminate information on packet and digital communications

% Provide affordable and useful kits for experimenters and hobbyists

% Pursue and help advance the amateur art of communications through
publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR
history.

The TNC (Terminal Node Controller) project grew from a discussion in
October of 1981 at a meeting of the Tucson Chapter of the IEEE Computer
Society. A week later, six of the attendees gathered and discussed the
feasibility of developing a Terminal Node Controller that would be complete
and available to amateurs at a modest cost. This was the genesis of TAPR.

On June 26th 1982, Lyle Johnson, WA7GXD, and Den Connors, KD2S, initiated
a packet contact with the first TAPR unit. The project progressed from
these first prototype units to the TNC-1 and then finally to the TNC-2 which
is now the basis for most amateur packet operations worldwide.

TAPR was founded in 1982 as a national organization with interests in the
areas of packet and digital communications. Today, TAPR continues as a
membership supported non-profit amateur research and development
organization. TAPR currently has more than 1000 members, worldwide. TAPR
continues to develop kits for the amateur community and is working actively
on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published
Packet Status Register newsletter. PSR has been published since 1982 and is
recognized as an authoritative source for up-to-date user and technical
information on packet radio. Much of the material in PSR is timeless. Back
issues may be obtained from the TAPR office. Membership in TAPR is $15 for
one year. In Canada and Mexico membership is $18 and outside North America
they are $25.

Join the amateur digital-revolution -- Join TAPR!

Special Interest Groups

TAPR maintains several SIGs in various areas. To get the latest list of
SIG groups, send an e-mail message to listserv@tapr.org with the subject
line "Request" and the following text in the body of the message:

lists (for list of mail groups on TAPR.ORG)

To request the information on any mail group, send an e-mail message to listserv@tapr.org and in the message text include:

information listname (where listname is the name of the mail group)

When you are ready to subscribe, send e-mail to listserv@tapr.org with the following command in the message text:

subscribe <list> <your name>

List should be the name of the mail list you want to join and Your Name should be both your First and Last Name.

Current SIGs include:
NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP DSP Software Development Forum
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits

162. Scouting on the Net during JOTA (World Jamboree On The Air)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 20:11:42 UTC
From: macman@bernina.ethz.ch
Message-ID: <36pohu$qj3@elna.ethz.ch>
Source record: 259096
Cross-posted to: rec.scouting,rec.radio.amateur.misc,alt.irc,de.comm.ham

Here are the side events to the Worldwide Jamboree on the Air,
which will be held on October 15-16 on the amateur radio
frequencies worldwide. More details on JOTA 94 and the frequencies
used can be found on ftp.ethz.ch in the directory
rec.scouting/worldwide.

(Note: this is an extract of the upcoming release of rec.scouting
FAQ#2 on worldwide scouting. Since JOTA is so close, I decided not
to wait until the normally scheduled posting)

At this time, I've received the announcements for three Internet
Happenings to be held during JOTA 94 (October 15-16):

A. JAMBOREE ON THE IRC (JOTIRC)

IRC stands for Internet Relay Chat. IRC is devoted to just "type-talking"
with other users around the world. You join what they call a channel
(similar to AOL's rooms, if you're familiar) and type words which appear on
the channel. Everyone on that channel receives your words and can respond.
The software needed is basically a client. Clients can be obtained from many
ftp sites. See Scott Yanoff's "Internet Services" list on
alt.internet.services for public IRC clients, or find out if your own system
has the client installed by typing the following from your UNIX prompt:

```
irc
/join #scouting
```

For more information on IRC, anonymous FTP to:
cs.bu.edu:/irc/support/tutorial*

One of the permanent channels on IRC is #scouting, which will be the
central meeting point for JOTIRC participants.

B. CIBER CAMPAMENT

The mexican scouts have set up a local chat server called "Ciber
Campament". While it is set up for JOTA 94, the server is already up
and running today.

To connect, telnet to 129.108.3.7 on port 7777 (type
'telnet 129.108.3.7 7777' from your UNIX or PC host, or use NCSA
Telnet from a Macintosh). You can log in with any alias and any
password.

C. E-MAIL JOTA 94

Mosman District Scouts, located in Sydney Australia, invite you and the girls and boys in your Scout/Guide unit to participate in EMAIL JOTA'94.

At 1st Balmoral Sea Scout Hall Mosman District Scouts, Guides, Brownies, Cubs, Rovers, Rangers, Venturers and their Leaders will be broadcasting on 2 or 3 amateur radio rigs provided by alocal radio club. There will also be a dial-up phone link between a UNIX computer called 'scoutnet', and a commercial UNIX email service connected to the Internet.

In the weeks leading up to JOTA which happens worldwide on during October Scouts and Guides will be able to use the email service to pre-arrange times and frequencies for radio contact with other Scouts/Guides.

For more information on this event or to get in contact with 1st Balmoral, contact John Young at yo@sydney.sgi.com.

Actually, yes. When you "kerchunk" the repeater, you're
transmitting without a license (assuming you don't have the license).
Anyone may start the engine of a car, and even drive it, without a
license--they just can't drive it on the public streets.

164. Lightning protection advice needed!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 20:25:04 UTC
From: bro@alpha1.rtpnc.epa.gov
Message-ID: <1994Oct3.202504.23087@rtpnc.epa.gov>
Source record: 259098

I'm looking for some advice that anyone can offer on how I might protect my tower-mounted wind sensors from lightning damage. I've posted this on sci.geo.meteorology, but who knows more about electronic equipment on towers than a ham?

Here's the situation. The cup generator for the anemometer and the electrical distributor for the wind vane are mounted on a 64-ft free-standing metal tower in order to get them above the trees nearby. Thunderstorms are quite common in my area, and I have mounted these sensors a foot to each side and 3 feet from the top of an 8-ft aluminum mast in hopes that the solid tip of the mast would receive any lightning that struck the tower. The tower is well grounded with a 4-gauge braided copper cable connected to an 8-ft copper grounding rod. Yet, in 2 years of operation I've had three instances of lightning damage to the sensors and indoor display. The connections from the junction box at the tower base to the sensors at the top are made with a 7-wire bundle of solid 18-gauge individually-insulated copper wires. This wire bundle is plastic covered, but it is not electromagnetically shielded. Is it possible that the lightning discharge through the tower is inducing a damaging current in these wires? The 200-ft run from the tower to my house is made with 50-wire 24-gauge telephone cable (2 wires per circuit, 36 spares) and is buried from 6 to 12 inches deep inside a plastic conduit. Can this buried cable be affected by ground currents from the lightning discharge? The wind direction lights on the indoor display are powered by an external step-down AC transformer plugged into a regular 120 Volt outlet. This transformer has also been damaged each time, but none of the other appliances on the same house circuit have been damaged, so I don't think the jolt is coming from the 120 V supply.

I'd appreciate any advice from you radio folks out there. I'll try anything not too expensive or ridiculous, including grounded conduit on the tower or spiritual incantations. Thanks in advance.

>: indiscernable.
>
>: Questions:
>: How can we get rid of this?
>: 1) Would something like a lead box around the actual CB radio eliminate
>: this?
I have had simular problems. They have always got a lot better if every
thing is grounded correctly. First make sure the CB rig has a good short
path (less than 5 foot if possible. Make sure that all the computer stuff
uses a grounded(3 prong ac plug) and make sure that the ground wire on
the house wiring goes to ground. If this hasen't fixed your problem.

Disconect every thing from the computer and turn on the computer then
add each perrifial(sp) and turn it on. This should find the problem.

I think that fixing the grounds will probably fix your problem. It always
has for me using some pretty sorry instaltions. In one appartment the
computer was about 6 feet from the antenna and they were both on the
same breaker. I never got rid of the noise but I got it down low enough
that I could operate.

Good luck

ARRL Bulletin 77 ARLB077
From ARRL Headquarters
Newington CT October 3, 1994
To all radio amateurs

SB QST ARL ARLB077
ARLB077 Morse exemption denied

The FCC has denied a petition that proposed exemptions from Morse code exams for people age 65 and older.

Guy A. Matzinger, KB7PNQ, argued in his petition that old age results in diminished faculties, and equated those people 65 and older with the severely disabled in terms of passing a CW exam. He proposed the exemption for speeds above 5 WPM.

The FCC said that similar petitions had been denied in the past, because the current Amateur Radio license structure was based on ''the desires of the amateur service community,'' based on thousands of comments on previous petitions. The Commission also noted that its rules already provide for Morse code exemptions for certain recognized disabilities.

Matzinger introduced the results of a survey he conducted that said 63 percent of those he surveyed supported such an exemption. The survey, the FCC said, provided an age profile of those surveyed but did not say how many people were surveyed.

Although the petition got the usual public notice, the FCC said it received no comments on it.

Matzinger is a 67-year-old Technician class licensee who lives in Cheney, Washington.

ARLB078 Tech license renewals

ZCZC AG43
QST de W1AW
ARRL Bulletin 78 ARLB078
From ARRL Headquarters
Newington CT October 3, 1994
To all radio amateurs

SB QST ARL ARLB078
ARLB078 Tech license renewals

If you hold a Technician class license issued before March 16, 1991, then you automatically are a Technician licensee with HF privileges (a ''Tech Plus'').

In some recent instances the FCC has processed the renewal or modification of such a Tech Plus license but has mistakenly issued a ''Technician'' (no-code) license. (Since June 8, 1994, new and renewed Tech Plus licenses have been clearly labeled as such).

If this has happened to you, do the following:

Write to the FCC, explaining the situation, including your current license status, with effective date. Include copies of both your ''before'' and ''after'' licenses.

If you no longer have either a copy or the original of your previous license, say so in your letter.

Send this to FCC, 1270 Fairfield Road, Gettysburg PA 17325-7245 (or fax 717-337-1541). Keep copies of all your correspondence with the FCC.

Expect the matter to take four to six weeks to be resolved. In the meantime, you may continue to exercise ''Tech Plus'' privileges.

> *reasonable* cost please let me know

I bought a Yaesu plug and lead from HRO, for some $7 or so.

It turns out that the same power plug is commonly used on Panasonic portable CD players (and maybe others). You may find the plug in some of the cigarette-lighter power adapter kits for CD players.

Last I checked, Radio Shack indeed did not carry that connector. They probably will before long, since they seem to have all the other ones, and they will need to add it to their CD connector kits.

>presence mostly due to constant exposure over time during real emergencies.

Very good. Your audience was perfect - they already understood our value!
This is not what I am talking about, that is not the place where people will
laugh at you. There are many communities where this is just NOT so.

>But to parallel what Clark is saying, If I was trying to make a presentation
>to the local garden club, I'd have to go alot further, and into a lot more

Well, unfortunately, I am usually addressing the local Planning Commission,
too. And, there are not the well integrated RACES programs going on in
most communities I have worked in. And, my presentation is very good,
usually bolstered by some ARRL person (last time by our Vice Director
here) who can speak directly to the issues with personal experience.
This does not always do it. Not in our local communities.

The point I am trying to make is that we, as hams, do not have a special
place in the hearts and minds of the general population - and that we must
understand that, and treat the general public with respect for their
opinions, yet we must help to show the true value of ham radio to those
who might understand. This is very important, especially with the
current commercial pressure to take over some of our spectrum - there
is no constitutional right to ham radio. There is no constitutional right
to have an antenna. If, tomorrow, congress decided that ham radio was not
a valuable public resource (look at the other silly things they do :-)
- we would be past history in a minute.

That is my point. It is not to our benefit to take the "we have rights -
we're the best even if you don't believe it" approach here. We could lose.
We need to be constantly aware of the reality that the general population
does not necessarily see ham radio as a valued national resource - and I
believe we need to work, little by little, to change that and show our
value to the community.

171. 2nd Floor Ground or No Ground?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 21:51:14 UTC
From: jmesser@satelnet.org
Message-ID: <36puci$4dl@sefl.satelnet.org>
Source record: 259102

I've recently moved into a new house, and my shack is now on the 2nd floor. This new location has provided me with few questions, one of which includes the ground for my rigs and antenna.

Some folks say to keep a ground, even though the ground might be as long as 40 feet. Others say to do without a ground completely.

Still others suggest using the existing ground that is used in the house's electrical system. To confuse things further, I've also seen the artificial grounds that are advertised in catalogs (MFJs, for instance).

So, what to do? What options do I actually have? What are others on the 2nd floor doing? Any suggestions would be appreciated.

178. IPS Daily Report - 03 October 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 23:15:17 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Oct3.231517.26583@ips.oz.au>
Source record: 258986
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 OCTOBER AND FORECAST FOR 04 OCTOBER - 06 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 02 Oct
Daily Proton Fluence >1 MeV: 9.9E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 2.9E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Oct 05 Oct 06 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Oct: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: major storm

Estimated Indices : A K Observed A Index 02 Oct
Learmonth 50 4456 7444
Fredericksburg 70 12
Planetary 65 9

Observed Kp for 02 Oct: 1012 2324
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Oct 50 Minor storm
05 Oct 30 Active
06 Oct 18 Unsettled
COMMENT: IPS Geomagnetic Warning 5 was issued on 1 October and is
current for interval 4-6 October. Magnetic activity due to coronal
hole. Activity expected next two days.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Oct normal normal-fair normal-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Oct poor poor poor
05 Oct fair poor poor
06 Oct normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
03 Oct 24 near normal until local night when depression of
30-40% were observed

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
04 Oct -5 About 25% below predicted monthly values
05 Oct 10 About 15% below predicted monthly values
06 Oct 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 3 was issued on 2 October and
is current for interval 4-6 October. Ionospheric depression occured
day earlier than expected. Continued degradation expected 4-5 October.
No depressions were observed at Townsville station. Northen Australian
communications should continue to use October Tindex of 20.

179. Looking for 8051 C compiler

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 23:38:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E90177E@smtp>
Source record: 259169

All,
if everyone knows of any shareware C compiler for the 8051/8035 et al series of micros, available via a BBS (possibly) or on internet (only have e-mail access) please let me know. If need be, I can write in assembler, but would rather not.
Thanks a million,

Peter, KC1QF

180. noise bridge kits?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-03 23:44:49 UTC
From: dave@flowserver.stem.com
Message-ID: <9410032342.AA29779@flowserver.stem.com>
Source record: 259120

Greetings! I'm putting together some hf antennas, and due to their nature, I am unable to tune them manually (tuning rig, seeing how far off I am and adjusting). What I really need is a noise bridge or SWR analyzer. Does anyone out there in netland know of any kit manufacturers that make these instruments. I'm broke and can't really afford the preassembled variety currently available. Any help would be appreciated.

Hi there:
I travelled to the Kingdom 12 times during the late 70's early 80's. Since then, I've learned that there is a club station at the Dhahran airport. You didn't say where you would be but, it's worth a shot. A former neighbor of mine, N5DM, Don Mayhall, operated from there in the 80's. I don't know where Don is now. Last I heard, he was a radio operator onboard some ship line. You might check the callbook for his current address and snail-mail him some questions.

Good luck, and 73 de W5EZM, "A.C." in Houston

>idea of the major factors involved here?
>tnx, beavis (beavis@io.com)

In transformers using high-permeability ferrite cores, it doesn't make much difference. The object is for the flux created by one turn to link with all the other turns. When the permeability is high, the flux is pretty well confined to the core, so the linking takes place regardless of where the turns are.

With low-permeability materials such as type 2 or 6 powdered iron, the flux isn't as confined, so pushing the turns together noticeably increases the inductance. Some measurements I did on an inductor of 8 turns on type 2 powdered iron showed a 43% increase in inductance when evenly-space turns were pushed together. The Q ended up about the same as an inductor of equal inductance with more turns evenly spaced around the core. If you have a second winding on this type of core, the amount of coupling between windings will be affected greatly by their positions on the core.

BULLETIN 346 Category: Management - Overview:
Release Date: October 3, 1994

RACES, What's That?
Ever see that question in the eyes of someone who has
just heard that term, possibly for the first time?
Well I do, far too often. At State OES there is a
constant stream of officials from an agency somewhere around the
country. Sometimes the introductory remarks of the staff person
that brings them in will include a phrase like "this is our
RACES". All too often, I perceive the visitors mental question,
"RACES, what's that?". Sometimes it's very obvious and asked out
loud. Other times it may remain unvoiced. It is usually
accompanied by a slight change in the way their head is held as
their "body language" projects that mental question to a phrase
that has little or no meaning to that person.

So how do I respond? Well, that's the interesting part.
When the explanation avoids the use of the term "Amateur" I find
that they leave with a good understanding of our Auxiliary
Communications Service. But if the term "Amateur", as in Radio
Amateur Civil Emergency Service", is spoken, there is almost a
guaranteed response; one that few of us would appreciate. That
response is a far too often 'shutting down' of further curiosity.
Something in the term "amateur" triggered an association that
stifles further openness or interest. Oh, they may be polite and
listen but its easy to tell they have already closed down their
mental process to what is being said.

Those who work with people are aware that interpersonal
communication is fragile. That process begins with a thought in
your mind; then you express it in words so I become aware of it

as well. My senses hear or see what you say, along with what you don't say, which usually shows up as unspoken "body language". In response my mental process INTERPRETS that sensory input and the result becomes your "message" as I received it. It may be close to what you had in mind as you spoke your words, but it may be so far removed from what you had in mind that you'd never believe it could be that different. If somewhere along the way something in your words or your silent body language triggers another image or thought in my mind, I may be totally distracted and never hear the rest of what you say. In a way it's a wonder we humans communicate to any great degree at all. Probably even marvelous .

So how does that apply to the topic "RACES, What's That"?
Well, check next week for the sequel!
EOM.

RACES Bulletins are archived on the Internet at ftp.ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

186. FOR SALE: C64/VIC20 Combo

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 01:03:40 UTC
From: mikest@comtch.iea.com
Message-ID: <36q9lc$lpf@krel.iea.com>
Source record: 259127

** FOR SALE ** -- Commodore 64, vic 20 & accessories --

$50 Commodore 64 + Commodore VIC 20
$25 koala sketch pad
$35 1541 floppy disk drive
$3 1650 300 bd autodial/answer modem
$25 Cardco Plus Printer interface
$25 tape drive
$10 3k ram expansion cartridge (VIC20)
software for each.
+ bbs software for c64
+ printshop
+ many games
====
$173

or .. $125 + shipping takes it all

Run a bbs or play its many games. There's lots of software
out there for the 64. Great for HAM radio packet users.
Good color graphics. Great for kids to learn on. The VIC 20
would be ideal for a younger child that wants to learn while
an older child or adult learns to use the 64.

Please contact mike KB7PNT (mikest@comtch.iea.com) with inquiries.

187. HT recommendations?

Z>I'm a recently licensed amateur contemplating my first HT purchase.
>Leading contenders are the Yaesu FT530 and the new Kenwood TH79.

Don't take any of our advice on HT choices - especially since
you've already performed your "market research" and know what
you need as far as bands are concerned!

Go to a local dealer and play with these two units. They're
both marvelous units. Why Standard isn't on your Top Three
List, I'll never know <grin>. But, seriously, it's subjective
thinking time: how does each unit "feel" in your hands? Easy
to use keypad? How's the instruction manual? Are you able
to program quickly, without having to call the salesperson
over every step? What are your power requirements? Are you
living "right under" repeaters in your area, so that the
normal battery pack will be all you need, or do you need
longer lasting/greater power capability? (If so, check
out the 2.1AmpHour QUANTUM HAM Battery - it'll cost you
less than a second high-power battery + rapid charger.)
What accessories do you think you need - and are they
available for the unit of choice?

Don't take our owrd for anything - your question usually
results in a popularity contest message thread. You have
done your homework - now get out there and handle these
beauties!

> James - KE4LAY

James:

In the real world, you will find that some kind of ground is needed.
If you develop any serious shack, you will need a good ground. It will be
difficult to run 100 watts into any of several antennas without good ground.

You will be better off if you can use antennas that are tuned
precisely to the band you use the most. This will allow you to run barefoot
into the antenna, thus getting most of the RF out of the house and away from
the shack. I would start with this. Any tuners will only disguise problems
you might have.

A good ground on a second floor is difficult, but it can be done.
Just takes some work, which is some of the fun in ham radio.

Install a good ground, use barefoot antennas if possible, and consider using a "line isolator" in the transmission line at the rig site.

Please Email me with any thoughts you might have. Hope I've given you something to think about.

Asterisk indicates predicted value.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.
The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide. These
records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later. This means
that the exact observed value of the monthly T-index is not available until
some months later.
The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

2.1 Comments on Solar Activity.
Solar activity was at low to very low levels throughout September. No
significant variation was observed in the 10cm flux values during the
month. The peak value for the month of 95 was observed on 6 September.
Data was unavailable for 3 September.
==========
3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS

7-9 September Unsettled to active levels, with one minor storm
period from 15-18UT on 9 September. This activity was
associated with a coronal hole.

3.1 Comments on Geomagnetic Activity.
Activity was at mostly quiet to unsettled levels throughout the month. The peak
A index for the month of 28 was observed on 8 and 9 September.
==========
4. IONOSPHERIC DISTURBANCES (for Sydney)

DATE MUFs

2 September MUFs were 30-50% enhanced from 17-19UT.

13 September MUFs were 15-30% depressed from 08-11UT and at 15UT. Spread
F was observed during local night.

20 September MUFs were 30-50% enhanced from 06-09UT and 30-50% depressed
from 21-22UT.

22 September MUFs were 30-50% enhanced from 13-20UT.

24 September MUFs were 30-60% enhanced from 15-21UT.

25 September MUFs were 30-60% enhanced from 14-20UT.

4.1 Comments on Ionospheric Conditions.
No significant depressions were observed during September. Enhancements
around local dawn were common towards the end of the month and night-time
Spread F was observed intermittently throughout the month.

192. Looking for Atlanta, GA area Ham Clubs and Elmers

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 02:45:16 UTC
From: herbr@netcom.com
Message-ID: <herbrCx4nnH.80t@netcom.com>
Source record: 258995

I have a friend that lives in the Atlanta Georgia area that is interestedd in finding out about ham radio. I am trying to find a listing of some really good ham clubs in the Atlanta area, and possibly someone that might be able to offer a prospective ham a little information and encouragement.

My friend is a technically oriented guy that works professionally with computers. He is a perfect candidate for at least the no code tech, but with the right motivation, could easily move on.

If you can be of any help I would appreciate hearing back from you.

Thanks.

>If you develop any serious shack, you will need a good ground. It will be
>difficult to run 100 watts into any of several antennas without good ground.

Don't worry about a ground. My shack is on the 3rd floor, and I run
up to 700 watts on 160-10 m with no "RF in shack" problems. I guess that I am
connected to the AC power ground system, but I don't think this does much for
me. My signal is clean enough that in contests I can transmit on one band
while listening on another at the same time. The antennas I use are a 40m
dipole and 40m delta loop, both fed with ladder line, and a 160m vertical fed
with coax. The dipole and loop are connected to tuners and used on multiple
bands. I do have heavy wires running to several ground rods that I use
to ground the antennas when not in use (lightning), but connecting this ground
has no apparent effect when I am operating.
My advise: use balanced antennas (no end-fed wires), and be sure all of
your equipment is grounded together (I put a copper pipe running on the back of
the operating table as a ground buss). Some external ground to connect your
antennas to would be a good idea for when you are not using them. If you do
have "RF in shack" problems, try connecting a 1/4 wave radial to your radio
for the band that is giving you problems.

73,
Torsten N4OGW/9

> a licence before selling the handitalkie??

I'm pretty sure that radio transceivers are one of the few remaining
"personal-resposiblity" items left in the US. :-)

You can pretty much own (or build) whatever you want, but the *use* of
it is regulated. For example, you can legally modify your radio to
transmit out of band, but you break the law the moment you transmit
there (outside of an emergency).

I, for one, am glad it's this way. I had my FT-530 for about three
months while I waited for my license to arrive. Since there was
little else to do with it other than read the manual, I got to know
all the features of the radio pretty well.

I bought it from the local HRO, before I had even taken the first
exam! They got a pretty good feel for what I was up to, and didn't
have any problem with selling me the radio.

The following was posted on comp.robotics and sci.electronics.
I would like information about who makes these boxes and where
they are available? Also, is the price $10 real or a typo (maybe $100?)

73.
Balu

: : I use LAWN boxes for this type of application. They can be had at
: : $10 a box at most HAMfests. They have a channel width of 38400 baud, but
: : due to protocal they can only achieve a 19,200 baud throughput. They also
: : have a little bit of a lag in transfer. This can be disasteris in some
: : control applications.
: Do you need a HAM license to use these boxes? SS at 900MHz does not, I think.
: Can you provide more info on LAWN boxes?

900 MHz band is allocated for the use of HAMs and commercial low power
applications. Since Spread Spectrum needs much less signal power it falls
under the power considerations for, and the FCC has specifically assigned this
type of application to 900 MHz. HAMs are allowed to run more power though.

The LAWN boxes are white bricks. They have four LEDs on the front
and a RS-232 port on the back. The radio is 900 MHz SS. The internal
protocal is AX.25 (modified), and the antennas are also internal and of
two different polarities (it switchs as needed). You provide 12V at 200+mA
and a serial port connection, and it just goes.

73,
Shawn

Commercial Radio Exams at Hosstraders

** MROP, GROL, GMDSS, Radar and Telegraph exams in Rochester NH **

** Sat. October 8th 1994 **

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at the Hosstraders Hamfest
in Rochester NH on Saturday October 8th at 1:30 PM.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

Our next commercial exam session will be held at 10AM on
Saturday November 12th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 per license examination fee. Bring the ** original **
and a copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For all licenses except the GROL
there is an additional $35 regulatory fee, you must attach a check
made to the FCC to your successful application. For the
Telegraph exams bring 2 passport style photos in an envelope to
attach to your application

* The FCC has delayed the imposition of a regulatory fee on GROL
applications pending congressional instruction on how to treat lifetime
licenses. !!!

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the
GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West
covering the MROP and GROL exam material is now available at
Radio Shack.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international

radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard ships carrying passengers for hire and certain aviation and coast stations. Large ocean going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment. A Radiotelegraph Operators Certificate is required to be a radio officer aboard certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the required class code exam. Bring your original amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

198. Hosstraders Hamfest Fri Oct 7th - Sat Oct 8th ** Rochester NH **

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 05:20:23 UTC
From: w1gsl@ATHENA.MIT.EDU
Message-ID: <36qomn$hq0@senator-bedfellow.MIT.EDU>

Mainly because I am sure to get lots of requests after the last
post....

The Hosstraders hamfest will be held in Rochester NH on Fri Oct
7th and Sat Oct 8th this year. When it opens at 9AM Friday, the
admission price is $20 per person. At 3PM Friday the admission drops
to $5 per person. The admission is good for both days.

Overnight camping is permitted for an additional charge.

The swap will be held in the Rochester Fairground. It is
located 2 blocks south of Rt 202, just off Rt 16.

From the Boston area take I-95 North to the Everert Turnpike,
(RT 16) take it North to exit 13, go toward Rochester center.
Look for Hosstraders signs.

The 3-Hr Ap Indices for 02 OCT 94 are: 3 2 3 9 6 13 8 31
Greater than 2 MeV Electron Fluence for 03 OCT is: 3.1E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low.

Solar activity forecast: solar activity is expected to be
at very low levels.

The geomagnetic field has been at quiet to unsettled
levels until 02/2230Z when activity increased to minor to
severe storm levels. This activity is believed to be due to a
favorably positioned recurrent coronal hole feature. The
greater than 2 MeV energetic electron flux has been mostly

normal to moderate. At about 03/1400Z the flux exhibited a rapid rise to peak in the high range at about 03/1600Z.

STD: A full-disk Yohkoh x-ray image showing the fairly large size of the northern polar coronal hole extension which appears to have affected geomagnetic activity over the last 24 hours, has been appended below.

Geophysical activity forecast: the geomagnetic field is expected to be at major storm conditions on day one then becoming minor storm levels the second day of the forecast. Active conditions are expected on day three.

Event probabilities 04 oct-06 oct

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 oct-06 oct

A. Middle Latitudes
Active 20/30/30
Minor Storm 30/30/30
Major-Severe Storm 30/20/20

B. High Latitudes
Active 20/20/30
Minor Storm 30/40/30
Major-Severe Storm 40/30/20

HF propagation conditions were below-normal to occasionally disturbed and near-useless for the high to upper-middle latitude paths and particularly those which crossed the night sectors. Lower middle and low latitude paths were also slightly below-normal with near-normal to poor propagation reported. Some geomagnetic and auroral ionospheric perturbations may have been sufficiently strong to produce VHF backscatter propagation on frequencies in excess of 100 MHz between 00:00 UTC and 09:00 UTC. Periods of strong geomagnetic and auroral activity are expected to continue during the local night sectors and result in continued disturbed propagation conditions, particularly on transauroral or transpolar paths. Conditions may begin improving slightly over the next 24 to 36 hours, although nothing particularly substantial is expected until about 06 October. Improvements will be slow.

STD ESTIMATED CORONAL HOLE BOUNDARY LOCATIONS DERIVED FROM YOHKOH X-RAYS

VALID AT 23:30UTC 02OCT94

"!H!" = Highly probable coronal hole locations.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I was lucky enough to find a couple of scrap pieces of Ethernet plenum cable at at precious metal reclamation scrap shop. It is type CL2P cable. I found some "GENERAL INSTRUMENT PLENUMAX 2280 E82833 200 DEG. C 12 AWG (UL) TYPE CL2P ETHERNET SHEILDED". Sure, it is designed for ethernet applications. But, it is 50 ohm, teflon foam dielectric, solid copper 12 awg center conductor, dual high density tinned copper braid with dual foil sheild, and possibly teflon jacket. It is about RG-8 size and fits PL-259 and I would bet type N connectors very well.
The reason I bring this up is to inspire some creative use of resources. Although the Thick Ethernet is becoming less common, there are probably many network companies that throw away 50 to 100 foot lengths of this stuff every week.
Bye... Ted..

I was able to find it at the local Radio Shack, though the guy did have to search for a while to find it. I already owned the lighter adapter with several different tips (to use with other devices too), but none of them fit the FT-530. However, they sell odd-sized tips separately. The one you want is called "yellow tip"; the numbers on the card in the bag with it are
270-1575
2194-020
2206-055

I suspect that the first one is the RS part number (though it's 0:50 PDT so I can't call them to check). Price was $5.95, I think; pretty steep for an adapter, but now I don't have to worry about having a dead battery when I'm out crusing around.

Source record: 258997

Hi Bill.

I have been using an FT-5200 with the remote head option for about a year now. I'm afraid I can't recommend them for the following reasons:

1/ I feel that I was totally misled about the function of the remote head. Although the head can be easily detached from the head mount, the transceiver needs to be unscrewed from the remote cable. Worse still, the securing screws aren't 'captive' types, and are therefore easily lost. Can anybody explain the sense in designing a transceiver with a quick-release head, but no quick-release transceiver?

2/ If you find (as I did) that the 3 metre cable ain't long enough, you can't just buy the longer cable - Yaesu only sell the longer cable with another remote head unit. Serves me right for buying a new car I 'spose!

3/ The transmitted audio of the FT-5200 is awful. I've taken the rig back to the importers, but the best they could do was to crank up the peak deviation to 8 KHz - any less and my dulcet tones weren't audible to other mobiles above their own vehicle noise.

4/ The receive performance, particularly on UHF, is atrocious. 70cm is unusable in the centre of London due to breakthrough from other services on UHF (taxis, couriers, broadcast links, etc...) Even locally (a small village on the outskirts of Slough), 2m suffers from breakthrough from a paging system.

5/ A fault that I've not yet experienced myself, but has been reported by several friends - they have a nasty habit of popping their front panel lamps if you start the car while the rig is switched on. Having had previous Yaesu rigs that have totally locked up (FT-230 and CPU-2500) when starting the car, I always switch the rig off first.

205. TH79E - Kenwood HT Question and mod list

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 11:28:52 UTC
From: tnfechne@cip.informatik.uni-erlangen.de
Message-ID: <36re9kE3af@uni-erlangen.de>
Source record: 259002

Hello out there

just bought an kenwood handheld trx th79e. it is a fine handy,
but i wonder if there is no charger build in.

the dealer said, the accu is automaticly charged and controlled not
to over charge it! the manual says the opposite!

now the question: may i leave the accu in the trx while operating with it?
cause it damages to it if i put the trx inclusive the
battery in it on a dc-surply all the time?

please answer
thanks so long

ps:the following text is from the internet and from packet radio
in which i collect any information about hidden functions in the TH79.

enjoy it!

CHANGING THE BANDS:
==========
Press the F-key andthen press the LOW-button to toggle between Air-Band
(340Mhz on the VHF Band) or the Phone-Band (850Mhz on the UHF band) and
the amateur radio band.

CROSBAND-REPEATER:
==========
The TH-79 does go into X-Band repeat. Press the "F" key then the "MONI"
key to enter repeat mode. Use the same to return to normal. There is a
10 min transmit limit so it's not useable for long duration monitoring of
a continuous transmission. That's understandable in light of the number
of horror stories I've heard of people frying their HT's in repeat mode.

CLONING THE TH79E
==========
To clone the memory contense of two radios on the air. The clone procedure
is same with all others. (use of DTMF tones, do not disturb transmission
etc.) You must take care that both radios are really same: both have
extended range or not, both are E-version or not etc.
It will cause some problems if you try to clone i.e. an E version
without expansion into a A- or J version.
If you have both radios please hold down the -0- key / PAG L Key when
you switch on the radio. So you see the letters CLONE on the display.
Please push the ptt on the radio which has to be the master.
It takes a time to transmit all memory with maybe names, call sign etc.
After Clone is finished you see END written in Display. Best is to switch

of both radios. After switching on again you will have two same radios !

EXTENDED RX/TX
==========
Thats all...Don't cut the green wire, or install any jumpers as before.
This mod is the official one from Kenwood, taken from a data sheet put out by
them.
1. Open the unit by removing three screws from the back and one under the
DC power input cover. Carefully separate the front and back pieces.
The two case halves may be disconnected by pulling the wired plug and by
prying the brown latch on the ribbon cable connector up enough to
release it.
2. On the front PC board in the lower right corner as viewed from the rear
with the knobs pointing up there are seven spots for diodes in a row,
with one diode missing.
| o o o o x o o |
_____________|
2 3 4 5 6 7 8
The numbers are D302-D308, left to right, with D306 missing.
3. Remove diodes D304 and D307.
Now you must have this:
| o o x o x x o |
_____________|
2 3 4 5 6 7 8
5. Reassemble and apply power. Mod complete.
Now the ranges:
67-174.995 and 400-511.995 RX
136-174.995 and 400-511.995 TX.

PS: Just cutting the green wire by the recharging jack is the
MARS mod.. Don't cut if you intend to do the above mod..

Discription of the diodes:
==========
In my HT diode D303 are not installed, green wire cut. RX as wide as
possible (69-179Mhz) and TX from about 130 to 179 MHZ. No crossband repeater.
Now I tried to modify the handy, but i was not carefuly.
I removed D305 and the Bander goes in the Lock-key modus:
All keys are locked in cases of the Lock-switch.
QRG disapeared and the channel nummbers shine on the display.
Then I put D307 to the place I removed D305:
Now I had the TH79A version with no light, but a call channel installed.
All functions are the same as before, but TX was only possible on the
amateur radio bands. Automatic shift keying as discriped in the manual
for the american version. (Not to usefull in Europe :-), but you can
change the QRG's now....)
Not the situation on the TH79A I wand, I remount diode D306 to the location
of diode D307 to change to TH79E back. And now the work was finished:
Transmitting as descriped above, no lock function activ, crossband repeater
enabled. THE MENU-SETTING 18 are activ: "Answer back function" for the
paging mode: transmitts an code back to show that the call received.

But the continues TRX showing up later in this doc has not been verifyed.
The purpose of diode D302 was not to be able to find out because the first
diode I wand to unmount had been damaged ;-(

Here is the MARS/CAP modification
==========
1. Remove battery.
2. Open case by first removing 3 screws (#00 Phillips) on back and 1 screw
on side hidden underneath the rubber flap covering the DC power jack.
Gently pry apart starting at top; BNC connector will move with back,
knobs with front.
3. Spread unit out. Wires will "hinge" on the side with the PTT button.
4. Looking on the back of the keypad (front) half, locate green wire on
upper left, just below the CTCSS decoder module.
5. Neatly cut this green wire, and tuck back in so ends won't touch each
other or other components.
6. Reassemble.
Programmed memory will be lost since the CPU will notice the strap change
and reset itself.

Before: VHF RX - 118.000-173.995 TX - 144.000-147.995
UHF RX - 438.000-449.995 TX - 438.000-449.995
After: VHF RX - 118.000-173.995 TX - 142.000-151.995
UHF RX - 420.000-449.995 TX - 420.000-449.995

If I read the schematic right, the green wire corresponds to "W301", which
also serves the same purpose as removing "D308". More research needs to be
done on other mods; I'm especially interested in extending UHF receive beyond
450. There is a row of diodes right below the uC which appear to be D302

Remote Base Operation with Kenwood 732/733
==========
Kenwood has now simplified remote base operation of their mobile rigs
with the TH79.

I will not give a step by step on how to control the mobile rigs, since
they are different. Hoewever, to really understand this feature, I would
first get to know the remote control feature on the mobile very well. This
makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the
dual bander's keypad now becomes a function pad. Pressing certain keys
enables or disables functions on the mobile rig by sending the DTMF
sequences for you.

Please note that all this fuction does is send the DTMF tones over the air
to control your mobile rig. I have not made a list of what each key does,
but as the 79 sends the DTMF tones, the display will indicate the function.
(i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

"The "RC" function is configured to directly control radios such as
the TM-732. In fact, if you look at the layout of the microphone remote
commands for the 732 it very closely matches the key assignments for of
the "RC" mode. Since I have a TM-732 installed in my car, I had a chance
to try this out and it's VERY convenient. Everything from direct frequency
entry with the "F" key to enabling X-Band repeat. I'm really surprised
they aren't marketing this feature of the radio."

Measured specifictions of TH79
==============================

Band - VHF --
Frequency Sens (uV) Power Mode
--------- --------- ----- ----
108 4 - A3
110 2 - "
115 .75 - "
120 .40 - "
125 .30 - "
130 .30 - "
135 .30 - "
140 .12 2.9 F3
145 .12 2.9 "
150 .13 2.8 "
155 .15 2.4 "
160 .18 1.9 "
165 .20 1.45 "
170 .21 1.10 "
175 .30 0.85 "
179.995 .35 0.70 "

Band - VHF (2) (set to 300Mhz) --------------------------------
Frequency Sens (uV) Power Mode
--------- --------- ----- ----
300 50/75 - A3/F3
320 4/20 - "
340 .3/.6 - "
360 .2/.5 - "
380 .2/.6 - "
400 .2/.75 - "

Band - UHF --
Frequency Sens (uV) Power Mode
--------- --------- ----- ----
400 11 1.0 F3
410 4 1.5 "
420 1 1.85 "
430 .2 2.2 "
435 .12 2.3 "
440 .10 2.5 "
445 .10 2.5 "
450 .10 2.5 "

455 .15 2.3 "
460 .16 2.3 "
465 .20 2.0 "
470 .45 1.8 "
480 1 1.6 "
490 2 1.3 "
500 6 1.1 "
510 no RX over 509 0.8 "

BTW, close inspection of the RF deck in my radio shows no obvious
missing parts. I didn't remove the board to check the other side, but
my suspicion is that the 800 MHz parts are installed. I'd be interested
in input from others on that. So far I've not discovered how to make it
display any 800 MHz frequencies though."

CONTINOUS TRX
=============
Pressing the VFO-key and the PTT key after a short beep and waiting a few
seconds with these two keys pressed will bring the th-79e into continous
transmit mode for about 10 minutes until TOT ends.
This will also work with the MR key.

end of the hidden functions

don't be surprised if you get told the same things you've been told here by pilots, aircraft techs, radio makers, etc....of course, if there's something new, pass it on...(ITU agreements? International rescue agreements? Others?)

ITU shindig in town on navigation receivers (but those are mostly FM so they're OK, right??) and digital broadcasting..and how to keep 'em from interfering, etc.

> a quick-release head, but no quick-release transceiver?

Sure. It's for security purposes. The body of the transceiver is expected
to be permamently mounted in the trunk or elsewhere out of sight; the head
pops off so people won't be tempted to steal it. I don't have mine remoted,
but I pop the head off a couple of times daily and stash it out of sight.

>3/ The transmitted audio of the FT-5200 is awful. I've taken the rig back
> to the importers, but the best they could do was to crank up the peak

I've always gotten very *good* audio reports from other stations. Don't know
what else to tell you.

>4/ The receive performance, particularly on UHF, is atrocious. 70cm is
> unusable in the centre of London due to breakthrough from other
> services on UHF (taxis, couriers, broadcast links, etc...) Even
> locally (a small village on the outskirts of Slough), 2m suffers
> from breakthrough from a paging system.

I've never had any intermod or receive performance problems of any kind on
either band with my 5200, and I drive daily through areas that sent my
Alinco DJ-580 into an intermod frenzy before I sent it back to have it
desensitized.

Message-ID: <dclydesdale.1.2E915BF7@bfsec.bt.co.uk>
Source record: 259008

Hi,

Just wondering if any one else is having problems with valematic automatic remote control garage doors? I seem to have real probs on 80m especially on cw. The garage door actually starts to go up and down!

20m is also a problem but to a much lesser extent - the courtesy light just flashes on and off as I go key down.

I run about 100w on cw on all hf (EX warc) bands from an old FT101e into a g5rv/2 on 20 m and a 60ft length on wire on 80m.

Any advice would be most welcome,

Keith.

Source record: 258885

Near Outer Space Transportation System (NOSTS-1)
Balloon Launch - Clear Lake Amateur Radio Club
Sunday - October 9, 1994

Clear Lake Amateur Radio Club announces the maiden flight of NOSTS-1 (Near Outer Space Transportation System- 1) utilizing a 12 foot diameter helium balloon as the launch vehicle. NOSTS-1 is an amateur radio experiment which will carry various payloads in a package weighing less than 6 pounds. All interested hams are invited to participate.

The payload consists of:

* 2 meter packet on 145.75 MHz simplex - the node name for digipeating is NOSTS-1, the mailbox callsign is KJ5MX-6, the beacon IDs as KJ5MX-3.

* 10 meter voice beacon on 28.322 MHz Double Side-Band with an ID interval of 33 seconds.

* Beacon on 29.420 MHz sending "CW" beeps that correspond directly to the outside temperature. At 70 degrees Fahrenheit the beep rate is approximately 200/min. To calculate temperature from beep rate the formula: Temp(degrees F) = [0.56853 X (Beep rate)] - 38
The antenna for this device is a 2 meter dipole cut to enhance the 5th harmonic at 147.10 MHz for direction finding purposes.

* Beacon on 224.72 MHz for direction finding purposes only.

* Potential secondary payloads may include a 10 GHz gigaplexer beacon and a 2 meter uplink (147.435 MHz), 70 cm downlink (440.95 MHz) FM repeater. Final announcements on these payloads will be made on launch day.

The Clear Lake Amateur Radio Club Balloon Launch Team wishes to thank Andy MacAllister, WA5ZIB and members of the South Texas Balloon Launch Team for assistance, advice, and use of 220 MHz beacon & 29.420 MHz fireball transmitter for this launch.

An informal simultaneous HF (7.155 Mhz or up for QRM) and UHF (442.750 SE Houston | 444.275 MHz NW Houston repeaters) net will be held at 7PM on Saturday October 8th for final updates. The 40 meter net on the same frequency will be active immediately before and during the flight.

The launch site will be west of the Houston area and the direction of flight will be from west to east. Coverage may extend several states on some modes and even coast to coast if 10 m propagation is favorable. Reception reports including frequency, time, and YOUR location are encouraged.

Could anyone enlighten me on "low power contest" for distance
transmissions.

I seem to recall some "Hamfest" communications going 100's or thousands
of miles on less than 1 watt transmit power (and not at microwave
frequencies w/ large Parabolics either).
I'm specifically looking for "how far" on "how little power" under
relatively ideal conditions for 1 milliwatt and 1 watt.

Thanks in advance,
Direct reply or post appreciated,

Michael Barney
mikeb@tdc.dircon.co.uk

The generally recognized AM calling frequency is 50.4 MHz. This has been the standard since at least the late 1950's.

I worked lots of folks with a Sixer and a wire dipole back in the "good old days". Six is a great band for antenna work, skip, etc.

:> 300Mhz. Under British law... If they are leaking onto our frequencies
:> from the pipe it is thier responsibility. If we interfere with them
:> (even TX on their fundimental) it is their responsibility. Is that the
:> same in the US ?

: Legally, yes. In practical terms, just _try_ to get them to admit that
: it's their responsibility. Succeeding at that, just _try_ to get them to
: do something about it before the neighbors pin your coax, bomb your tower,
: slash your tires and kidnap your kids.

Some cable companies try to claim that they are only responsible for leakage OUT of their system. Part 76.605 requires that cable companies deliver specific quality of service to their customers. Specifically, 76.605(a)(8)(i) requires that in a standard system, the cable company deliver a signal that has at least a 51 dB video carrier to "coherent disturbances" ratio. While this level of signal could cause just perceptible interference, it is a decent-enough picture that most neighbors won't complain.

If anyone is having a problem with CATVI, send a 9X12" SASE with 4 units of postage to the ARRL Technical Department Secretary. Ask for the "EMI/RFI Package" and "EMI/RFI - CATV." The CATV package includes a reprint of the article I wrote for Communications Technology -- the journal of the Society of Cable Television Engineers. Your local cable company will recognize this publication and will give credence to the words therin.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

As early as the 1920s, a U.S. ham set a record for a U.S. to
Australia contact using the (then fairly new technique) CW mode.
(Note: By "new technique" I mean the use of continuous waves as
opposed to spark. Today, "CW" to most hams means "radiotelegraphy"
but *spark* was radiotelegraphy, too. Don't be confused.)
The *input* power was less than 1/2-watt; I'll dig up the info
tonight and bring it in. It's in the book "200 Meters and Down"
which was publihed in 1936.

Since that time, many QRPers have made contacts with only a few
milliwatts, and probably microwatt contacts as well when using
directional antennae.

In article <Cx3sK1.EIp@tandem.com> hausman@patch.tandem.com (hausman_john) writes:

: >Has anyone ever seen anything like this? My transmitter (on certain
: >frequencies) causes the VCR to stop playing.

Many of these problems are caused by common-mode pickup on the coaxial cable or antenna feedline hooked up to the VCR. (A simple explanation is that a common-mode signal is the signal picked up on the shield of the coax, or by both wires of the twin-lead antenna.) Common-mode pickup is also sometimes a problem on the AC wiring.

A quick diagnosis: disconnect the antenna or cable from the VCR. If the problem goes away, it is clearly coming down the antenna lead or cable. Then, if it is a coaxial cable, touch the ground of the F connector on the cable to the ground of the F receptacle on the VCR, without screwing it back on. If the problem reoccurs, it is almost certainly common-mode.

If that is the case, you can cure it by disconnecting the antenna or cable input while in playback, or by putting a common-mode choke on the cable or feedline. The file rfisourc.txt on the ARRL info@arrl.org server (or at the FTP site at oak.oakland.edu) tells you where to buy one. You can also make a common-mode choke from a F-240-43 ferrite core; wrap about 10 turns of the coaxial cable or feedline onto the ferrite core.

If worse comes to worse, try a common-mode choke on the AC line, along with a differential-mode (brute-force) AC line filter (Radio Shack catalog 15-1111).

If the VCR is connected to an antenna, a high-pass filter will often work in place of the common-mode choke. On a cable system, a high-pass filter is not needed unless there is a severe leak in the cable.

226. Scarborough Reef - DXCC status

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 17:05:34 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <36s20u$9hp@reznor.larc.nasa.gov>
Source record: 258895

I just received the new issue of "QRZ DX", a DX information
weekly bulletin, which contained an open letter from
Chip Margelli, K7JA, regarding Scarborough Reef and its
DXCC status. In the letter, Chip implores active DXers to
open discussion on the issue. I feel compelled to add a few words.
Recently, the DXAC voted to change the DXCC rules in
an attempt to define a minimum size for a DXCC country.
I imagine that this was due to the Scarborough application
and the potential for similar applications for DXCC country status.
I've been struck by the
strange attitudes of many hams towards the DXCC institution.
It's certainly a worthly goal for a DXer to work and verify
100 countries. Some may argue it's too easy these days,
given the plethora of "countries" to choose from. Yet, there
seems to be no end to the hams with their compasses and rulers
seeking to find yet another speck of rock as a potential
candidate for DXCC status. To me, this is a pity. It brings
the concept of DXCC into ridicule, particularly from non-DXers
when frivilous, ill-considered applications are brought
before the DXAC for consideration. There is enough political
volatility in the world to ensure that new DXCC countries
will continue to be formed (and perhaps deleted) as countries
fracture or otherwise redefine themselves. It seems unnecessary
to "help" the process along by finding a rock in the Pacific
to call a new DXCC "country".
Chip's arguments for the acceptance of Scarborough Reef
seem to center around the Chinese Radio Sport Association's
efforts in organizing the recent DXpedition. The CRSA's
efforts are certainly commendable, but I fail to see how
the acceptance/non-acceptance of the reef's DXCC status will
impact on the future of Chinese or Asian ham radio growth.
The argument seems wholly fallacious.
Chip states that Scarborough "clearly fell within the DXCC
country qualificiation specifications." But the reef is
barely more than a few rocks, sometimes above water at low tide.
To accept such a landmass as a DXCC country is lunacy and invites
tremendous potential abuse from a myriad of future applications
for any rock that meets the minimum land separation requirements
from its parent country. I'm personally thrilled that the DXAC
voted to revise country size requirements before this issue
gets entirely out of hand.
I'm all for working another new DXCC country. But, let's
use some common sense and not warp the rules of the DXCC.

WOW!

Where did you get this information from?

According to information available to me, the voltage in Europe is not
yet fully stantartized. The standart gradually adopted is *230V*
with one live and one neutral phase. In fact the safety ground and the
neutral phase are connected in house wiring. Putting 110 V on both phases
will certainly produce some peculiar effects.

>It will be a violation if he drives it onto the road. However, if a
>non-ham keys a radio into a dummy load, I do not believe that would
>be a violation.

We know that you need to identify if you transmit, but check out this
wording in Part 97:

\(sc 97.305 Authorized emission types.

(b) A station may transmit a test emission on any frequency
authorized to the control operator for brief periods for
experimental purposes, ...

This sounds a lot like kerchunking defined.

\(sc 97.119 Station identification.
(a) Each amateur station, except a space station or
telecommand station, must transmit its assigned call sign on its
transmitting channel at the end of each communication, and at
least every 10 minutes during a communication, ...

When you kerchunk, it's not really a communication, since you
are not communicating with anyone, so is an ID required?

Dave, KZ1O

p.s. I don't kerchunk, because I know my radio is working already.

Just a couple of weeks ago while out on a walk at night with my 2 meter HT, a garage door started to go up and down while I was transmitting. It actually went about 1/2 way up then came back down. I could see there was no one in the garage (and no one came out, thank goodness!) so I'm sure it was my signal. Ha! Don't know what brand opener they had, though... ;-)

The reason for identifying is for the purpose of clearly making the
source of the transmissions from the station known to those receiving
the transmissions.

If you wanted to follow the ID rule, you could always say "This is
(read the name off of the Radio Shack employee's name tag) testing at
Radio Shack". I'll bet that would get the transmitter disabled.

233. Voltage in France

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 17:52:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E911803@smtp>
Source record: 258999

The voltage in continental Europe is 220V, spread over the two wires. That is, it is 110V per phase with respect to ground. You cant really use 110V from a phase and ground because there are trip circuits looking at leakage current and turn the main CBs off (only in modern houses however).

The frequency is 50Hz.

I built a house in Brussels and had it wired with two separate circuits, both 220V and 110V. The 110V, is based on a transformer of 1KW that divides 220V by 2. I then get 110V at 50Hz. The only effect this has is to cause certain 60Hz devices to burn, namely, and this is the only case, little wall plug chargers that are normally supplied with HTs (my Kenwood TH-21 charger burned). This is because at 60Hz less power is dissipated than at 50Hz, therefore the material the charger is made off can be less expensive thus burning at 50Hz (more heat).

There is no other difference these days, as most household items dont use the powerline frequency for anything (cheap Radio Shack power timers excempted - they use the 60Hz for timing purposes).

So what you do is to take a 110/220V transformer with you. They cost less than half price in the US. As an example, a 110V/220V 100W transformer was $35.

236. No code Techs and CW...

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 18:46:41 UTC
From: ryanm@u.washington.edu
Message-ID: <36s7uh$khb@nntp1.u.washington.edu>
Source record: 259023

Being a no code TECH I have a few comments on some of the commentary going around. If it wern't for the no code TECH I would not be a ham since I didn't have the patience or desire to learn it in the beginning. The NCT (No-Code-Tech) gave me an easy avenue into ham radio. However, now I desire to get onto HF. My solution is not to petition the FCC to grant NCT access to HF but to learn code. I think it is necessary to have hurdles at each increase in privlages to make people move forward, and to learn more than they previously did. I plan on following the rules rather than changing them. I don't see myself using CW very much when I first get on HF, but QRP holds my facination. Since QRP is best in CW I will probably be using it in the future.

Slaming the NCT as lazey is a dumb approach. All I needed was a regional emergency to spark the desire to get the code out of the way and get my general. The Central Washington fires this year provided an opportunity to see what HF could do for us in ARES. We also found that there weren't enough generals or above to allow us to keep a 24hour HF station online at one of the firebases. This is another reason for my desire to get my general. By all means shame the ones that don't want any distinctions between licenses since this is the Communist form of Hamming :)

I would suggest showing new NCT hams what HF offers in CW, voice, data, and video rather than shame them. Shaming me has the opposite effect on me then what was desired, I get in your face and slam back. I won't go away. I became hooked on hamming when I saw what could be done with voice on FM repeaters on 2m.

I may not get it till Jan or Feb but I am working on it! --Ryan

I a previous post,
Is it any more of a `violation' for someone to pick up an ht on the rs

counter and `kerchunk' a repeater as it is for someone who does NOT have

a driver's license to start the engine of a car in a showroom?

If a tree falls in the forest...:-)

--

I say Yes! One does not need to have a _DRIVER's_ license to simply
start a car, yet keying the transmitter is what the license in this case
is for, not simply turning power on to the tranceiver. Let's make sure
we are making sensible comparisons here.

I just got my no-code tech license (but I didn't get my call sign yet) and
so I started reading up on types/models of portable radios (HTs?).
I think I want to get a 2m HT, 5 Watt, with the number pad.
Are there any suggestions about what I should get? Maybe not a 2m HT at all?
Models I'm looking at are:

Radio Shack 2m HT

Icom IC-2gxat

Yaesu FT-11R/HP

ALinco DJ-580T

Kenwood TH-22AT

Does anyone have any of the above and if so how much should I expect to pay?

The Radio Shack HT seems pretty cheap and in termns of batteries, is not "fussy"

The others seem to need "specialized" NIcad batteries which are pretty expensive. For
example, a salesman told me I need a $99 battery for the Icom to get the
full power (7 watts).

Thanks for any info.

Good for you! It was exactly with the hope that hams like yourself
would *wish* to advance that the NCT was created in the first place.

>Slaming the NCT as lazey is a dumb approach. All I needed was a regional

It's worse than that; it's petty, destructive, and reflects on the
lack of character of those who participate in it.

>I would suggest showing new NCT hams what HF offers in CW, voice, data,
>and video rather than shame them. Shaming me has the opposite effect on
>me then what was desired, I get in your face and slam back. I won't go

Two comments: First, your suggestion is excellent, and that is
exactly what the *real* amateur radio operators are doing, quietly
and behind the scenes in many cases. As for the "network prowlers"
and "phone band whiners", don't engage in *their* tactics by "slamming
back." All they want is for someone to "notice" them, so just go
your own way and seek out the good guys when you need help. There
are a lot more of them around than you realize.

>I may not get it till Jan or Feb but I am working on it! --Ryan

And when you do get on HF, drop me an e-mail and we'll schedule
a nice, leisurely CW QSO and I'll try to show you that it can be
a very pleasant way to communicate - not the only way, to be sure, but
a good way nevertheless.

>you've already performed your "market research" and know what
>you need as far as bands are concerned!
>

The FT-530 is absolutely loaded with features, but, they are extremely difficult to access and horribly counter-intuitive. (hmm, do I smell a flame-war smouldering?) Granted, if you are lucky enough to just 'understand' the interface than you've got a fine radio indeed. On the other hand, I sat down with one for more than an hour, with the manual and was nearly dumbfounded trying to figure out how to choose a frequency, a PL tone and put it into a memory.

I'm a gadget-'centric kind of guy and I adapt easily to new user interfaces. I'm experienced on all sorts of complex electronic equipment.

I've owned dozens of ht's from Icom, Kenwood and others, and the 530 had the most challenging user interface I ever encountered. Don't get me wrong, it's got a lot of things that I like such as the lighted keypad and nice form factor, but, using it was horrendous. The display is also way too small with very, very, tiny letters and symbols.

The Kenwood TH-79, on the other hand, has a great deal going for it. It's got a large, two-line true-alphanumeric dot matrix display with online help menus. No lighted keypad (sigh) but otherwise I was able to figure it out in less than 10 minutes (with the manual).

Well, I guess that I just don't grok Yaesu. More power to those who do.

P.S. I've used the FT-890 HF rig and was very pleased. I'm also falling in love with the FT-900, but, for now I'll have to wait...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 OCTOBER AND FORECAST FOR 05 OCTOBER - 07 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 03 Oct
Daily Proton Fluence >1 MeV: 8.1E+06
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.1E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Oct 06 Oct 07 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Oct: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 03 Oct
Learmonth 21 3344 4433
Fredericksburg 25 47
Planetary 32 62

Observed Kp for 03 Oct: 6766 6453
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Oct 20 Unsettled to active
06 Oct 18 Unsettled
07 Oct 12 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 5 was issued on 1 October and is
current for interval 4-6 October. Magnetic activity due to coronal
hole. Activity expected to continue for today, declining tommorrow.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Oct normal fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Oct normal fair poor
06 Oct normal fair poor
07 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
04 Oct -19 depressed 20 - 30% all day

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
05 Oct 0 About 15% below predicted monthly values
06 Oct 10 About 10% below predicted monthly values
07 Oct 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 3 was issued on 2 October and
is current for interval 4-6 October. Ionospheric depression in
progress. Continued depressions expected for today. Nothern Australia
communications should continue to use October Tindex of 20.

251. SAGE Radar

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-04 23:38:15 UTC
From: news@chevron.com
Message-ID: <199410042340.AA76591@portal.chevron.com>
Source record: 258899

I was asked by someone today if I knew anything about SAGE (Semi automatic ground enviroment) radar. I don't know anything about it but I told him that I knew where I could find people that might.

I am sure that he is interested in where, why, and how it worked.

Anyone???

: is a difference in the sideband used for receiving 144-146 and 146-148. Why
: is this done, and is it critical? Thanks.

Since this is an FM rig the sideband referance does not make any sense.
Could you be refering to the TX Offset used for repeater operation ?

: Does anyone know what the difference between the 144-146 version and
: the 146-148 version is? Other than the difference in the sideband used?
: Thanks.

The only differances I know of are the 144-146/ 146-148 versions of the
radios. 142-146 are European, 146-148 are US rigs.

: frequencies w/ large Parabolics either).
: I'm specifically looking for "how far" on "how little power" under
: *relatively ideal conditions* for 1 milliwatt and 1 watt.

Well, 1 watt at microwave frequencies aren't going to get you as
far as at HF, no matter how large your antenna. :-)

I've never run more than 4 watts in the 1.5 years that I've had
my licence, and usually stay down at about 1 watt unless conditions
are *REALLY* bad. :-) My contacts average out to about 400+ miles
on the 40M band, although my longest-range contact was approximately
2800 miles with 2 watts. It's not unusual for dedicated QRP
enthusiasts to get several thousand miles per watt.

So, in short, you can work around the world if you have patience,
a good antenna, and someone who is willing to dig your peanut-whistle
signal out of the noise.

I want to ask you guys for your opinion concerning repeator courtesy. I
just got my tech ticket 2 weeks ago. When I'm monitoring, I'll say
"KE4QPU monitoring" about every 15-30 min. Of course, I am careful not to
interfere with anybody's communications, and to keep in mind that I am
actually "borrowing" somebody's equipment (the repeator). I hear very few
other hams in this area saying that they are monitoring. Not wanting to
sound like a "Lid", I asked several local hams if this was a nuisance and
they all said it was OK, but they just didn't bother doing it. I have
made some very interesting contacts this way, including a guy passing
through on Amtrak with his HH HTX-202 (W6WWP?)!
What you say?...
Chuck...KE4QPU

> artificial grounds that are advertised in catalogs (MFJs, for instance).

Try a quarter wave of wire for each of your favourite bands trailed around the walls (or tacked to the skirting boards). Examples, 33 feet for 40m, 16'6" for 20 metres, 8'3" for 10 metres etc... Connect them all together at one end, connect that end to the chassis of the rig, and Bob's yer uncle!

Don't worry too much about keeping the wires straight - around the walls, even around doorframes shouldn't matter too much.

: DC Power connector at several stores and at connector vendors at recent
: Hamfests. I have never seen the correct connector. It's a two pole with
: one blade at a 90 degree angle to the other. Anyone know where I could get

Several years ago I purchased a new Kenwood TS-440AT HF rig and decided I would like to use it in the mobile as well as here in the house. I thought the best way to do that was to have two power cords; one for the house and one wired into the truck. Since Kenwood wanted a lot of cash for a Molex plug, two in-line fuse holders and a couple of feet of wire I decided that I could make the second power cord myself for just a couple of dollars.

Well, I looked all over and couldn't find the same connector used to plug into the Kenwood radio. I solved the problem by buying a couple of more common heavy duty Molex connectors and adding them to the factory supplied power cord between the in-line fuse holders and the power source. There is now a pigtail in the truck and a pigtail on the power supply that the factory power cord can plug into. Moving the rig between the house and the truck is accomplished quickly.

The same trick might be the answer to overcoming your problem of matching your hard to find connector.

By the way, the home power supply keeps a charge on some deep cycle batteries here in the shack so when the power goes off the station stays on the air. Here in "Earthquake Country" you can't be too careful! ;-}

263. CQ magazine paper quality

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-05 09:26:20 UTC
From: matsn@tcs02.nada.kth.se
Message-ID: <36trfs$9u6@news.kth.se>
Source record: 258911

Yesterday it happened again. I received my copy of the
latest CQ and as usual it was in three (3) pieces:
The front cover, the internal pages and the back cover.
In other words, the cover has come off the rest of the
magazine and is then torn in two pieces across the "back".

By usual above, I estimate that this happens two times
out of three and in the rest of the cases, the magazine
will only withstand one or two readings and then shows
the same symptom. (No I'm not careless when I turn the pages.)

My questionn is: Are there any other CQ-subscribers/readers
that share my experience? If this is a common problem, due
to the paper/binding quality perhaps a note to CQ would be in
place. Of course I can not rule out the possibility that the
paper is seriously damaged during shipping (I get my copy via
surface mail), but the plastic wrap is always intact. Comments
from readers in different parts of the world and using
air/surface mail would be interesting.

I have issues back into the 60's and they are still in good
shape. But they seem to be printed on much heavier paper. Their
smaller size may also be to their advantage.

Message-ID: <1994Oct05.071434.21307@wb3ffv.wb3ffv.ampr.org>
Source record: 258745

I am far, far, far from being the ultimate QRP achiever, and many people have done better than mine. The recent posting asked how far one could go with 1 mW and 1 W. With 50 mW and under, during the height of the sunspot cycle I worked regularly into Europe on 20, 15 and 10M from the east coast of the US, using a 40M delta loop. For many years I have been checking into the Saturday morning QRP net on 7040 KHz with 10 mW down to 1 mW with the net control station 350 miles away. Randy Rand, AA2U, has over 100 countries with 100 mW and under. The short answer to your question is that, with proper conditions, time of day, etc, one watt can (and most absolutely DOES) work anywhere in the world, and with a bit of effort and luck, much lower powers do the same. (If interested in QRP building and operating, you might want to sign up for the QRP mailing list; send e-mail to listserv@netcom.com, subject line unimportant, and for text say, without the quotes, "subscribe qrp-l".) 73 DE WA8MCQ

Hi Michael. My first DX contact was made from here in Raleigh NC
to the Canary Islands on February 15, 1993. Thats 3600
miles great circle route. Output power was 700 mw to a dipole
up 18 feet. Freq was 14.031 mhz and time was about 0240z.
10 cm Solar flux index was about 88 and the K index was 1. He
gave me a very weak signal report but did not require any
repeats.

Never got his card though (sigh). He was EA8QJ.

Hope this helps, 73.

All amateur SSB transmissions above 10 MHz use USB (upper sideband) by
convention.

However, the Icom IC-22A is an FM-only transceiver, so SSB reception ain't
possible anyway.

I always announce my call when I turn on the rig, the repeater is quiet, and I'm willing to chat with anyone who responds. I don't say "monitoring", that should be self-evident. I drum up a lot of conversations that way. It's considered standard procedure around our repeater group.

>So, what to do? What options do I actually have? What are others
>on the 2nd floor doing? Any suggestions would be appreciated.

There are three reasons for a station ground. One is electrical
safety. That's adequately supplied by the third wire connection
in your electrical service. Two is lightning protective grounding.
That's a complex subject if you want to be able to keep your
equipment connected and operating during storms. It can be done
from a second floor shack, however. The alternative is to always
disconnect your equipment from antennas, power, and telco when not
operating, and never operate in storms. The third reason is to
supply an RF counterpoise for an unbalanced antenna. That's difficult
from the second floor. A better alternative is to only use balanced
antennas, or to use tuned wire counterpoises.

As operation from cars and planes demonstrate, you don't need a
connection to Earth in order to radiate an effective signal.

>signal out of the noise.

From "200 Meters and Down" by Clinton B. DeSoto, published in 1936,
page 112:

"But this paled before the performance of Loren G. Windom, 8GZ-8ZG,
of Columbus, Ohio, who on December 30th (1925) communicated with (Henry A.)
Kauper, a5BG (of Dulwich, Adelaide, South Australia) using an input of only
0.567 watts to a UV-199 receiving tube! With the distance given as 10,100
miles, this figured out to be 17,820 miles per watt. On January 3, 1926,
contact was established with Major J. G. Swart, oA6N, in Capetown, South
Africa, using 0.54 watts input. On February 28th, 8GZ worked George H.
Shrimpton, z2XA, in Wellington, New Zealand, a distance of 8500 miles,
with 0.493 watts input, giving 17,250 miles per watt. A filament poten-
tial of 4 volts was applied to the UV-199 tube during these tests, and
a plate voltage from 70 to 75. So far as is known, these completely
incredible records - in which much less power was used than is consumed
in the ordinary flashlight bulb - still stand unbroken."

Two comments: First, I didn't check the *frequency* used for these
tests, but it was most likely 20 meters (possibly 40 at night). Of
course, there was no QRM in those days and very little electrical
interference, so receiving conditions must have been stupendous
compared with today. Second, recall that *wire* antennas were the
norm in those days - no big yagis on towers with rotators!

BTW, does the name "Windom" ring a bell? Was 8GZ "the" Windom, or
is that just a coincidence?

>I think I want to get a 2m HT, 5 Watt, with the number pad.
>Are there any suggestions about what I should get?
>

Paul,

My sister-in-law received her no-code tech license this past summer,
and she bought the Kenwood TH-22AT, as did I. We're both very happy with
it. It run 5 watts with a 12 volt supply, so it makes a good mobile rig
if you use a good mobile antenna. It's also quite compact, so you can
walk around with it without looking like some sort of nerd. (The older
HT's were about the size of a large brick.)

When we went shopping for an HT we collected specification sheets on
about 10 different HTs produced by recognized manufactures. (Kenwood,
Alnico, Yeaseu, etc.) I was surprised to find that numbers we almost the
same for all of them, e.g., same sensitivity, same selectivity, same
functionality, same number of memory, etc. So from a technical
point-of-view, it didn't matter which HT we picked. So we just picked the
one that we were most comfortable using from an ergonometric
point-of-view.

The comments above apply only to the HT's that have a broadband
receiver in them, and allow you to receive police, fire, and aircraft
communication. If you don't want any of that, then I recommend you
consider the Radio Shack HTX-202 2 meter rig. It's a little bigger than
most HT's, but it runs 7 watts on a 12 volt supply, and receives only on
the amateur 2 meter band. Receiving only in the 144-148 mHz band means
that the receiver is more selective, so it does not suffer as much from
`intermod' interference from other services, something that does happen on
my little Kenwood.

275. "How far" does 1 milliwatt (and 1 watt) go?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-05 13:49:54 UTC
From: ham@wam.umd.edu
Message-ID: <36uau2$7j5@cville-srv.wam.umd.edu>
Source record: 258923

More correct is to wonder how far an E-M wave of a certain power
can travel.

Say you're transmitting 1 watt to a real "isotropic" radiator.
Your "power flux" is then 1 watt/(4*pi*r^2), or the power radiated
divided by the surface area of the sphere at some given distance.

By determining that some solid angle containing power will direct
to your desired location, you can figger out just how much power is
going into the ionoshphere along your desired path. Chances are
PRETTY GOOD that not all of that 1 watt is going along the desired
path...

Now use a beam. Integrate over the beamwidth that's going in the
direction of the skip, and you'll find that considerably more power
than with the isotropic radiator is going in the desired direction.

So if you've got a 10 dbi antenna, you need 1/10 the power to
achieve the same results if it's pointed in the right direction.

I've been heard in OK/OM on 3 watts to a dipole with a 6 element
monobander on the other end...

And don't forget about "effective gain" of CW over phone, either.
SSB carries more information, but must spread the power out over
a wide spectrum in order to do so. CW has a very narrow BW...

: I want to ask you guys for your opinion concerning repeator courtesy. I
: just got my tech ticket 2 weeks ago. When I'm monitoring, I'll say
: "KE4QPU monitoring" about every 15-30 min.
: What you say?...
: Chuck...KE4QPU

I suppose its a matter of tradition that people don't say what
they really mean, but have you tried calling "CQ" if you really mean to
put out a general call to all amateurs?

As a general rule, I won't answer people who say they are monitoring
unless I have a need to talk to them. I WILL answer a CQ on the repeater
since it means somebody wants to talk to me (or anyone else).

The downside of calling CQ (and the call should be short, like "CQ
from WA2OOD") is that the first time I heard it, it was followed by
chatter from others infering that the CQ'er was a lid until someone else
commented that calling CQ actually made sense and for others to back off.

I only say that I am monitoring if I am expecting a call or waiting
for a particular person to show up on the frequency

Any other opinions on this?

ALL,
this is my original message. Obviously the topic is hot. Please read it and discuss it as you like.

Peter, KC1QF
pve@dg13.cec.be

==========

-> This is my original message.

==========

I read with interest the messages to and fro concerning Scarborough reef. I am amazed that people are going to sit down and talk about this forever (it seems).

The DXCC doesnt have much of a policy. Lets face it, alot of rules are arbitrary. I mean, the 225 mile rule? the 75mile rule? They dont apply everywhere, do they? Why 75 or 225, Why not 10, or 1000. Whats going to happen next?

When there is enough pressure to have new countries, will they lower it to 50 mile separation through intervening states or 10 miles or what? Perhaps 225 miles is too much; maybe they should do it 100 miles. Then we will instantly have another 100 'countries' and so on. Even as the rules stand, why is SV5 a new DXCC, when an Island off Ireland isnt. SV5 sure as hell isnt 225 miles away, is it? And so on.

If the ARRL wants the DXCCprogram to be respected, then I suggest they make a real change and stick to it. Make a DXCC program based on real countries plus remote territories. Thats it. No miles, no separation, nothing. Let the politcal world decide, not an advisory panel who sets arbitrary limits and separations. This way, you will never have to change it. Never. The only changes will happen because of global changes. And these arent decided by committee.

Lets see what kind of comments I get on this one.....

Peter, KC1QF

==========

Peter,

I tend to agree, mostly. This comes from someone who is currently sitting at around 325 current "countries" (I need cards that count from Libya, Tromelin, and Andaman and Nicobar). To my way of thinking, only

real countries should count as countries. Alaska and Hawaii are not countries. Peter I is a rock off the coast of Antarctica, not a country. Desecheo is a wildlife preserve, not a country. The American Virgin Islands are not a country. Neither is Puerto Rico (but that's another story).

I haven't really thought about remote territories. However, I suspect this is where we got started with what constitutes a country in the first place! Could be wrong though -- it happened long before my time. My inclination is to go just with real countries and not open the door for starting this madness all over again.

==========

Peter -
I have chased DX for more than 35 years...have 5BDXCC and my TOP OF THE HONOR ROLL plaque...and I can't make any sense out of an awful lot of the things we call countries. I have long thought that DXCC would still attract plenty of hams (maybe even more) if the list really made sense. But I wouldn't bet a rejected QSL card that we will ever see any really sensible changes toward a meaningful and consistent understanding of the DXCC criteria.
Thanks for your posting and your thoughts. -Dave- K9FN

==========

Peter,

To tell you the truth, I'm not sure how many were "real" QSOs. As you know, most DX QSOs are signal report, QTH, name, wx, rig, 73. I worked a lot of my countries with that format. Without thinking, I would suspect that maybe half of my countries were worked in DXpedition format. 59, next. 59, next. I tend to make that QSO and not think much about it afterwards. Sometimes, I'll get out an atlas and find out where exactly that place was. Sometimes not.

Hmmm... seems I've gotten awfully cavalier about this in my old age! I wonder if that is a common phenomenon?

73,
Bob K2PH

==========

I agree. Perhaps you also want to send your answer to the DX circuit so others can see it. And by the way congrats. However, I wonder the following:

from all the QSOs you have had to make up 325, how many were real QSOs and how many were 59s. Did you learn more about the place after the QSO or not?
Peter, KC1QF
pve@dg13.cec.be

==========

I think you nailed it, Peter.

We are supposed to work them. WE don't tell THEM if they are a country or not.

I've been absent from hamming and DXing for about three years. I returned to a dicsussion of the status of a semi-submerged reef?

I think when you have worked all these real countries on all bands, or any way you wish, you should enjoy this accomplishment, put your award up on the wall, then take your lady out for dinner or play with your grandchild. You did it! Now, do something else.

73 ...
Bob K5SIV 153-2401@MCIMAIL.COM

==========

My inclination is to go just with real countries and not open the door for starting this madness all over again.
73, Bob K2PH

==========

There are indeed awards based on "nations", WorldRadio or something similar runs one. There is also a "Worked all UN Countries" award, this is listed in the K1BV awards directory. I got something like Certificate #5, which tells you not that it is hard to do, just that it is not a popular award. But it's there if you want it.

Actually, the UN list of "countries" has almost as many quirks and inconsistencies as the DXCC list.

I type as one who is not on the DXXCC Horror Roll. I don't even have the Hoogovens-Estel Steel Award for working hams who perform shift work at the blast furnace in Ijmuiden (Netherlands) - PAs work 10 members working on 4 different shifts. As Dave Barry would say, I am not making this up (p. 119 of my K1BV directory).

I make mine by sawing a female N-to- female N connector in half and soldering the tip onto the end of coax center conductor. Then I get a 1/2" NPT-to-1/2" copper pipe adaptor and solder the N connector barrel into the 1/2" copper pipe end. The 1/2" NPT end is then screwed down onto the 3/4" hardline aluminum jacket. Penetrox is applied first. After its assembled I use liquid electrical tape which is applied around the base of the adaptor. Yes, I know but its been working good for over two years.

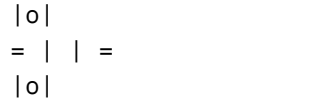
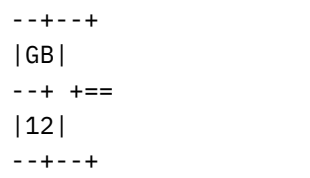
I purchased a couple "black boxes" at a recent hamfest and am trying to
figure out what they are. They are built using surface mount devices
and I don't recognize the part numbers. Can anyone help me identify the
following components?

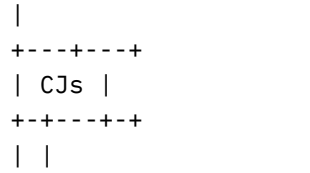
NEC part 8002 - appears to be 3 terminal white ceramic device as follows:



??? part GB 12 - appears to be a 4 terminal black plastic case:

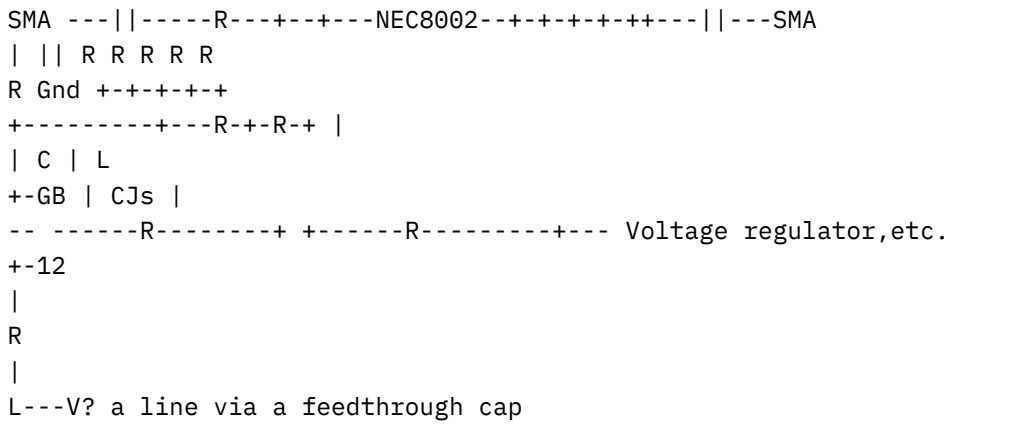


??? part CJs81?? - appears to be a tiny 3 terminal black plastic case
and I'm not certain about the 81, it's written at a
90 degree angle to the CJs and is microscopic in size:



Also, how does one tell chip resistors from chip capacitors? I'm new to
surface mount technology.

My guess is the device is some sort of uhf/microwave amplifier given that
it has an SMA connector on each end and what appear to be two supply
voltages, Vcc and bias? From the SMAs there are coupling capacitors
leading to the NEC device with an apparent feedback loop. So it looks a little
like (if I got the resistors and caps right):



Why all the resistors in parallel? Current handling?

Any guesses or information would be greatly appreciated before I try
and fire these suckers up and sweep them.

>are a lot more of them around than you realize.

Paul,

Good point here, and i agree that much of the no-code and upgrade
support is done in a very low-key way. I went from tech to extra in
a year, and brought a few other hams along as well!. I cringe at
each utterance of No-Brain-Tech and the like. The no-code option
got me in the door, what more was intended? If there are too many
techs on repeaters (??) too bad. With 2m as the de-facto entry-level
band, it is inevitable.

And Ryan, welcome aboard

What's wrong with trying to change the rules? Even if you feel that there needs to be hurdles (which can be debated also), the fact that those hurdles currently consist of Morse code tests is no reason why it has to stay that way. It's not only the operators that need to move forward, but the Amateur Radio Service as a whole. Part of that progress may involve removing the Morse code testing requirements someday. Why is it so wrong to want to change?

------------------ Response ------------------
Peter:
I hate to rock the boat, but I don't totally agree with your
accessment of the DXCC award program.

The DXCC countries list as we know it today has evolved over a
number of years and believe it or not, there are valid reasons
why each DXCC country exists. These countries exist, based on the
DXCC criteria that has also evolved over a number of years.

I been a DXer for a long time and I have always been interested
in why countries are on the list. I have studied the DXCC program
and I think I understand why all or most of these countries are
on the list. I understand why, but I admit that I don't always
agree. I have that right.

In your discussion you imply that the rules (criteria) are
arbitrary and that changing the mileage rules would create more
countries (do you think this is bad?). The basic DXCC criteria
has been fairly contstant for a long time, especially with respect
to the mileage rules. In my opinion, the mileage rules are there
for a purpose--to prevent too many countries from being created.
For example: change the "75 mile rule" to no definite mileage, but
specify only separation by foreign land and I will present you with
a handful of new countries real quick.

Contrary to your comment, the DXCC award program is the most popular
and respected DX award in the world. No other countries award even
comes close.

Lastly, you propose an award based on real countries plus remote
territories. Please tell me what constitures a real country or
for that matter, a remote territory? Surprise, you will need rules
or criteria to help determine what whether an entity qualifies,
hence the DXCC criteria....

Now, let me propose a modified DXCC award for the purists--let's
call it the partial DXCC award or pDXCC for short. To qualify one
needs only work real countries or countries of your choice.

I like the DXCC program the way it is, but I retain the right

I think the point that is being made is, don't get bogged down by what the
requirements currently are. To get on HF requires passing some sort of CW
receiving test. If you truly want to utilize HF, you won't let CW stop you.
CW may be outdated as a requirement, but the best way to make change is from
the "inside". If you wait for the requirements to change, then you are
wasting time that could be invested in an exceptionally fun hobby.

I will admit that I wanted HF priviledges and I hated (so I thought) learning
the code. It was 5 1/2 months after receiving my license that I made my first
CW QSO. Now I really enjoy using CW. Its not the most efficient form of
radio communication, but it is fun.

Be very careful. In the UK the system uses a star distribution of 440 volts
from phase to phase and the 240 volts dometic supply is the phase to neutral
(i.e. 440 / sqrt(3)).

The only 220/110 volt split phase system I have come across as described
above is in the USA where the double voltage is available for heavy
appliances like air conditioners and even ham-radio linears!

I fully agree. There is a distinct class that folks put themselves in
when they get on and say something like:
(callsign) mon-i-tor-ing
pronouncing every syllable.

Usage varies by area, but the more experienced operators in this area
seem to have dumped 'monitoring', and will now typically just say their
call.

If you want to call someone, calling CQ (a SHORT one), seems to be
just the ticket in increasing areas.

Greetings all,

Recently I decided to blow the dust off the Uniden 2510 10m rig. I remembered reading about a modification to boost the output power close to 100 watts. I found a copy of the article in the local library, and I'm ready to pursue getting the necessary components. Before I started however, I thought I would ask the collective wisdom of the net, if anybody has already tried this mod and has experience with it. The mod consists of adding a new final and driver transister, along with adjusting bias, and tweaking AM/FM and CW carrier levels.

So, anybody have thoughts they want to share about this mod? Anybody got a service manual they want to copy/sell/loan?

Thanks in advance.

I am the manager of a boys hockey in the Montreal region.
They are 12 and 13 years old and classified as PeeWee level B.
I would like to arrange some games for them with same level
teams in the northern NY and Vermont regions. The games
could be played in the US, in Montreal, or both. If any
hams in the region could get me the names and phone numbers
of some coaches I could contact, I would appreciate it. If
you don't have any contacts for me, I would appreciate it if
you would spread the word about my request over the radios.
All replies should be either by email at:
HIRSCHJ@vax2.concordia.ca
or voice phone: (514) 620-7171.
Thanks for your cooperation.

In our license study group our instructor told us that CQ usually isn't used on VHF -- that "listening" or "monitoring" was the convention. Even that varies by depending on local custom. It's my understanding that the abbreviations (CQ, QSY, etc.) migrated from CW use. For DX, where signals and/or audio may be weak, they may serve a purpose to get a message thru quickly. On VHF that's rarely the case. In my mind "listening" or "monitoring" means that your willing to talk if anyone wants to, supply information, or respond to an emergency, but you are not actively looking for contacts. On a related note, there's a ham on one of the local repeaters who responds "QSL, QSL..." **every time** someone says anything to him. I just want to scream "Speak English!" everytime I hear it. I think he's a relatively new ham (like myself), but in this case a little knowledge is a dangerous thing ;-).

Plain English works for me.
My $.02 worth.

Personally, I never kerchunk a repeater without immediately identifying. If I'm just checking the rig, say, after connecting a mobile antenna instead of my duck, then I just ID with the call sign before shutting down. I usually wait for 5-10 seconds in case someone has been looking for help and comes back to me. If I'm planning to continue listening for some time, I add "monitoring" after the call sign, and sometimes repeat this announcement every ten minutes or so. But my repeater is not heavily used, so I have no reason to think there are large numbers of always-listening lurkers who might be annoyed.

Yes, you can make some great contacts this way. I wish more people would do it.

You might want to look for a rig that offers a battery case, physically compatible with the NiCd pack but holding a suitable number of standard alkaline cells instead. This is much cheaper than a spare NiCd, and remains charged on the shelf much longer. This way you can get maximum life from your NiCd by using its full charge cycle every time, while carrying the alkalines as backups and being able to operate in an emergency even if you can't recharge the NiCd unit. I know that such units are available for some lines made by both Icom and Standard.

: NEC part 8002 - appears to be 3 terminal white ceramic device as follows:
: |o|
: = | | =
: |o|

This is a +28 dBm medium power C band GaAs FET.

To operate this, you will need a negative bias supply and a
drain supply that is either current limited or sequenced to
the negative supply. Shorting out the gate supply should
disable the drain supply--otherwise the FET may be fried.

I'd bias the device with 0.3 amps at 9 volts. The gate ought to
handle -10 volts. If I had the test equipment, I'd sweep it between
3 and 10 GHz.

Fred Lloyd says:

: The FT-530 is absolutely loaded with features, but, they are extremely
: difficult to access and horribly counter-intuitive...

Like the other man says, try them out. Not to minimize Fred's comments, but I find the 530 relatively straightforward to use within the baseline of all newer HT's not being very intuitive. I don't have any trouble remembering how to do all of the *useful* functions. *Any* interface takes time to get used to and "grok". Usually, there are some unifying, cohesive concepts down in there somewhere. Maybe Kenwood's got the right idea with the TH79 (much different than the TH78, which I feel is less "intuitive" and ergonomic than the 530, despite its more sexy look), with its on-line help. However, I still can't figure out how they could've left out the memory scan channel lockout function.

Possible '79 advantages (I haven't used or even seen one for real): smaller, on-line help, more power efficient (new MOSFET power amplifier section), dot-matrix display.

Possible '530 advantages: battery voltage (I think it's very useful), runs cooler at higher power (simply because it's bigger), "quicker" (although less friendly) interface, great display and keypad lighting.

However, the *really* important feature, and one you won't see mentioned in the advertising blurbs, is spurious signal/intermod rejection. This "feature" can more than make up for the lack of all sorts of bells and whistles if you're in an urban area or even a large town. All of the features in the world are useless if you can't hear who you're trying to talk to! Try to get a feel for this by scanning around in the band. Others have said that Standard dual-band HTs are clearly superior to ICOM-Yaesu-Kenwood (IYAK?) in this regard; I don't have any personal experience. I do know that this capability will figure very highly in my next HT purchase.

Good luck!

Ok, I'm new, so sue me. I seem to remember in my study guide for the
Tech test that CQ was reserved for HF bands, and that the correct way to
stimulate conversation on V/UHF was to say "KE6LZM, listening" on an open
channel. In my local area (San Diego) the convention seems to be
"monitoring" rather than listening, but I may be wrong. (I listened on
my scanner for several months before I got my ticket.) Either of these
words convey to me that the person announcing is stating their presence,
and willingness to participate in conversation (else why say anything at
all?). Someone who is expecting a message from, or are trying to get
ahold of another ham announce "otherperson'scall theircall" and then wait.

I realize that local conventions differ, but being new to the hobby, I
want to get it right. These are my understandings, please correct me if
I am wrong.

Doug

I've never really understood why anyone would mistake "W4XYZ monitoring"
for "CQ de W4XYZ" It seems analagous to going to a party and standing
in a corner instead of circulating and actively introducing yourself.

"monitoring" sounds so uncommitted. Everytime I hear it I silently
respond with ' so what? Do you want a medal or something?'

I suggest that CQ will still work to obtain a QSO and may even be the
topic of the conversation at first as people try to 'straighten you out.'
Just don't be foolish and do a 3 x 3 style CQ as you might on CW :-)))
(Once will suffice. i.e "CQ anybody want to talk? This is NW0U")

I too am a fan of plain language when it makes sense.

I had a similar problem, and fixed it by putting a small capacitor (I don't remember the exact value, but I don't think its really critical) across the leads of the control switch at the opener. There are three leads - my guess is one is power (for the remote control reciever which also closes the same leads to open and close the door), "signal" and ground. Capacitor goes accross signal and ground. When measuring the wire from the switch at the garage door to the opener, I guessed is was close to 1/4 of 20 meters, which is the band that I had a problem on. Capacitor on - - no problem. Now I need to fix my hi-fi amplified subwoofer. Everytime I transmit on 40 or 80, a tremendous (400 watt) audio BOOM. Really shakes up the cats....hi

Good luck 73 Mark KM6FM

I'll take a proper rhombic over a yagi any day. It's a wire antenna with an attitude! On 20m, they aren't even all that big. Terminated rhombics are lovely broadbanded creatures, unlike yagis.

I seem to recall that the rhombic has a long history; that's why the ARRL logo is shaped the way it is. So a QRP'er using them in the mid-20's wouldn't surprise me.

That's too bad. Consider the newcomer's plight. On the one hand, local conventions suggest certain practices. Since they're the new kid on the block, they conform. Then the non-conformest silently ridicules them for their conformity. Nobody wins.

: I suggest that CQ will still work to obtain a QSO and may even be the
: topic of the conversation at first as people try to 'straighten you out.'

OK fine, but that's not the kind of conversation the newcomer really wants. Most folks just starting out are looking for acceptance and aren't likely to be willing to provoke this kind of discussion. You and I might have that discussion on the repeater and both get a kick out of it. But the poor soul who just got the ticket 3 days ago isn't too likely to enjoy it.

: Just don't be foolish and do a 3 x 3 style CQ as you might on CW :-)))
: (Once will suffice. i.e "CQ anybody want to talk? This is NW0U")

OK, then how about just "KG0MR listening -- anybody want to talk?" Then you save yourself from the inevitable lecture on how "we don't use CQ on FM repeaters dummy". 'Course you still brand yourself as "different".

Better yet, how about when you, as an old hand, hear a new call transmit a "monitoring" on the repeater, rather than sitting back and thinking derogatory thoughts you let it lie and just engage the newcomer in good, jargon-free conversation.

: I too am a fan of plain language when it makes sense.

As am I. Which is why when asked things like "what's your handle" I'll simply reply "my name is Scott". When someone says "73", I'll usually reply with something like "Talk to you later... " or some similar regular old English sentence. And when someone says "QSL, QSL", well... I keep a barf bag in the car and try not to hit the PTT while using it. And I go on with the conversation. No big deal, just my contribution towards the reduction of jargon. And a whole lot better and effective than making a big deal out of the whole thing or making someone feel bad.

: I only say that I am monitoring if I am expecting a call or waiting
: for a particular person to show up on the frequency

: Any other opinions on this?

It's a system that makes sense. Too much sense, I suppose. Ideally,
things would go like this:

"Callsign" - I'm kerchunking legally

"Callsign testing" - Extended kerchunk. If a signal report is welcome,
ask for it ("... Could I get a signal
report, please?")

"Callsign listening" - I'm available if you need to get in touch with
me, but don't feel like a casual chat

"CQ from Callsign" - I'm up for a conversation with anyone who answers

But around here that last gets you more arguments than conversations.

(BTW, why is it that Q signals are "bad" on phone, but CQ is okay?
Consistency would suggest "Calling any station, from Callsign,
C-A-L-L-S-I-G-N, go ahead" or something.

Some of these procedures seem much too poorly thought out to pounce on
a violation.)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 OCTOBER AND FORECAST FOR 06 OCTOBER - 08 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 04 Oct
Daily Proton Fluence >1 MeV: 1.3E+07
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 9.8E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Oct 07 Oct 08 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Oct: 81/22

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 04 Oct
Learmonth 26 4335 5433
Fredericksburg 25 23
Planetary 31 26

Observed Kp for 04 Oct: 5444 4334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Oct 18 Unsettled to active
07 Oct 16 Unsettled
08 Oct 10 Unsettled
COMMENT: IPS Geomagnetic Warning 5 was issued on 1 October and is
current for interval 4-6 October. Magnetic activity is expected to
decline today.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Oct fair-normal fair poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Oct normal fair poor
07 Oct normal fair poor
08 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
05 Oct -18 about 25% below predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 Oct 0 Depressed 20% early in UT day then slowly recovering
07 Oct 15 Near predicted monthly values
08 Oct 20 Near predicted monthly values
COMMENT: IPS HF Communications Warning 3 was issued on 2 October and
is current for interval 4-6 October. Ionospheric depression in
progress. Continued depression expected for first half of today,
for southern half of Australia. Depressions of 20% were observed at
Townsville yesterday for interval 01-07UT. Townsville MUF values are
near predicted monthly values this morning.

: > providing that I passed the one before it. Not exceedingly difficult, you
: > just have to be prepared to sit there a bit longer than everyone else.
: >

: This is not any special deal. For the fixed fee of around $5.00 per session
: you are absolutely entitled during any one session to take the theory papers
: in continuous ascending order, so long as you pass each the previous one and
: also, if necessary, take the code tests in decending order until you pass
: one of those.

You know, I'm sure this is no big deal, but its the first time I ever saw
it happen live and in person, so I still can't get over it :)

Last Thursday I was at a VE session, trying to nail the Extra. There was
me and another guy taking the 20 code test. They played the tape and I
was sitting there sweating bullets missing letters left and right. Very
high stress situation for me :) When it was over, I had this mass of
barely intelligible letters on the paper. I passed, hitting 8 of 10 on
the multiple choice code test. The OTHER guy, just sat there cool as a
cuke writing script like he was taking dictation. His copy was perfect.
100%. No mistakes. 500 characters. We were stunned because the guy has NO
LICENSE!

So he takes element 2 and aces it. Aces 3A and aces 3B. Says he studied
as far as General and that was it. They gave him the Advanced (4A) just
for kicks. He hit 44 of 50 on the Advanced. They wanted to give him the
Extra written, but he wouldn't take it! He just steadfastly refused no
matter how hard the VEs worked him over. What a disappointment!

319. 2nd Floor Ground or No Ground?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-06 03:26:47 UTC
From: dale.piedfort@pcappbbs.com
Message-ID: <9410070400082581@pcappbbs.com>
Source record: 258970

Never ground to the electrical system of your house, will cause you more grief than its worth. A good ground should be as short as possible to an 8 foot ground rod, in your case that will be next to impossible. MFJ does make an artificial ground that will give you an adequate ground for your station. Keep the leads away from prying hands or you can get a good burn from them. This is one MFJ product that will work for you. For more details on a good ground pick up a copy of the Amateur Handbook and go from there.

> 'Course, it DID take a hell of antenna back here. I trust you've
> all seen pictures of Aracebo!

You don't even need Arecebo. In the book FIRST CONTACT, author/hams
Cullers and Alschuler describe an amateur SETI station composed of a
3-4 meter dish, an ICOM 7000, a GaAs FET amplifier providing a system
noise temperature of about 100k. With a digitizer board and a computer
software capable of Fourier Transform spectrum analysis you would have
a competent system.

The authors recommended using Voyager II (then at about 30 A.U. from
Earth) broadcasting at 20 watts on 8 GHz as a test target! I wonder if
anyone actually did this?

Now when someone actually picks up ETI, that will probably set a few
interesting records. ;@} And who said microwave wasn't good for DX? ;@}

>73... Mark AA7TA

Believe it or not, I used matching 2m base-loaded Larsen 5/8wave antennas
on both a 2m Standard and a 6m Motorola Motrac for years. I tried it
after I read an article in a 1980 issue of Larsen's "Antenna News" - it's
a periodic flyer to their commercial 2-way shop customers. The article
discussed base loaded antenna design, and mentioned that the NMO-150
should work OK on 47-52mhz as long as the whip wasn't trimmed at all.
I tried it and the SWR was Ok and it had decent performance. I used
both 52.525 simplex and the local repeater. The bext DX was Phoenix,
Houston and Boise - all on the same day... And no QSL cards from anybody...
PS - this was 5 years worth of mobile operation - in 3 different cars.

Later on, I used a cut-down Radio Shlock CB ground plane on a 6m
Motorola base. The model that RS sold in the late 80s had the elements
in two pieces, and they screwed together. On eof the members of the
local ham club discovered that if you left off the end half then the
thing tuned right up on 6m. Unfortunately they switched manufacturers.

But look at the CB base antennas from various manufaturers. Pick one
that has a matching network that can be removed or rebuilt. Reverse
engineer the design using the ARRL antenna book ground plane design.
Then get out the hacksaw.

**********SOME REFERENCES ABOVE ARE OUT OF DATE**********

I would like to draw your attention to the fact that the Department,
referred to above, has changed its name. This occurred during a
ministerial reshuffle at the end of last year! Officially the department
split was completed as of the beginning of this Financial year. This Dept
now have nothing to do with driving ships, flying planes, trucking, roads,
trains or anything Transport oriented. The Communications portfolio has
been split from Transport and merged into the Arts group. The
official name is now The Department of Communications and the Arts
or DoCatA for short. You might like to alter your FAQ text for next month.

Go for it, Ryan! Lots of us forget that amateur radio covers a tremendous range of activity and interest, and it's hard to even sample all of it. Anybody who wants to put down a no-code Technician should consider whether he's tried EME or ATV or microwave communication himself. There are people who are exemplary hams and excellent operators, who hold Tech or no-code Tech tickets. Many of the people who enter ham radio with these tickets upgrade, but there's certainly nothing wrong with those who don't, if VHF/UHF operation meets their needs. We have a club that has been around for 20 years, but that right now is built on Novices, Techs and no-code Techs, or people who have recently upgraded from those licenses, with just a few of us OFs around. As far as I am concerned, the no-code Tech ticket has revitalized amateur radio.

So there!

From: brian.parker@pcappbbs.com (Brian Parker) wrote on
Date: Wed, 28 Sep 1994 21:19:00 GMT:

The other day I had a need for a Chimney mount so I went over to my
local Radio Shack Store. When I made my selection and paying for
the item I noticed there was the Tandy so called version of the
2 meter HT on the counter. I noticed the HT was on and it was
turned to a local repeater. I picked up the unit the keyed the
unit, (my apologies to the local repeater owner for Kerr-chunking
his repeater). I was SHOCKED when I heard the courtesy tone
from the repeater.
[stuff deleted]
.....
In our local RS stores, the HTs and scanners are all on a shelf behind the
counter where patrons are not supposed to be. In the couple of cases where
I've asked to examine the HT, I was asked not to turn it on since "the
batteries [were] not charged..." Of course, I complied...it's a friendly way
to keep the riff-raff from "Kerr-chunking" (my apologies to the Kerr family,
my maternal great grandparents, BTW!)

I wonder if the salesman simply assumed that you were a ham, since you seemed
to know what to do. In your post, you mention that you contacted the ARRL
about this. I'm curious as to what legal enforcement actions a civilian,
non-profit organization can bring to bear.

This same controversy raged years ago when Sears came out with a 2M mobile rig
- and for some reason, ham radio lives on...IMHO, we are becoming increasingly
concerned about the "possibility" of harm to our hobby that some of us are
beginning to sound a little paranoid (not aimed at the poster...) I think we
should be pleased that there is a widely-accessible manufacturer producing
high-quality, low-cost stuff for us to buy.

Or am I missing something?

Best 73,

Gerrry

330. Repost from Medical Newsgroup: Banning Transmitters

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-06 13:28:02 UTC
From: rbolt@ccmail.gsfc.nasa.gov
Message-ID: <rbolt-061094083508@bolt.gsfc.nasa.gov>
Source record: 258948

Banning Transmitters:

Your hospital, if you try to implement such a regulation, is totally approaching this problem from the wrong side, and is toally unenforceable.

First, you probably have a problem with your equipment and shielding of it. Banning transmitters ain't going to solve anything. Be aware, almost ANYTHING electrical can emit radio interference, even more than a two-way radio or cellular phone. Why do you think airlines, and the FAA, ban the use of radios on airplanes? With airlines, it does usually have to deal with the FM radio band having the potential to cause some interference with navigation. But to ban transmitters in a hospital would involve more than banning cell-phones and two-way radios. You would also have to ban televisions, am/fm radios, hearing aids, calculators, microwave ovens, and even the garbage disposers in your hospital's kitchen! You would also have to ban the wearing of pagers, use of two-way radios by your hospital's engineering department, and emergency department crews (fire/police dept) you would not allow in the hospital, since they all are required to carry transmitters. You just can't get around the technology. It just doesn't involve things like cell phones and two-way radios. Anyone who is telling you otherwise, knows little about radio!

Anyway, below shows a little slice of the radio spectrum. I don't know what you plan to do here. Radio waves emitted from these sources are entering your hospital right now! Most of these transmissions are obviously stronger than any personal communication devices carried into your facility. You can't really bury your hospital one-mile underground and hope then you're getting enough radio shielding.

But just a side-note here: Anyone using a cellular telephone has to be aware that their conversations are hardly secure, although if you have a newer, more-expensive digital model, and the cellular system you are using supports it, and you're in digital mode, does offer 'some' better security. But cellular conversations are being overheard right now by thousands of scanner users. Some unenforceable law was passed by Congress a while back making it illegal to listen to cellular calls, to allow the cellular industry to sell the 'illusion' that your calls are private. But with probably a million cellular capable (or easily modifiable) scanners in people's homes, the law is rather worthless. That is in addition to many cellular telephones themselves that can be altered, and switched into a test mode, which turns them into a cellular scanner! So just be careful on what you say on a cellular phone. You never know who else is listening.

THE RADIO SPECTRUM

This is an approximate look, to help in searching frequencies on a scanner or shortwave radio. Just be aware, having the right frequency may not be enough, in tuning to a certain frequency. The time of day, atmospheric conditions, location, mode you're in (AM, SSB, Narrowband FM, Wideband FM, etc.), and your equipment, are also equally important. You'll find most transmissions are broadcasted in Narrow-band FM. Some main exceptions are shortwave (AM & SSB), commercial AM radio (AM), commercial FM radio (Wideband FM), television (Wideband FM), citizens band radio (AM & SSB), aeronautical communications (mostly AM), and some military VHF/UHF (Wideband FM). Most all scanners will pick a default mode for you, depending on what frequency band you are in. But many scanners also let you manually switch between modes (AM, FM, etc.) and frequency search spacing (5 khz, 12.5 khz, etc.) if the default modes are not correct. Happy Listening!!!

FREQUENCY USES/SERVICES
(in Megahertz unless
otherwise indicated)
---

10 - 150 khz Military/government, submarine
(.01 - .15 MHz) communications.

150 - 535 khz Longwave Band, beacons, foreign broadcasts,
(.15 - .535 MHz) maritime.

535 - 1700 khz Your standard AM radio dial.
(.535 - 1.7 MHz)

1.7 - 30 Shortwave/High Frequency Band. Broadcasting,
two-way government, military and commercial
communications, amateur radio, CB radio (approx.
27 MHz), others.
Shortwave - Approx. Range Meter Band
1.8 - 2.0 160*
2.3 - 2.495 120
3.2 - 3.4 90
3.5 - 4.0 80*
3.9 - 4.0 75
4.75 - 5.06 60
5.9 - 6.2 49
7.0 - 7.3 40*
7.1 - 7.35 41
9.4 - 9.9 31
10.1 - 10.15 30*
11.6 - 12.1 25
13.57 - 13.87 22
14.0 - 14.35 20*
15.1 - 15.8 19
18.068 - 18.168 17*

17.48 - 17.9 16
18.9 - 19.02 15
21.0 - 21.45 15*
21.45 - 21.75 13
24.89 - 24.99 12*
25.6 - 26.1 11
28.0 - 29.7 10*
(In general, the lower shortwave frequencies
<higher meter band> are received better during
the night, while higher frequencies are re-
ceived better during the day. There are also
some amateur radio bands between many of these
shortwave bands(*). Consult a shortwave guide
for more detailed information.)

30 - 50 Very High Frequency Band. Government, business,
walkie-talkies. Also, cordless phones and
'baby monitors' found about 46 - 49 MHz.

50 - 54 Amateur radio 6 meter band.

54 - 72 TV Channels 2-4.
Channel 2 Audio (Wideband FM) 59.75
Channel 3 Audio (Wideband FM) 65.75
Channel 4 Audio (Wideband FM) 71.75

72 - 76 Manufacturing, remote control, eavesdropping
bugs, etc.

76 - 88 TV Channels 5-6.
Channel 5 Audio (Wideband FM) 81.75
Channel 6 Audio (Wideband FM) 87.75

88 - 108 Your standard FM radio dial.

108 - 136 Aeronautical communications (AM).

136 - 138 Satellites.

138 - 144 Military communications.

144 - 148 Amateur radio 2 meter band.

148 - 150.8 Military use.

150.8 - 174 Business, highway, law enforcement, government,
weather, maritime.

174 - 216 TV Channels 7-13.
Channel 7 Audio (Wideband FM) 179.75
Channel 8 Audio (Wideband FM) 185.75
Channel 9 Audio (Wideband FM) 191.75
Channel 10 Audio (Wideband FM) 197.75
Channel 11 Audio (Wideband FM) 203.75

Channel 12 Audio (Wideband FM) 209.75
Channel 13 Audio (Wideband FM) 215.75

216 - 220 Maritime and aeronautical.

220 - 222 Land mobile communications.

222 - 225 Amateur radio.

225 - 400 Military aviation and space.

400 - 406 Military and government.

406 - 420 U.S. Government.

420 - 450 Amateur radio.

450 - 470 Ultra High Frequency Band. Business, industry, military, fire, government.

470 - 512 TV Channels 14-20, shared with law enforcement.

512 - 824 TV Channels 21-69, others.

824 - 849 Cellular telephones (receivers/handsets).

849 - 851 Aeronautical telephones (ground-based towers).

851 - 866 Business, public safety, trunked systems.

866 - 869 Public safety, law enforcement, trunked systems.

869 - 894 Cellular telephones (towers).
Note: Even though listening to cellular telephone calls is technically illegal in the United States, one will usually do better listening to calls on the tower frequencies, as opposed to the handset frequencies. This is because most cellular phones transmit less than one-watt of output. So unless the cellular phone is very close to you, you will have much more luck scanning the more powerful towers, which transmit/receive for each cell site.

894 - 896 Aeronautical telephones (handsets).
Note: In scanning airplane telephones, you will usually do better listening to the handset frequencies, instead of the tower frequencies, unless you are very near a ground transmitter. But, in any event, call traffic heard on handset frequencies is very scant.

896 - 901 Private land mobil units.

902 - 928 Land mobile, amateur radio, personal communi-
cation units, cordless telephones.

928 - 932 Radio paging.

935 - 940 Business radio.

941 - 944 Government and non-government fixed services.

944 - 952 Broadcasters' studio-to-transmitter links.

952 - 960 Private fixed services, paging.

960 - 1240 Aeronautical navigation.

1240 - 1300 Amateur radio.

1300 - 1350 Aeronautical navigation.

1350 - 1400 Radio location.

1400 - 1427 Radio astronomy.

1427 - 1429 Point-to-point, mobile, space.

1429 - 1660.5 Various satellite transmission uses.

1660.5 - 1668.4 Radio astronomy.

1668.4 - 1700 Meteorological aids.

1700 - 1850 Meteorological satellites, U.S. Government.

1850 - 1990 Fixed point-to-point, microwave.

1990 - 2110 Broadcast studio-to-transmitter links.

(end)

Obtain one of those ferrite chokes that Radio Shack sells. The RFI usually gets into the opener from the long wire that runs from the opener to the button near the kitchen door. Put the ferrite choke close to the opener with about a dozen turns of this wire around it. Good Luck!

I really think it's more a matter that some folks just wear their shorts a bit to tight.

Around this area, DFW, "callsign" is about all that is needed on most of the repeaters to get a response.

Even easier, get two 0.01 disc ceramic caps and bypass the two wires going
to the remote pushbutton to the screw which holds the cover of the garage
opener in place.

>to the paper/binding quality perhaps a note to CQ would be in

i think this has been talked about by folks like Wayne Green, Hugh Hefner, and others in the magazine publishing business.

the cost of paper has been skyrocketing. fortunately there have been breakthroughs in ink and paper combinations that permit virtually tissue thin pages yet ink that won't rub off on your hands. compare 50 or 100 pages of today's publications to 50-100 pages of 25-30 year old magazines to see a difference.

probably CQ needs to consider going to what's called a "perfect binding" like QST has. i say this because i recall CQ is saddle stitched and the point where the staples go through the paper are high stress points.

putting the mag in a bag would help.

In info hams digest, moritz@ipers1.e-technik.uni-stuttgart.de says:

>WOW!

>Where did you get this information from?

Well, continental Europe runs on 220V although it could be 230V it is still called 220V. In the UK and Ireland, they run 240V on one phase with the other phase connected to ground not only in houses but also on the supply poles. This is not always the case in Europe.

In some places 220V is split in two with 110V in each which was the basis for my answer. This is slowly disappearing. Did you not know that Paris, Rome, Brussels and other places had 110Vin the past? I bet you didnt.

I was posted in Saudi during the Gulf War. There are a total
of five licenses in the country, I believe. Four belong to members
of the Royal Family with the other license belonging to the club
HZ1AB. HZ1AB is on the Dhahran Air Base and is open to members of
the military and select foreigners. I received my upgrade to Tech
while there. It is a great bunch of hams with a very nice station
(a very nice 160m rombic was built while I was there).

With the CEPT agreement coming, we may see a two level license scheme. The international agreement has two licenses, one no code, 30 Mhz and above. The other license has 12 wpm requirement and full priveleges. No Novice, Advanced or Extra.

I would keep Novice with Element 2 and a 12 wpm test. I would combine Elements 3a and 3b so that Tech is Elements 2 & 3. General is Elements 2, 3 and 12 wpm. Upgrade by completing the element you lack. Have an Extra that is for testing and Offical Observer, rewarded with 1000 watt priveleges (test with a combined Elements 4a & 4b).

Novice would have full CW priveleges 160 thru 6m with 250 watt power. (No international recognition - US operation only). Also voice on 17m, 10m and 6m. Generals would have full priveleges on all bands but limited to 250 watts. Techs stay the same. Extras have full priveleges plus 1000 watts.

Tests would be harder but with less elements or classes to deal with. Novice would focus on HF (that is why 6 meters which is bridge between HF and VHF). Techs are VHF/UHF. Generals and Extras across the board with the Extras having the power in watts and testing/reviewing ham standards.

Source record: 258937

MarkH (markeh@netcom.com) wrote:

:>>Just wondering if any one else is having problems with valematic automatic
:>>remote control garage doors? I seem to have real probs on 80m especially on
:>>cw. The garage door actually starts to go up and down!

: I had a similar problem, and fixed it by putting a small capacitor (I don't
: remember the exact value, but I don't think its really critical) across the
: leads of the control switch at the opener.

If this doesn't work, I would try common-mode chokes on all the wires leading to the control unit. Most of the time, it is the wires that are actually picking up the signal, acting as an antenna. Try F- or FT-140-43 ferrite toroids. (Available from Amidon, Palomar, etc.)

: Capacitor on - - no problem. Now
: I need to fix my hi-fi amplified subwoofer. Everytime I transmit on 40 or
: 80, a tremendous (400 watt) audio BOOM. Really shakes up the cats....hi

DO NOT try the capacitor across the speaker leads. Some solid-state amplifiers are unstable into a very capacitive load like this would present. They can break into a full-power, usually ultrasonic oscillation, sometimes resulting in the fast demise of the audio-output transistors. Use a common-mode choke as described above.

The ARRL Automated Electronic Mail Server, info@arrl.org, has a number of RFI files. I also recommend our book, Radio Frequency Interference -- How to Find It and Fix It. Contact djahnke@arrl.org for ordering information.

Back when I actually found time to get on the air (I DID get to play in the /125 event -- a blast!!!), I was using 250 milliwatts to get my Worked All States award. One day I was chatting with a ham in Florida (sure wish I remembered his call!), who was running 100 watts. When he heard I was 250 mW, he decided to drop power, too.

He cut back to 50 watts, whereupon I told him I couldn't tell the difference. He then cut back to 10 watts, then 5 watts, then one watt. At the latter I told him he was down to only 10 dB over S9! He then came back to me at RST 579 and said that he couldn't even see his power meter moving. I told him he was still Q5.

Then he told me to wait. About 15 seconds later he was in there, as weak as I could imagine. I copied most of what he had to say, but told him he did have to increase the power as he was only about Q3 and I was having a real hard time. He came back with the CW HI HI, and told me that I had just copied 5 watts into his dummy load.

I think we both learned something that day. :-)

How about the LIMARC Hamfest? It's at the NY Institute of Technology
on Long Island on Oct 16. Should be a big one!!

New equipment vendors will be there, Free tune-up clinic (for your
radio, not your car), free parking and refreshments.

Talk in in W2VL 146.85/146.25 PL 136.5. W2VL has very wide coverage
and can be hit from areas adjacent to Long Island (parts of NJ, CT
and the Bronx and Manhattan).

Entrance Fee $6 or $7 (I can't remember which) with Sweatharts and
Harmomics Free!!!

If you need more info, e-mail me or call me at (718) 738-9522 evenings.

Yes, I am a member of LIMARC and this is an advertisement :-)

What do you mean by a barrel connector? A UHF type bulkhead connector?

What do you do with the center conductor? Just shove it into where the
center pin would go?

Can this be done with N connectors?

Inquiring minds want to know...

355. GB2RS News 9th October 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-06 18:24:39 UTC
From: dave@llondel.demon.co.uk
Message-ID: <781493079snx@llondel.demon.co.uk>
Source record: 258943
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 9th of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Next weekend sees the 37th Jamboree on the Air and this year, over 250 Special Event callsigns have been issued. The event lasts from 0001 UTC on Saturday the 15th to 2359 UTC on Sunday the 16th and Scouts and Guides all over the world will be using amateur radio to celebrate their shared interest. All UK groups which have told RSGB HQ that they are participating, have been sent an information pack which includes a list of stations taking part. Anyone else who would like a copy of this list is asked to send an A5-size Self-Addressed Stamped Envelope to the Amateur Radio Department at RSGB, Lambda House, Cranborne Road, Potters Bar, Herts EN6 3JE.

A meeting between the RSGB and the Director of the Science Museum was scheduled for last Thursday to discuss the future of the GB2SM amateur radio exhibit. More information on this next week.

The next RSGB Microwave Round Table meeting is next Sunday the 16th at the Flight Refuelling Amateur Radio Society Clubhouse, Merley, near Wimborne, Dorset, commencing at 10am. The attractions include technical talks, calibration and alignment facilities, plus of course the usual round table discussions. There will be a bring and buy stand, hot drinks and snacks. All are welcome. For further details telephone Mike, G3LYP, on 0494 881298.

It is with regret that the Radio Society of Great Britain announces the resignation from Council on 10 September 1994 of Immediate Past President Peter Chadwick, G3RZP. Peter's resignation follows a decision by a majority of Council to propose certain minor changes in the Articles of Association to the membership of the Society at an Extraordinary General Meeting to be held in December 1994. The full proposals and explanatory commentary will appear in the Society's Annual Report and Accounts to be circulated to members during November. If accepted, the changes allow Council a degree of flexibility in the future conduct of its business and correct certain anomalies that exist in the current wording of some Articles. Peter felt that he could not support the changes at this time and, because Council is collectively responsible for sponsoring these amendments to the Society's constitution, decided he should resign his seat on Council.

Council will miss Peter's considerable technical expertise and good-humoured contributions to its work and wishes him well in the future.

The Port Talbot Amateur Radio Society celebrates its 50th Anniversary in 1996 and is calling all ex-members of the Neath-Briton Ferry (now called the Port Talbot) Amateur Radio Society formed in 1946. If you have any information or would like to attend the celebration, please contact the Secretary, GW0NKF on 01639 892311.

A new RSGB Liaison Officer (RLO) has been appointed for the Tyne and Wear Area. He is Keith Ritson, G0PKR, and his address is 14 Dunsdale Road, Holywell, Whitley Bay, Tyne and Wear NE25 0NG. Keith's telephone number is 0191 237 1963.

GB3TG, the Milton Keynes 10GHz ATV Repeater, went off-air, on or about the 22nd of September due to a nearby lightening strike. It has now been dismantled for repair and refurbishment which is estimated will take a minimum of four weeks. For further information contact the repeater keeper Dave, G4NJU, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the Azores, LA0CX will sign CU2/LA0CX from next Wednesday until Sunday the 16th, with special emphasis on 10.103MHz and 18.073MHz.

From St Helena, ZD7 operators will be especially active on Friday the 14th of October from 1800 to 1900 UTC as part of "Radio St Helena Day". On CW, check around 7.08MHz {Newsreaders - this frequency is correct, though rather high for CW} and on SSB check around 14.22MHz and 21.275MHz.

And from Macau, G3SXW and G3TXF will sign XX9TSX and XX9TXF respective from Taipa Island from Wednesday the 19th until Thursday the 27th of October. Activity will be on all bands, CW only.

Now the event(s) for today, Sunday the 9th of October:

Today Sunday is the last day of the RSGB International HF and IOTA Convention being held at the Beaumont Conference Centre, near Windsor in Berkshire. This is an event which has something for the beginner as well as the expert. And although many of the Convention visitors stayed overnight, the event is open to day visitors. There is a full programme of lectures, slide shows and discussion sessions on today and many special interest groups will be represented. Morse tests are available on demand, subject to producing two passport-type photographs and test fee. Details of the HF Convention can be found on page 19 of October's edition of RadCom.

The All Ireland International Radio and Hobbies Exhibition is being held at St Patrick Hall, Cathedral Road, Armagh. Doors open 12 noon. The event features many trade stands, including radio, computer and much more. Full catering and bar facilities are available.

The Kidderminster and District Amateur Radio Society Rally is being held at Stourport-on-Severn High School, Minster Road, Stourport-on-Severn. Doors open at 10am. The event features trade stands, a bring and buy

stall and refreshments. Talk-in is on 2 metres and 70 centimetres.

The South Devon Radio Club Computercations'94 Amateur Radio and Computer Rally is being held at the Hillhead Campsite, Hill Head, Kingswear Road, Brixham. Doors open at 10am. The event features trade stands covering radio and computers, a bring and buy stall, a raffle and refreshments. Talk-in is on 2 metres, channel S22.

We know of no Rally for next Sunday the 16th which is Jamboree On The Air weekend but the following Friday and Saturday, the 21st and 22nd of October, the Leicester Amateur Radio Show which is held at The Granby Halls, Aylestone Road, Leicester. This is just off the M1 motorway, junction 21. Parking arrangement are the same as in previous years. The old cattle market is still being used but it has a height restriction. Doors open daily at 10am, or 9.30am for disabled visitors. The event features an extensive trade exhibition, an RSGB Book and Information Stand and a bring and buy stall. Morse Tests will be available on demand during the two days, but prospective candidates are reminded that they need to provide two passport-type photographs, together with the test fee. The RAOTA AGM will be held in the conference room on Saturday. Full catering and bar facilities will be available. Talk-in will be on channel S22 and SU22 by GB2GH. The October edition of RadCom has full details of the show including a stand layout. Further information can be obtained from Frank Elliott, G4PDZ, on 0116 287 1086.

Now for the HF contest news:

The RSGB 21/28MHz CW Contest takes place next Sunday the 16th of October from 0700 to 1900 UTC. See the June edition of Radio Communication, page 82 for further details.

Next some VHF contest news:

An RSGB 24GHz Summer Cumulative Contest takes place today, Sunday the 9th, from 0900 to 2100 UTC. See April's RadCom for details.

The first of five RSGB 432MHz Cumulative Contest takes place next Wednesday, the 12th of October, from 2030 to 2300 local time. See the July edition of RadCom, page 82 for further details.

The penultimate event in the RSGB 144MHz CW Cumulative Contest takes place next Friday the 14th of October from 2030 - 2300 Local Time.

And now the solar factual data:

The period from the 26th of September to the 2nd of October has seen solar activity at very low levels, with geomagnetic activity declining to quiet conditions. No flares were reported. Sunspot indices generally declined throughout the period and meaned at 28. Solar flux levels have varied little day to day and averaged only 74 flux units. The geomagnetic field generally declined from unsettled levels of up to 20 units on the 26th of September, down to very quiet levels of only 3 units by the 1st of October. The period averaged an Ap of 10.7 units.

The state has been 'nil, nothing to report'. The 90 day flux level was 78 units on the 30th of September.

The aa indices, as reported by the British Geological Survey for the period from the 20th to the 26th of September, were mainly quiet. The 23rd was down to only 7.3 nanoTeslas with the most disturbed day being the 25th, up to 29.0 nanoTeslas with periods up to 80 nanoTeslas. The period averaged 15.5 nanoTeslas, about K2. The X-Ray flux levels have remained very low only, averaging A2.3 units. The electron fluence varied little and stayed at moderate levels.

The September sunspots averaged RI 26.7, with a high of 65 on the 5th, and lows of only 8 on the 15th and 16th. The six month smoothed number for March was 34.4 plus or minus 0 5.

The solar flux average for September was 81.1 units, with the high at 95 units on the 5th, and the lows at 70 units on the 17th, 19th, 20th and 21st. The geomagnetic field averaged an Ap of 10.1 units with the most disturbed day being the 9th up to 30 units, and the quietest being the 22nd and 23rd with levels down to only 3 units.

I'll repeat the figures. Spots - 28; Flux - 74; Ap index - 10.7; X-ray flux - A2.3. Averages for September: Spots RI 26.7; Flux 81.1; Ap index 10.1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers averaged 6.9MHz, with the best day being the 1st of October, up to 7.5MHz. The darkness hour lows averaged 2.9MHz with spread F being reported on some days, lasting up to 6 hours on the 28th. Very small amounts of blanketing E was also reported. With the seasonal changes the highs are now becoming earlier about 18.00 hours, with the early morning lows at 05.00 hours.

I'll repeat the figures. Highs - 6.9MHz; lows - 2.9MHz.

And lastly the solar forecast:

This week the more active side of the sun will be rotating away; solar flux figures are expected to be into the high 70s but falling throughout the period. The geomagnetic field is expected to be mainly quiet. MUFs in the south are expected to be about 21MHz during daylight, with darkness hour lows being about 10MHz. North/south paths are expected to be best, but east/west paths are expected to be open during darkness hours on the lower HF bands.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Hotel and G7 Tango Tango series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Kilo series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Scott Turner (scott@lvld.hp.com) wrote:
: ron miller (ron@fc.hp.com) wrote:

: : "monitoring" sounds so uncommitted. Everytime I hear it I silently
: : respond with ' so what? Do you want a medal or something?'

I've been thinking this thought since about 1977 by the way. Some
things won't change (neither the awkward language nor my distaste for it.)

: That's too bad. Consider the newcomer's plight. On the one hand, local
: conventions suggest certain practices. Since they're the new kid on the
: block, they conform. Then the non-conformest silently ridicules them
: for their conformity. Nobody wins.

I agree that nobody wins by hassling newbies. Also note that I did not
suggest that I correct anybody at any time. (I don't think I've transmitted
yet in 1994. Maybe not in 1993 either. I talked all day with N0MFW in
'92 though.....)
I just abhor the language that the newbies are copying. And fact that
not-so-newcomers are propagating it.
I am disappointed that since the infant days of 2m FM popularity,
it has always been so. Some little flaws apparently get built into
the culture.

: OK, then how about just "KG0MR listening -- anybody want to talk?" Then you
: save yourself from the inevitable lecture on how "we don't use CQ on FM
: repeaters dummy". 'Course you still brand yourself as "different".

That works. And I most certainly AM different. :-)

: : I too am a fan of plain language when it makes sense.

: As am I. Which is why when asked things like "what's your handle" I'll
: simply reply "my name is Scott". When someone says "73", I'll usually
: reply with something like "Talk to you later... " or some similar
: regular old English sentence. And when someone says "QSL, QSL", well...
: I keep a barf bag in the car and try not to hit the PTT while using
: it. And I go on with the conversation. No big deal, just my
: contribution towards the reduction of jargon. And a whole lot better
: and effective than making a big deal out of the whole thing or making
: someone feel bad. ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

You accuse me of doing something I have not done. My thoughts are my
own and I refuse to be corrected on them. My actions I am accountable
for. I should not have shared my thoughts on the topic. Apparently you find
them offensive. Sorry.

From: utz@ax.ibase.org.br
Message-ID: <Cx9MHK.6t8@ax.ibase.org.br>
Source record: 258968

can somebody give a hint where to get a pair of Radio-Modems
to connect a PC in the middle of nowhere to some
phone-line about 100 miles away?

We are a NGO in Brazil working in the field of demo-
cratization of information. In this sense we are looking
for some low cost equipment to allow as well persons far
away from civilisation the access to computer-networks
and BBSs.

Any hint with Mail, E-mail or Fax-number of manufacturer
appreciated.

Charles Richards (chuck62@freenet3.scri.fsu.edu) wrote:
: Wwhitby (wwhitby@aol.com) wrote:
: : Just my $.02 about what i've read in these posts:

: : 1. On 2m and 73cm I state that I am monitoring or I do my best to respond
: : to a ham who is monitoring as well. I am not insecure about responding to
: : hams I don't know - I actually like talking to people who I don't know.

: : 2. As far as courtesy: There are a few lids on 2m in this area. They
: : cut in on good QSOs that hams are having. Having an informal net is
: : onething (o.k. in my book) but these guys just but in. An example, I was
: : having a QSO with our club president when one of the lids broke in. He
: : had something to tell the president relating to club business. That was
: : ok, but as soon as he was finished with club business, he started talking
: : about bacon and chicken prices and where to get the best buys - totally
: : unrelated to our conversation. Next his buddy starts in and they continue
: : their chat about food prices. After about 5 minutes they sign off and the
: : club president asked if I was still there. He wasn't happy and he could
: : see that I was irritated.

This happened to me just yesterday - and is happening with alarming frequency.
I don't really understand it, either. I wouldn't interrupt a conversation
like that in person - taking over the entire conversation - so why do it
on the air? In my case, the people who took over never even acknowledged
I or my friend - they just had their own QSO and I had to call my friend
on the phone to finish our conversation. :-(

: I want to ask you guys for your opinion concerning repeator courtesy. I
: just got my tech ticket 2 weeks ago. When I'm monitoring, I'll say
: "KE4QPU monitoring" about every 15-30 min. Of course, I am careful not to
: interfere with anybody's communications, and to keep in mind that I am
: actually "borrowing" somebody's equipment (the repeator). I hear very few
: other hams in this area saying that they are monitoring. Not wanting to
: sound like a "Lid", I asked several local hams if this was a nuisance and
: they all said it was OK, but they just didn't bother doing it. I have
: Chuck...KE4QPU

Thanks for asking about protocol - I wish more people would do this. Even
though I have been hamming for 17 years, I was once new and know how it
feels. But you can keep from being a jerk in whatever you do.

ARLD061 DX news

ZCZC AE59
QST de W1AW
DX Bulletin 61 ARLD061
From ARRL Headquarters
Newington CT October 6, 1994
To all radio amateurs

SB DX ARL ARLD061
ARLD061 DX news

Thanks to Tedd, KB8NW, the Ohio/Penn DX Bulletin, Frank, AH0W/OH2LVG, the Yankee Clipper Contest Club PacketCluster network, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, G0MMI, Adam, N7VEW, and the Contest Corral column from QST magazine.

RWANDA. It has been reported that Hartmut, 9X5HG, has returned to Rwanda and is active once again. Several southeastern USA stations worked him on October 1 around 0330z on 7028 kHz.

ETHIOPIA. ET3BT has been on the 14226 DX Net almost daily. Try between 1800 and 2230z.

BURUNDI. 4U/F5OWB/9U has been spotted on 14240 kHz around 2100Z. QSL via UNSCF Radio Tech, PO Box 200, Bujumbura, Burundi.

PACIFIC DXPEDITION DELAYED AGAIN. Masa, JE1DXC, aka A35XC, continues to have problems with flight reservations. This has caused delays in his 3D2, T30 and T2 DXpedition.

MOUNT ATHOS. Tokyo PacketCluster spots show Monk Apollo, SV2ASP/A has been active on RTTY. Listen for him around 14083 kHz between 0700 and 0730z.

MADEIRA. DL8KWS/CT3 and DL3KUD/CT3 will be active on all bands October 6 through 27.

MICRONESIA. JA0VSH and YL JG0PBJ should be active now as V63KZ and V63MP, respectively, on 160 through 10 meters, including the WARC bands, through October 10. Their local evening operating will be CW only. As of press time, there were no spots for this one on the local DX PacketCluster. QSL to their home calls, direct or via the JARL Bureau.

ANGUILLA AND SINT MAARTEN. Warren, WB1HBB, will be vacationing with some operating from Anguilla as VP2E/WB1HBB October 18, 19 and 20. Sint Maarten is slated for October 21 through 28 using the call PJ7/WB1HBB. Try 14.263 kHz at 1230z and 2100z. QSL via WB1HBB.

REVILLA GIGEDO. This is to correct some information released on the planned DXpedition to XF4M by Frank, AH0W/OH2LVG and company. Their 30 meter operation will not, repeat not be the first such operations from Revilla Gigedo.

QSL TIPS. G0MMI reports that he is the manager for LX1DM. QSL contacts from 1990 to 1993 to his Callbook address. Also, he is no longer the manager for YI1RJ, Raid, who is now in Jordan. Adam, N7VEW, is now the QSL manager for Randy, TJ1JR. Please QSL to Adam's current Callbook address with SASE.

THIS WEEKEND ON THE RADIO. Tuning in over the weekend will reveal the Hambrew Fall Festival, Ibero-American Contest, Illinois and Pennsylvania state QSO parties, and VK/ZL/Oceana CW DX Contests. Check out pages 125 and 126 in September QST for details on these on the air events.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 OCTOBER AND FORECAST FOR 07 OCTOBER - 09 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 05 Oct
Daily Proton Fluence >1 MeV: 5.0E+06
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 5.5E+08 (high)
X-ray background: A3.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Oct 08 Oct 09 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Oct: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: minor storm periods during local
night

Estimated Indices : A K Observed A Index 05 Oct
Learmonth 22 3335 5332
Fredericksburg 23 25
Planetary 30 33

Observed Kp for 05 Oct: 4445 5443
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Oct 16 Unsettled to active
08 Oct 16 Unsettled
09 Oct 12 Unsettled
COMMENT: Magnetic activity did not decline as expected and is now
expected to decline today, with possible active periods during local
night.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Oct fair-normal fair-normal poor-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Oct normal fair poor
08 Oct normal fair poor
09 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
06 Oct -29 about 25% below predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
07 Oct 0 About 20% below predicted monthly values
08 Oct 15 About 10% below predicted monthly values
09 Oct 15 About 10% below predicted monthly values
COMMENT: Ionospheric conditions are still remaining depressed, at
both Sydney and Townsville. The expected recovery did not occur. The
ionosphere has now been depressed for 3 days at Sydney. Ionosphere
is now expected to recover half way through the UT day today.

369. HOSSTRADERS radio tailgate fest & flea market Oct 7 & 8 NH

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 00:24:52 UTC
From: mc@shore.net
Message-ID: <3724gk$osh@shore.shore.net>
Source record: 258950
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner,rec.collecting

Most of us here in NE are preparing for our regional New England flea market Hosstraders in Rochester NH Fairgrounds starting Friday Oct 7th at 9:00 AM! Its the best flea ever - really a big tailgate party with some good stuff cheap! Hard-core Hosstraders get there early on Friday and pay $20.00 (until 3:00PM when it drops to $5.00) to get a "good" spot to set up. There are usually some great deals on Friday. Saturday it starts at the crack of dawn and it gets pretty crowded by 10 AM. Sales are usually pretty good for those who are inclined to do so. I always have a table of stuff and right now I have many GRC-109 transmitters to find homes for. It starts to wind down around noon and people start to head out around 2. The place is empty at 4.

The Hosstraders semi-annual flea market and tailgate fest is always a real winner. It seems that almost everyone goes home happy. So if you've never been to it (it used to be at the Deerfield NH Fair Grounds abd it was called Deerfield) take a drive up I-95 to Portsmouth NH then head north on Route 16 AKA the (Captain) Spaulding Turnpike to exit 13, turn right and into the

>James - KE4LAY

James, there are indeed evil spirits in the air, and some of them
will tell you to ground your rig if you want to get out. Don't
listen to them.

Your RF belongs up in the air where it can radiate like the
Chief Op intended, not run through lossy earth like your neighbors
would prefer. RF energy is expensive to generate - treat it like
the precious thing it is. Never allow it to flow through anything
that soaks up power like plain 'ol dirt.

The only two reasons you need to "ground" your rig are for safety,
meaning 60 Hz, not RF, and for lightning protection. DO heed the
advice of those who know about those things, but keep your RF away
from anything that dissipates instead of radiates and the DX will
come your way.

73, W7LZP

Not that is really a big deal, but I don't see how this situation is a *violation* for Radio Shack. They are a retail dealer of electronic equipment, and have the responsibility to instruct their _employees_ not transmit on a ham rig unless they have a license. In this case, however, you were the operator of the radio, and if you weren't licensed to use it, *you* are in violation. Radio Shack can't control what others do, only their own workers (maybe).

Again, no biggie, but a different viewpoint on this situation.

Can only answer part of your question: Why all the resistors in parallel? Since parts have become so cheap and labor so expensive, manufacturers have found it more expedient to parallel or series components to create the value desired rather than spend the effort to stock many different part numbers. Two 10Ks = either a 5K or a 20K with no extra documentation at all. Make it three or four or more and the savings get even larger. Granted, the purists will complain about reliability when using more parts, but the reliability of components run at low power these days is so much better than the old days that it doesn't really matter.

Hope this helps.

Doug:

You will need to contact the local Bahamian telephone company (Batelco) to obtain a reciprical license to operate anywhere within the Bahamas.

It has been many years since I had one so the cost will surely have increased from $10 charged me back in 1989.

FYI, Ask for the person in charge of licensing amateur radio stations.

John Monson

No, since into a dummy load you are really not radiating the signal.
(At least not far enough to be detected, we would hope. :)

>This sounds a lot like kerchunking defined.

Perhaps, but who is the control operator? The person walking into
a RS Store perhaps is not licensed, and therefore cannot be the
control operator, and therefore has no frequency authorizations with
which they can conduct the test.

Point on the above regulations is therefore moot for a non-licensed
person.

While I am waiting for my ticket to arrive for the No-Code Technician license, I decided to do that which I swore I would never do: Learn Code. ;) (Hey, it helps defeat the blues waiting for the ticket, REALLY! :)

I've gotten to the point where I can send code pretty good. I know all the letters and numbers, working still on the symbols/punctuation.

MY PROBLEM: I can't receive worth the darn. :(Actually, I just have a real hard time hearing the sound and connecting in my brain to the actual character, yet sending goes like a snap.

Is this a common "hurdle" to overcome, or am I just odd. :) (Thankfully no one here knows me well enough to add much to that one... :) I am using the SuperMorse program (EXCELLENT!) to learn, and am wondering if the code tapes may have been a better route, and this is a side-effect of my choice in learning.

Thanks to one and all for comments.

> stuff deleted about something picked up in previous posting

yes we do have a 4 metre allocation in the UK. It's 70.000 - 70.050 MHz.

Also the following countries also have a 4m allocation: EI ZB 9H and 5B

During VHF NFD (July) our club (Reading & DARC) regularly work into EI and
ZB on 70 MHz.

Locally, most of 70 MHz seems to be occupied by Packetcluster users.

Hi Alex,

> Does anyone know if there is an alternative to using a ground spike, or
> domestic radiator, to obtain an earth connection for my HF receiver? Are
> there other simpler ways to obatin an earth? Artificially? If you could help
> me, please drop me a note.

That's the second time this question has been asked this week in this news group!

One solution is to cut a few quarter-wavelengths of wire, one for each of your favourite bands, and connect them all together at one end. Connect that end to the chassis of the receiver. Then drape the free ends around room - no need to keep them straight. You could tack them to the skirting boards and around doorframes, or simply spread them around under the carpet.

Example lengths:

7 MHz about 33'
10 MHz about 23'
14 MHz about 16'6"
21 MHz about 11'6"
28 MHz about 8'3"

Hope this helps.

Hi Mike,

> well the title says it all. please post or e-mail.

There are boatloads of excellent morse tutors for most types of computer.
Not sure where you are, but if you're in the UK try the BBS below where
you'll find dozens of tutors for the PC, a couple for the Amiga, one for
the Mac and one for the ST - all free and downloadable on the first call.

If you're outside the UK, add the access code, then 44, and drop the 0
(for USA, 011 44 753 595468).

383. Re: 1/2" CATV hardline connectors?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 13:06:39 UTC
From: josemj1@aplmail.jhuapl.edu
Message-ID: <josemj1-0710940906390001@joses-mac.jhuapl.edu>
Source record: 258852

>
> ...<many techniques for terminating hardline discussed>...
>

The only method which worked for me was to use an N male
connector intended for RG-8 or RG-214:

1. Using a 1/2" drill, enlarge the I.D. of the clamp nut (the thing
that normally slips over the jacketed coax and threads into the
back of the connector) to 0.500" (for 1/2" hardline).

2. Buy a 1/2" compression ring from the hardware store and, using
some precise tool like a Dremel with cutoff wheel, cut the ring
diagonally. This cut will allow reasonable force to compress the ring
onto the aluminum hardline without too much deformation.

3. Prepare the hardline by stripping the outer shield and foam back
1/8" from the center conductor.

4. Patiently file down the center conductor's diameter until it will
permit the N connector's center pin to be soldered on. Solder it.

5. Put it all together.

This technique gives good electrical performance but will not
grip the hardline mechanically very well. Make sure the weight
of the hardline is borne by something other than the connector.

Also, aluminum and copper/brass/bronze get along poorly (they
corrode each other). Be sure to sand and clean all surfaces which
will contact dissimilar metals, and lightly coat these surfaces
with silicone grease or such (the hardware store has this sort of
goop for people with aluminum wire in their houses). Some sort
of butyrate weather coating (such as ScotchKote) on the outside
will also help keep moisture out, as will self-vulcanizing
rubber tape (such as Scotch 23).

Well, Mike, here are my thoughts after teaching ham classes for about 20 years:

1. You obviously have to learn the characters first. I like Gordon West's tape for this.

2. Then you need to build speed. I would suggest a computer program such as SuperMorse. You can find it on ftp oak.oakland.edu (I think) under /pub/msdos/... where ... is something like amateur or radio or something.

3. Always use character speeds of 16 - 18 wpm to build your speed. Gordon's tapes use this approach, called the Farnsworth method.

4. Also, get yourself a code practice set. MFJ makes one all put together for $25 or you can build the one out of Now Your Talking...

5. Spend about 45 minutes per day (minimum) and don't skip weekends on the code. Use about 15 minutes of the time to send with your practice key, with 30 minutes on Supermorse.

In about 3 weeks you will at least be at 5 wpm and probably higher. Get your Novice ticket or code endorsement on your Technician ticket as soon as your get to 5 wpm. I hear many Tech Lites say, "I am just gonna skip 5 wpm and go right to General." I think this is a big mistake. The object is to get on the air ASAP. Your code speed will increase dramatically when you do. Also enter a contest as soon as you can get on the air. The Novice Roundup in late January would be a great one to get started in contesting. Why? Because most of us are competitive and IMHO there is nothing to compare to a well tuned CW operation in a contest. It is a ball!

Good luck. Email me back for further disucssion. 73/72, Jim, W4QO

ARLP041 Propagation de KT7H

ZCZC AP55
QST de W1AW
Propagation Forecast Bulletin 41 ARLP041
From Tad Cook, KT7H
Seattle, WA October 7, 1994
To all radio amateurs

SB PROP ARL ARLP041
ARLP041 Propagation de KT7H

A recurring coronal hole on the Sun's surface is causing some real havoc with the Earth's geomagnetic field. This has caused high absorption and poor conditions on HF bands. The worst day was October 3, when the A index was a very high 65 and the K index was 7 over a six hour period. This area should rotate into view again at the end of the month, and more trouble is expected.

In the short term expect the solar flux to hover in the low seventies, with only unsettled conditions. MUF values will be low, but that is expected as the current solar cycle continues its decline.

Sunspot Numbers for September 29 through October 5 were 24, 22, 23, 22, 22, 34 and 69, with a mean of 30.9. 10.7 cm flux was 74.7, 74.5, 74.6, 74.5, 74.2, 74.7 and 79.4, with a mean of 75.2.

The path projection this week is from Hawaii to Micronesia.

80 meters should be open from 0700z to 1700z, peaking from 0900z to 1600z. Check 40 meters from 0530z to 1800z, and 30 meters from 0430z to 1445z and again from 1900z to 2000z. 20 meters looks good from 1900z to 1200z most days, and on some until 1400z. 17 meters should be open from 1930z to 0730z, and 15 meters from 2000z to 0630z. 12 and 10 meters actually look open over this path, with 12 meters open from 2030z to 0600z and 10 meters from 2130z to 0530z.

Hello Friend Hams.....

I have just purchased a HAL CRI-200 Computer RTTY Interface and am
looking to find some information on same.

1. Does anyone have a manual that I could get a xerox of?

2. What is the power voltage and polarity required at the dc power
adapter socket on the back panel (+12vdc? GND=SHELL?).

3. What is the pinout and interface specifications on the 5 pin
computer I/O port connector? I am assuming RS-232, but it could
be something funky like 5V tty RS-232, or it might even be current
loop (20 ma).

4. What are the cw keying polarities on the two keying jacks?
Any Help is appreciated

Most Sincerely,
Robert D. Keys, ``Boatanchor Bob'', NA4G
rdkeys@csemail.cropsci.ncsu.edu

I usually say "AA3GN listening", if I just will take a call from whoever is
listening, but am not actively seeking a call. On the other hand, if I am
looking to talk, I say something like "This is AA3GN, anyone around?"
I usually don't say "monitoring", unless I hear someone kerchunking,
and I want to let them know that someone else is indeed around.
CQing isn't done on repeaters, at least in this area, although it is on
simplex. There are lots "regional" conventions, I'm sure.

: 2. "Callsign testing" - def. ...
: 3. "Callsign listening" - def. ...
: 4. "CQ from Callsign" - def. ...
: 5. "HELLLLLLP! Callsign" - def. ... (I just had to throw that in!)

: That's pretty much how I view it.
: Now, how do we adopt it as a standard??? (Anyone from ARRL reading?)

Well, at least this fellow from ARRL is reading it, but I am really not the best answer. :-)

I will speak from a strictly personal point of view; I don't think the ARRL should impose its collective will on local custom. I think we would do little more than engender bad feelings if we were to impose national protocols on the specific protocols and usage that have evolved in different areas. When I travel, I often like to buy long, round sandwiches. Here in New England, I call them grinders. If I go elsewhere, I may have to call then Hoagies, Subs, etc. I can generally figure it out. When I can't, the proprietor has invariably figured out what I meant and sold me a meatball "grinder" without comment.

I talk to hams all day on the telephone. When I do, I invariably run across regional variations in dialect and useage. I follow a standard rule; if I can figure out what you mean, you are doing it right. In those few cases where the meaning is different, I ask for a bit of explanation. It seems to work in such a way that people can communicate and enjoy each other without getting bogged down in specific meaning. Besides, I figure if folks from 4 land can understand my rapid-fire New England chatter, I can listen a bit more closely, too. :-)

395. CW Learning: Going slow. :(

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 16:38:47 UTC
From: phillips@eso.mc.xerox.COM
Message-ID: <9410071638.AA08870@zombi.eso.mc.xerox.com>
Source record: 258861

I have the same problem... sending is ok, but receiving is very slow.
I understand this is a common problem.... receiving is always slower
than sending. Maybe the brain can think ahead for sending, and can't
for receiving?

My problem is that I learned the code by looking at it written as "."
and "-" on paper. Now when I send and receive, I "see" the dot-dash
pattern in my mind. That works for 5 wpm sending, but not for receiving.
It takes too long to count the dots-dashes, recognize the end of a
letter, form the picture of dots-dashes in my mind, and then translate it
to a character. That's the wrong way to hear cw.

What I need to do is hear "dah-dah" directly as "emm" (M) phonetically
and not do any translation. Simply hear the sound, and the rhythm of
the spacing to hear the letter.

You probably already do that when you hear "dah-di-dah-dit dah-dah-di-dah"
Oh, you say, that's "CQ". You didn't do any translation, you just heard
it as "CQ". That's the "hurdle" IMHO.

: : : respond with ' so what? Do you want a medal or something?'

: I've been thinking this thought since about 1977 by the way. Some
: things won't change (neither the awkward language nor my distaste for it.)

Understood. As I said, I find much of it distasteful too. I just hate
to see newcomers who are using that language put off because if it. My only
real point was to suggest that rather than shrugging them off, talk to
them and gently correct, mostly by example.

: : repeaters dummy". 'Course you still brand yourself as "different".

: That works. And I most certainly AM different. :-)

Yup, of course I knew that about you Ron! :-) Recognize, however, that
having been licensed as long as you have it's a bit easier for you to be
different than it is for the newcomer.

No big deal, just my
: : contribution towards the reduction of jargon. And a whole lot better
: : and effective than making a big deal out of the whole thing or making
: : someone feel bad. ^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

: You accuse me of doing something I have not done. My thoughts are my
: own and I refuse to be corrected on them. My actions I am accountable
: for. I should not have shared my thoughts on the topic. Apparently you find
: them offensive. Sorry.

Ah nuts. My apologies Ron. I unintentionally implied that *you* were
making a big deal out of things and making people feel bad. I wasn't
trying to do that. I really only meant to suggest a way of helping to
reduce jargon and poor practices on repeaters. That being to talk to
folks and try to use good jargon-free technique, rather than either not
talking to jargon users, *or* overly correcting them. I didn't mean to
put you in the overly correcting camp.

And I *certainly* don't want to play thought policeman with anybody.
Your thoughts are indeed your own. They certainly don't offend me (I'm
just not that sensitive!) but you did offer them for comment so I did
so. I'd hate to think you wouldn't feel free to continue to share your
thoughts.

Again, my apologies for appearing to accuse you of something you're not
doing.

[ Instructions for retrieving 'batterie.ps' are at the bottom of
this message. ]
******************************************************************************

The following article (batterie.ps) is a short article about batteries
and battery charging. It covers many types of batteries that amateurs
might find useful around the hamshack. It does not cover small HT
style batteries, although the principles would be similar.

Most of the batteries that I use are from the local scrapyard, and
were junked from industrial lighting systems, etc. I can usually
get a couple of years of service out of almost any of them, with
a little care, and some thought about bringing them back up to snuff.

******************************************************************************

REVISION of 6 OCTOBER, 1994.

402. scouts talk

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 18:31:30 UTC
From: Ivo=Vankelecom%LOC%AGR@agr.kuleuven.ac.be
Message-ID: <78156909034n12@134.58.40.4>
Source record: 258863

On Saturday October 15th the scouts of Ternat (Belgium) would like to chat with scouts all over the world. We will be QRV for 24 hours from Saturday morning 0.00 a.m. GMT untill 12.00 p.m. GMT.
We would like to make a schedule of everyone willing to chat with us so that interested people can come on a specific moment to talk to scouts from a certain country.

This is what we propose:
Australia 9.30 a.m. GMT 28,950 MHz
Japan 9.45 21.350
S.-E.-Asia 14.30 21.350
Africa 14.45 28.950
Europe 15.00 7.075
N. and S. America 18.30 21.350

Any other appointment on whatever frequency and moment can be made using this newsgroup.
QSL-cards will be drawn on the same moments by our own scouts and sent afterwards.
You can also reach us to make an appointment via the packet-radio address, which is:
ON4ADF@ON1BWP#btn.bel.eu

We would like to be talking during the full 24 hours. Hope to chat with you then!

Ivo

404. CLARC Balloon Launch

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 19:02:40 UTC
From: biekert@phoenix.phoenix.net
Message-ID: <37460g$iqu@dolphin.phoenix.net>
Source record: 258841

Near Outer Space Transportation System (NOSTS-1)
Balloon Launch - Clear Lake Amateur Radio Club
Sunday - October 9, 1994

***** UPDATE ***** 10/7/94
Balloon launch scheduled for launch window from 10am to 12noon Sun 10/9
from Wharton Airport, Wharton Texas
****

Near Outer Space Transportation System utilizing a 12 foot diameter
helium balloon as the launch vehicle. NOSTS-1 is an amateur radio
experiment which will carry a various payloads in a package weighing
less than 6 pounds. All interested hams are invited to participate.

The payload consists of:

* 2 meter packet on 145.75 MHz simplex - the node name for digipeating is
NOSTS-1, the mailbox callsign is KJ5MX-6, the beacon IDs as KJ5MX-3.

* 10 meter voice beacon on 28.322 MHz Double Side-Band with an ID interval
of 33 seconds

* Beacon on 29.420 MHz sending "CW" beeps that correspond directly to the
outside temperature. At 70 degrees Fahrenheit the beep rate is
approximately 200/min. To calculate temperature from beep rate the
formula: Temp(degrees F) = [0.56853 X (Beep rate)] - 38
The antenna for this device is a 2 meter dipole cut to enhance the 5th
harmonic at 147.10 MHz for direction finding purposes.

* Beacon on 224.72 MHz for direction finding purposes only.

* Potential secondary payloads may include a 10 GHz gigaplexer beacon and
a 2 meter uplink (147.435 MHz), 70 cm downlink (440.95 MHz) FM repeater.
Final announcements on these payloads will be made on launch day.

The Clear Lake Amateur Radio Club Balloon Launch Team wishes to thank
Andy MacAllister, WA5ZIB and members of the South Texas Balloon Launch
Team for assistance, advice, and use of 220 MHz beacon, 29.420 MHz fireball
transmitter for this launch.

An informal simultaneous HF (7.155 Mhz or up for QRM) and UHF (442.750 SE
Houston | 444.275 MHz NW Houston repeaters) net will be held at 7PM on
Saturday October 8th for final updates. The 40 meter net on the same
frequency will be active immediately before and during the flight.

The lauch site will be west of the Houston area and the direction of
flight will be from west to east. Coverage may extend several states
on some modes. Reception reports including frequency, time, and

YOUR location are encouraged.

Source record: 258866

I have an EIMAC book that shows a 4PR60B/8252. It is Pulse modulator tube.

MAX RATINGS are: Plate Voltage: 20 KV, Screen Voltage: 1.5 KV, Peak plate current: 18 amps, Plate dissapation: 60 watts, Screen dissapation: 8 watts, Grid dissapation: 1 watt, Max seal temp: 200 degrees C.

Typical OPERATION: Plate Voltage: 20 KV, Screen Voltage: 1.25 KV, Pulse Plate Voltage: 18.75 KV, Pulse Plate current: 18 amps, Pulse Drive Power: 560 watts, Pulse Output Power: 337 KW, Duty Factor: 0.001. The picture sure looks husky and the size of the pins indicates that they don't want much resistance with the currents required.

The filament requires 26 volts at 1.95 to 2.35 amps. Input capacitance is 35 tp 50 pf., Output is 6 to 11 pf, and feedthrough capacitance is 2.0 pf.

Good Luck,
Harry, W3IIT

That's what I did as a kid, long ago, and the negative effects of that are biting me even today. I'm studying for my test next week, but I remember when I first got the ARRL tapes how taken aback I was at my difficulty in distinguishing dots and dashes. Somehow I expected the dash to sound "more different" than just the length of the tone! :-) Consequently, I had weird problems with "a" and "n", "y" and "q", and "l" and "f".

I notice that "Now You're Talking" doesn't have a table with the code in it; I think this is very wise.

>What I need to do is hear "dah-dah" directly as "emm" (M) phonetically

Exactly. Surprisingly, I find numbers, punctuation, and the prosigns easier than letters because they're longer and more melodic.

Forgiven. I didn't think you really meant to flame me quite that way.
And perhaps we are setting an example of courtesy by working thru
this without resorting to name-calling?

Setting a reduced-jargon example for the newbies is the 100% solution.

Anything more would be offensive. Anything less and you're one too :-))

I suppose that we also have a bit of elitism in our motives (I do) in
that certain kinds of jargon (a la CB) is more unwelcome than
some of our own equally meaningless jargon. God forbid that we should
be mistaken for CB'ers. There's no fervor like that of the recently saved....

Frankly, I don't listen to 2m anymore unless there is a tornado
chase going. The action on the police/fire bands is much more intense.
Maybe it's the mileage catching up with me but I've heard, and
participated in, enough ham contacts to have lost interest in casual
contacts. I'm grateful to those who monitor though in the rare times
when I need a 911 patch or some directions finding someplace in a
strange town. (I do keep an HT in the car and often in my backpack.)

: Scott - KG0MR (formerly N0VRF, but only doing this since early '93 :-)

It's never too late to start and you're never too young to go for Extra:-)
Thanks for the attitude check Scott. My beard was getting tangled in
my keyboard and interfering with clear, meaningful writing.

Now, you no-code Techs listening in here, be nice and one day Olde
Uncle Ron will tell you about how he discovered that he was not the
only ham aboard the submarine he was stationed on. And the other
ham wasn't a radioman either!

I was wondering if anyone has access to the FCC database for Georgia. I
am trying to locate which paging carrier in the Atlanta area is licensed
for 931.5625. I have a friend who is moving into the area, and he
would like to use his pager down there, and he is trying to locate
the company which operates on that frequency (if indeed there is one).
If anyone has access to this information, either through the FCC
database or other means, I would appreciate an e-mail.

Thanks in advance,
Steve

Catch is it's almost ALWAYS 50 Hz...and some of your stiff will NOT run on
50Hz current. Best case the transformers will be running 10% hotter...worst case,
they may burn up. Be careful! 50 Hz transformers are less efficient, and hence
BIGGER than those designed for 60Hz. This always puzzled me, why the europeans
were smart enough to pick 220vac but then settle for 50 Hz.....40 Hz in parts
of the Orient! Weird....

412. Illinois Qso Party

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 21:47:14 UTC
From: jimkd0av@aol.com
Message-ID: <374fl2$4pq@newsbf01.news.aol.com>
Source record: 258847

Illinois QSO is this weekend and is a shorty (only 8 hrs). Hope all can spend a little time tuning the bands and give us a few qso's.

Announcement:

ILLINOIS QSO PARTY
1800Z Sun, Oct 9 to 0200Z Mon, Oct 10
1:00 pm to 9:00 pm, CDT Sunday, Oct 10

Stations may be worked once per band and mode, and IL stations can contact other in-
state stations of QSO and multiplier credit.

Exchange: RS(T) and QTH. County for IL stations; state, province, or DX country for
others.

Scoring: One point for phone contacts, 2 points for CW. IL stations multiply total QSO
points by (state+provinces+IL counties+mximum of 5 countries) worked. Additional DX
QSO's count for points but not multiplier. Others use IL counties for multiplier
(maximum of 102) IL mobiles add 200 points to final score for each county from which
10 or more QSOs were made.

Frequencies: CW--3550, 7050, 14050 and 30 kHz above bottom edge of Novice

subbands for CW and 28390 for phone. SSB--3890, 7290, 14290. Other bands may also
be used.

Awards: Certificates will be sent to the top 10 scoring IL fixed stations, 5 IL mobiles,
winners in each state, province, county and the highest club/team aggregate score. A
plaque goes to the top-scoring Illinois station (fixed and mobile).

Logs: Indicate band and mode, circle each new multiplier, and IL mobiles must indicate
each county change. Stations with over 100 QSOs must submit a dupe sheet. A summary sheet showing the scoring and the usual signed declaration is also
required. Mailing deadline for logs is November 7th to: RAMS, 3820 N. Oleander,
Chicago, IL 60634. Enclose an SASE for contest results.

413. Re: "How far" does 1 milliwat (and 1 watt) go?

: frequencies w/ large Parabolics either).
: I'm specifically looking for "how far" on "how little power" under
: *relatively ideal conditions* for 1 milliwatt and 1 watt.

It's not a matter of how far will your signal go, but who can
receive it at what distance. Their Noise Figure plays a large part in
determining how small of a signal they can receive. If your signal is
10^-23 Watts and their noise at the input stage and first amp is roughly
the same, then they probably will only be able to get real crappy CW through,
if that. If your signal is say 10-20dB higher (I know that's two orders of
magnitude), then you can get a large data rate at a low Probability of
bit error.
So the question is, does the liquid helium to cool the front end
become more practical then the antenna array for QRP operations:-).

Yes I have somthing to say, It doesnt work the way it should, in theory it should work but the rest of the components are not designed to handle the load of the high powered final & and driver. The best thing you could ever do with that radio is send it to chipswitch or get the kit from them and install it yourself
if you feel like you can. Their number is 707-539-0512. There is also a place in NY that will install the chip and modify all kinds of things in that radio. I have one and it is the best thing you could ever imagine for that radio. If I could find another HR-2510 for sale I would buy it and have the mod done so I could have one for the mobile and one for the base.....

415. IPS Daily Report - 07 October 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-07 23:46:54 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Oct7.234654.29326@ips.oz.au>
Source record: 258862
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 OCTOBER AND FORECAST FOR 08 OCTOBER - 10 OCTOBER

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 06 Oct
Daily Proton Fluence >1 MeV: 1.6E+07
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 6.5E+08 (high)
X-ray background: A5.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Oct 09 Oct 10 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Oct: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 06 Oct
Learmonth 22 3432 5443
Fredericksburg 23 23
Planetary 23 32

Observed Kp for 06 Oct: 4555 4434
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Oct 16 Unsettled
09 Oct 14 Unsettled
10 Oct 10 Quiet to unsettled
COMMENT: Active periods possible during local night as coronal
hole induced activity declines.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Oct normal fair-normal poor-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Oct normal fair poor
09 Oct normal normal fair
10 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
07 Oct -30 about 30% below predicted monthly values

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
08 Oct 20 Near predicted monthly values
09 Oct 20 Near predicted monthly values
10 Oct 20 Near predicted monthly values
COMMENT: Ionospheric conditions appear to have recovered, at
both Sydney and Townsville. A general improvement in HF conditions
should be experienced today.

HR AMSAT ORBITAL ELEMENTS FOR WEATHER SATELLITES
FROM WA5QGD FORT WORTH,TX October 7, 1994
BID: $ORBS-280.W
TO ALL RADIO AMATEURS BT

Satellite: NOAA-9
Catalog number: 15427
Epoch time: 94280.07285109
Element set: 981
Inclination: 99.0382 deg
RA of node: 331.8016 deg
Eccentricity: 0.0014179
Arg of perigee: 264.4499 deg
Mean anomaly: 95.5060 deg
Mean motion: 14.13647422 rev/day
Decay rate: 4.7e-07 rev/day^2
Epoch rev: 50606
Checksum: 312

Satellite: NOAA-10
Catalog number: 16969
Epoch time: 94280.01837931
Element set: 882
Inclination: 98.5098 deg
RA of node: 285.6156 deg
Eccentricity: 0.0013771
Arg of perigee: 7.2432 deg
Mean anomaly: 352.8945 deg
Mean motion: 14.24907436 rev/day
Decay rate: 2.8e-07 rev/day^2
Epoch rev: 41842
Checksum: 330

Satellite: MET-2/17
Catalog number: 18820
Epoch time: 94280.16559409
Element set: 427
Inclination: 82.5443 deg
RA of node: 179.5150 deg
Eccentricity: 0.0015090
Arg of perigee: 225.5626 deg
Mean anomaly: 134.4304 deg
```

Mean motion: 13.84722814 rev/day
Decay rate: 6.1e-07 rev/day^2
Epoch rev: 33785
Checksum: 304

Satellite: MET-3/2
Catalog number: 19336
Epoch time: 94280.37364702
Element set: 339
Inclination: 82.5377 deg
RA of node: 244.2864 deg
Eccentricity: 0.0017353
Arg of perigee: 347.4174 deg
Mean anomaly: 12.6506 deg
Mean motion: 13.16969436 rev/day
Decay rate: 5.1e-07 rev/day^2
Epoch rev: 29802
Checksum: 314

Satellite: NOAA-11
Catalog number: 19531
Epoch time: 94279.95078024
Element set: 798
Inclination: 99.1813 deg
RA of node: 271.6559 deg
Eccentricity: 0.0011546
Arg of perigee: 175.6535 deg
Mean anomaly: 184.4743 deg
Mean motion: 14.13018598 rev/day
Decay rate: 1.3e-07 rev/day^2
Epoch rev: 31092
Checksum: 327

Satellite: MET-2/18
Catalog number: 19851
Epoch time: 94278.87625758
Element set: 340
Inclination: 82.5177 deg
RA of node: 55.6653 deg
Eccentricity: 0.0012800
Arg of perigee: 276.8640 deg
Mean anomaly: 83.1229 deg
Mean motion: 13.84372952 rev/day
Decay rate: 1.6e-07 rev/day^2
Epoch rev: 28300
Checksum: 324

Satellite: MET-3/3
Catalog number: 20305
Epoch time: 94280.21738469
Element set: 166

Inclination: 82.5540 deg
RA of node: 192.5175 deg

Wow, this goes back. I had an IC-215 in 1977 or so. You should be
able to find some QST ads that year. It was a very good performer, at
least on the receive side, though the rig was somewhat heavy and
bulky, plus it was crystal controlled which was a nuisance then and
probably even worse now. If I remember correctly it used 18mhz
crystals. It had 3 watts output plus a low power setting of 0.5 watts
or so if I remember correctly. If you have more questions, email me
and I'll see what I can remember.

Really though, you're probably best off looking for a synthesized HT.

Can anyone in the USA tell me who maintains your VHF/UHF/SHF and above
distance records ? I had a name and an address that is some years old
but a letter didn't get a reply so I assume I have the wrong information.

Any information would be gratefully appreciated.

:> On a similer vein... Cable TV in the UK uses
:> frequencies from 40Mhz to
:> 300Mhz. Under British law... If they are leaking onto our frequencies
:> from the pipe it is thier responsibility. If we interfere with them
:> (even TX on their fundimental) it is their
:> responsibility. Is that the
:> same in the US ?

EH(> : Legally, yes. In practical terms, just _try_ to get them to admit that
EH(> : it's their responsibility. Succeeding at that, just
EH(> _try_ to get them to
EH(> : do something about it before the neighbors pin your coax

I had a problem with bad cable leakage all over the 2 meter band. I wrote a letter to the FCC describing the interference, listing the frequencies, and inquiring as to whether or it not it might be from the local Cable TV company.

Well, about three weeks later, getting calls from the head technician of the cable company. He came out to house and spent nearly a week camped in my ham shack, using my 11 element beam to get a signal strength reading and bearingson the spurious signals. Then, he'd dispatch remote units to the general area to try to pin-point the leak.

They plugged a BUNCH of leaks, and the tech told me he found several ILLEGAL cable connections which were causing the leaks. Other things that apparently cause these RF leaks are old coax, rusty and loose cable connectors, the sort of things you might expect. On one major leak, apparently an electrical linesman had scaled a telephone poll, and his metal cleats had punctured the cable company's coax, which ran down the poll to a house. In another case, someone had hooked up his TV antenna incorrectly and it was radiating the cable signals.

Apparantly the technician had to reply to the FCC within a certain number of days and tell them what he had done to solve the problem. He also asked me to write a letter to the FCC telling them that the cable company had acted to solve the interference (which I did).

One simple letter to the FCC from a friendly ham sent a major cable company scrambling to clean up its act. (he he he.)

>actual character, yet sending goes like a snap.
```

Simple, Steven. You don't learn code by sending. You don't even need a key to learn code. Put it away. Handcuff yourself. The only way to learn good code is by LISTENING to good code. Get yourself into a rigorous schedule of copying W1AW.

Then, when you can copy 5-10 wpm well on paper or in your head, approach a key with deference, respect and humility and develop your own personality, signature and rhythm, which one hopes amounts to a "good fist".

It is very much like learning music or a foreign language. Just because you can READ music, doesn't mean you can PLAY it with meaning.

Just because you can make yourself understood in French, doesn't mean you can understand it when someone rattles off a long, fast, complicated phrase.

```
There is enormous joy to be experienced in CW. You will never regret it if you
learn it right and have others compliment you on your fist.

With good intent (no flames, please)

October 8, 1994

The VE3ONT group has just been informed that our planned Big Dish EME operation during the weekend of Oct. 30 has been preempted by a worldwide supernova observation experiment. Although we have always known that our amateur operation was vulnerable to the needs of "paying customers" we are nevertheless disappointed.

Please pass the word that there will be no VE3ONT EME operation during the first weekend of the A.R.R.L. EME contest. We anticipate access to the 46 meter (150') dish for the 2nd weekend as previously announced. As currently planned, the November operation will be on 144 MHz both days. However, please watch for further announcements in the event of schedule adjustments.

The entire VE3ONT group apologizes for this last-minute change of plans.

>Cushcraft R5 or R7, and the MFJ clone? Comments would be appreciated. TNX

I've used R5 at a friends. Good hardware, good antenna. Good performance.

I have an Isoloop and a loop I built before the isoloop was a twinkle in their eye. The loop is a very good antenna for the space consumed. Works fine. The only problem with the AEA and MFJ units are power handling. Much over 200 watts and they both vapor-lock. A 1-kw version would be real neat. My homebrew 40-20 loop will take a kw.

431. Advanced study guide & Used gear

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-08 15:54:42 UTC
From: pmm@safn2.saf.com
Message-ID: <748@safn8.UUCP>
Source record: 258877

I have been inactive for about 10 years while I was going to
college (BS EE), getting married, having kids, etc. I'm
interested in getting back into the hobby and my first goal is
to upgrade from a General class. I'm sure glad I remembered to
renew my ticket!

Last week I went to Radio Shack and bought "Gordon West's New
Advanced Class FCC License Preparation." It has a red
cover and is copyrighted 1992. Does anyone know if this is the
latest version of this book? The book is basically just the Advanced
question pool with terse explanations of the answers. Can anyone
recommend a better study guide for the Advance/Extra theory? (Being a
former HF CW DX'er, I don't anticipate the code being a problem.)
I bought "Now You're Talking" and I already knew most of that
stuff....good book, though.

I dug my old equipment out of the basement and I need a SWR meter,
a dummy load, and a keyer. RCVR and XMTR seem to be fine. I want
to keep my expenses low...two little kids, one income, no pocket money.
Can anyone recommend a swap mailing list or newsgroup where I can lurk
for this paraphernalia? I noticed in the ARRL FAQ that there is a
rec.radio.swap. Is it good for Ham gear? I currently get
rec.radio.amateur.misc and e-mail. Please respond by e-mail
unless you think everyone needs to see your response.
Thanks for your help!!

To be a signal it must signify something. Kerchunking is merely
a test transmission. Of course a particular repeater owner can
ban it from his or her machines, but enforcement might be a little
hard.

435. Icom 737 Erratic Display

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-08 17:41:23 UTC
From: IQC109@uriacc.uri.edu
Message-ID: <199410081745.KAA13611@ucsd.edu>
Source record: 258728

Question: What is the fix (permanent) for an erratic LCD display on the Icom 737 HF transceiver. I have not called the company yet, but I would like to check with other users first. The display does not increment properly when the tuning knob is turned. It will go up 10kc, 7kc, 50kc,etc. at a time...no pattern. The manual says that doing a reset (holding CLEAR and ENTER keys while powering up) should fix this. It has fixed it in the past (after more than one try) but no longer works. This is a nasty problem because even if the 'fix' works, you lose everything in memory! Any feedback? Please E-mail or post here (I'll bet others are interested). Thanks...Ken Carr....Coventry, R.I. ....KB1AV....IQC109@URIACC.URI

>are biting me even today.

Take heart. I learned it that way, and I can copy 35 wpm on a good
day, especially after some coffee. So maybe I could do 60 wpm had
I learned it the right way, but it's good enough for me.

Even now, I still think I see the symbols "written out" as I hear
them, but I guess I don't, because if I see words written out in Morse
code (e.g. in QST ads or people's signatures), I have to 'sound' the
symbols in order to translate them.

Enjoy!

Is there a way to program the Kenwood TH-78A to use digital squelch either in rx or tx? I'm trying to monitor my school's security frequency; but they use a digital squelch on their radios and while I can hear them ,I also hear a nearby delivery company that operates on the same frequency using pl-tones. Anyhow, I'm trying to separate the first from the second. Can someone please tell me if this possible. Please email any responses.

Thanks,

Marc Wollemborg (N2ZES)

>Really though, you're probably best off looking for a synthesized HT.

As Tek said, amateurs in Singapore are only given a couple of channels
at 2M. Synthesized rigs are *NOT* allowed in the hands of amateurs.
There is a list of approved radios that a ham can own - the government
inspects your station prior to granting you a license (American
spelling!) and if you have an unapproved radio you just might end up
in jail!

You have to submit character letters of reference to the government
prior to gaining a license. There's at least a dozen more severe
conditions that have to be met.

I have been waiting for someone to point this out.

It's called communicating, that what we do.

If what you are doing works, then use it. However, if you consistantly
confuse or piss people off, then stop doing it, you are not
communicating.

It is my responsibility to make sure that what I am saying on the
air can be understood the way that I mean it.

So there! :-)

As a matter of curiousity, do you happen to remember in which
direction the rhombic was pointed?

441. Florescent light wiring

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-08 21:57:35 UTC
From: Alex_J.B._Patrick@metro.mactel.org
Message-ID: <218300414.4528419@metr.metro.mactel.org>
Source record: 258744

Do you know anything about florescent tube lights, fuses and their ratings, please would you mind checking the enclosed circuit, of the mains wiring for a UV light box, I'm building. Some specific things I need verifying are:

1) Are the fuses in the correct place?
2) Are the fuse ratings, I've given them okay?
3) Should I use slow blow, fast blow or anti-surge fuses?
4) I am using two 12" florescent tubes, am I right to connect them in parallel?
5) I have a relay connected to a timer CCT., switching the mains to the florescent tubes, am I right to be switching both the live and the neutral mains lines.
6) Would there be any mains suppression CCT. needed?

If you can help drop me a line. Thanks ALEX.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 OCTOBER AND FORECAST FOR 09 OCTOBER - 11 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 07 Oct
Daily Proton Fluence >1 MeV: 2.8E+06
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 6.8E+08 (high)
X-ray background: A4.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Oct 10 Oct 11 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Oct: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 07 Oct
Learmonth 13 3333 2332
Fredericksburg 18 28
Planetary 18 27

Observed Kp for 07 Oct: 4454 5444
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Oct 14 Unsettled
10 Oct 10 Quiet to unsettled
11 Oct 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

08 Oct normal fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Oct normal normal fair
10 Oct normal normal fair
11 Oct normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
08 Oct 1 initially near normal then becoming depressed by 15%
until local dawn this morning

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Oct 20 Near predicted monthly values
10 Oct 20 Near predicted monthly values
11 Oct 20 Near predicted monthly values
COMMENT: Apparent ionospheric recovery was followed by further
depressions,(at both Sydney and Townsville) hence the low T value for
the 8th. Further depressions are not expected.

>: [emphasis added]

>To be a signal it must signify something.
^^^^^^ ^^^^^^^

A single kerchunk can `signify' the Morse letter E or T depending
upon the length of time one keys the PTT button; thus you must
identify.

Tell me, Grady - when I trace a `signal' using a `signal' tracer,
what is being `signified'?

>Kerchunking is merely a test transmission.

Tests can be conducted with a Watt meter and a dummy load.

Jeff NH6IL

Gee whiz, this is hard to understand. The rule refers to
unidentified communications or signals....

and you think that my holding down my transmit button on my HT is
neither? Then tune up, if done quickly, would need no identification?
I know the latter is not true, I suspect the first is just as untrue,
though I have never heard the FCC pop anyone for it.

This is not the interpretation I would make.

: > a licence before selling the handitalkie??

I'm an employee at radio shack and all they ever told me was,
1) Make *SURE* the customer knows he/she *HAS* to have a license to xmit.
2) Don't sell it if you have reason to think it will be used illegally.
ie, customer saying, ahh hell, I dont need no stinkin license..

I have pt the HTX-202 on display on one of the 'highlight tables' in the
front of the store, (very well secured), and left it on monitoring the
repeater. I also turned the transmit inhibit function on. The majority of
Hams wouldnt know how to turn that off, Unless they had previous experience
with the 202 or a manual.. So I felt it was pretty safe...

Keith Turner KE4QOL.

446. Need DX-302 specs...:(

Newsgroup: rec.radio.amateur.misc

Hi ppl.

MAYBE someone can help me. I just bought Realistic DX302 receiver (second hand)
and I haven't got the slightest idea what the specifications are.
Maybe someone came across one of them, sometime. Maybe. Probably :)

Thanx in advance.
Misel.

>loop will take a kw.

George:

How about sharing some details on your kw loop. I built
the loop shown in May, 1994 QST. What capacitor did you
use ? other details ?

Power handling is a definite problem. I had to use a
pretty large split stator cap to get to 100 watts.

Thanks.

Darren Leno (Darren.Leno@f747.n115.z1.nwugate.fidonet.org) wrote:

: I had a problem with bad cable leakage all over the 2 meter band.
: I wrote a letter to the FCC describing the interference, listing the
: frequencies, and inquiring as to whether or it not it might be from the
: local Cable TV company.

[snip]

: One simple letter to the FCC from a friendly ham sent a major cable company
: scrambling to clean up its act. (he he he.)

This is probably what I should have done when I was in Alamogordo, New Mexico. I called the cable company after driving all over town with my two meter handheld tuned to 145.52 and received signals all over town each time I passed a distribution point. All this with the antenna removed from the HT.

I got the "How do you know it exceeds... blah blah blah..." I told him to bring his spectrum analyzer out to my house and he'd see what I was talking about. It's where I started before I went all over town. "Okay, we'll be over on Monday." WRONG! Never came. I moved a few weeks later to a house about 3/4 of a mile up the street and never followed up after that. Wish I had. So much for 20/40 hindsight.

One comment on illegal splices...a good friend had all kinds of signals he was receiving in the 2 meter ham band...about two miles from where I first lived there. He sniffed out the problem and found someone had done the old twist the center conductors together and same with the shield up in the attic and taped it with electrician's tape. Yup, leaky, leaky. Solved his problem when he suggested to the guy that he get the correct tools and use connectors to splice the cable or he'd be hearing from the cable company.

Just me $.02 worth.

The following is a QST

More information comes to light on the penalty phase of the
California license fraud probe, the ARRL files on the upcoming
World Radio Communications Conferences and a famous sports figure
versus Marconi? All this and more on Newsline report number 895
coming your way right now!

(*****
CAL VE BUST

More information on the California license testing fraud case
comes light and more hams may soon face punishment.
As reported last week, three hams have had their licenses
suspended pending revocation. Fifty one others have been
downgraded in the wake of discoveries of alleged cheating in the
all-volunteer testing program.
This first wave of enforcement deals with exams conducted at
test sessions in the southern half of the state. These tests were
coordinated by the ARRL VEC. A subsequent investigation by the
commission in cooperation with several VEC's led the FCC to
declare that irregularities on exam papers indicated provable
fraud had been committed by as many as ninety candidates statewide
over a two year period.
Next up look for the grand finale with hard-line action
against the more serious offenders. This includes those with
multiple upgrades and most important, the Volunteer Examiners who
are alleged to have cooked up this licenses for sale scheme.
The FCC itself is limited as to what direct action it can take
against those it believes committed licensing fraud. The agency
can assess fines, it can issue show cause orders suspending or
revoking the licenses of those involved, or both. But most
important, it can also refer the matter to the Department of

Justice and request criminal prosecution against the most egregious offenders in the case.
Don't be surprised if more license revocations and downgrades are announced.

(*****
TECH TICKETS

If you hold a Technician class ham license issued prior to March 16, 1991 then you are automatically a Technician Plus licensee. The only problem is that the FCC's computer may not have taken note of this since June.
The FCC now admits that in some instances since last June the 8th, it has processed a license renewals and modification for some Technician Plus licensees and has mistakenly issued them entry level no-code Technician tickets.
Tech Plus licensees who sent in a renewal or modification after June 8th can immediately tell if they have an incorrect license simply by looking at it. If it was issued after that date it will be marked Technician Plus. If it isn't, then you are going to have to contact the FCC and get it corrected. Here's how.
You start by writing a letter to the FCC. Explain the situation. Include information on your current license status and its effective date. If you have your license at hand, make a photocopy and include it with your letter. Then mail everything to the FCC's license processing facility at 1270 Fairfield Road, Gettysburg, Pennsylvania 17325-7245. Or, if you have access to a facsimile machine you can fax the material to area code (717) 337-1541.
And then be patient. The commission says that it will take from four to six weeks to verify your claim and to have a corrected license mailed out.
But there is some good news with all this. The FCC says that you can continue to exercise your Technician Plus privileges until your corrected license arrives.

(*****
LEAGUE REPLIES TO WRC-95 PREPARATORY COMMENTS

The ARRL has commented on an FCC Notice of Inquiry in preparation for the next International Telecommunication Union World Radio Conference, scheduled for November 1995. In its filing on Docket 94-31, the ARRL urges that any consideration of realignment of the 7 MHz band be held in abeyance until the World Radiocommunications Conference scheduled for 2001. This, to give fixed and mobile services time to relocate to higher frequencies.
The ARRL had earlier suggested that the issue be considered in 1999 but has now moved that back two years.
In the matter of the 2300 MHz band, the League notes that the 1994 Omnibus Budget Reconciliation Act carries a rider that

protects amateurs. The league says this means that an international allocation for the Mobile Satellite Service at 2300 to 2310 or 2390 to 2420 MHz should not be considered.
Finally, the League again argues for a future agenda item in the form of an International Amateur Radio Permit. They say that such an automatic reciprocal permit is already available among the countries of the European Conference of Postal and Telecommunications Administrations and the International Amateur Radio Union has been promoting such an agreement among its members in ITU Region 2.

(*****
NEW ITU RADIOCOMMUNICATIONS DIRECTOR

The International Telecommunications Union, the ITU has elected Robert W. Jones, VE3CTM, to replace retiring Richard C. Kirby, W0LCT, as Director of its Radiocommunication Bureau. The announcement was made at the ITU Plenipotentiary Conference in Kyoto, Japan, on September 30th.
Jones is from of Ottawa and is currently the Director General of Canada's Radio Regulatory Branch which regulates amateur and other radio services. His work with the ITU began in 1975 in preparation for the 1977 and 1979 World Administrative Radio Conferences. From 1981 to 1983 he was director of a project to automate ITU frequency records. He has since served and headed Canadian delegations to numerous ITU conferences and working groups.
VE3CTM holds Master of Applied Science and Master of Business Administration degrees, and attributes his professional interest in radiocommunication to having become a licensed radio amateur as a teenager back in 1959.

(*****
MARCONI vs JORDAN

Two well known names you probably never expected to hear together are Guglielmo Marconi, recognized as the father of radio telegraphy and sports superstar Michael Jordan. Would you believe both men are in the middle of a dispute? It's true and it has to do with baseball.
If you ever wind up just a few blocks east of Birmingham's downtown business district, you may pass by a small city park named in honor of Guglielmo Marconi. Marconi Park is only about a block in size it contains a baseball field inner-city children and others use. The park was named after Marconi because he once visited Birmingham. Another visitor has been bringing plenty of notoriety to the city, and much more recently. Michael Jordan spent the summer here, playing minor league baseball with the Birmingham Barons. Now, the Barons want to name the park in honor of James Jordan, Michael Jordan's deceased father. The Barons promise to renovate the field if the new name is approved, but

the idea is striking out with community activists. They say Michael Jordan did not do enough work to help the community while he was playing baseball in Birmingham. The Barons say Jordan received so many requests to participate in various projects that granting them all was impossible. While Marconi spent time in Birmingham, name change opponents say James Jordan had no ties to the city at all. One community leader sez turning Marconi Park into James Jordan Park would mean nothing to the inner-city youth. As we go to air, the controversy over the park continues.

(*****
HPM CELEBRATION A SUCCESS

Definitely not controversial is word that the recent 10-day Hiram Percy Maxim 125th Birthday Memorial Celebration appears to have been an overwhelming success. Despite incredibly bad HF propagation the ARRL reports that pileups on /125 stations were heavy on both voice and CW. Perhaps most surprising was that few people asked what /125 meant.
The highest contact total reported so far is 5125. During a special operation the first weekend, a number of ARRL Headquarters staff members and visitors cranked out about 3,000 contacts from W1AW/125.

(*****
BOGUS BULLETINS

Remember our story last week about an election held at ARRL Headquarters where the staff voted down a union? Well the story was accurate, but it was also ten years old.
It seems that there is some prankster out there in radio land who is re-issuing decade old ARRL Official Bulletins with new dates and new bulletin ID's. And, whomever is providing this service is picking and choosing his topics very wisely. This to make it seem that the story is timely and apropos.
We have learned that these re-issued bulletins are showing up on packet radio, on private bulletin boards and even some of the major public data services. That's where we got bit. And once they enter the Internet they travel very quickly, worldwide.
The bottom line on this? If you come across an ARRL Official bulletin that you think you have read before, it not deja vous. You may have read it before, a decade ago.

(*****
SET - 94

Amateur Radio's 1994 Simulated Emergency Test, or SET is slated for next weekend, October 15 and 16. Set is an ARRL sponsored operating event designed to let hams practice emergency message handling under near to life field conditions. For more information or if you want to take part, please contact the ARRL Field Services department at league headquarters. Or you can call

your ARRL Director or local Section Manager. Their names can be found on page 8 of any issue of QST Magazine.

(*****
REPEATER WAIT

From across the Atlantic comes word that several new repeaters are coming on the air in the United Kingdom. That is, they will eventually be on the air.
The Radio Society of Great Britain reports that the latest batch of repeater applications have been forwarded to the United Kingdom's Radiocommunications Agency for processing. Included are three new Packet Radio repeaters, a 24 cm ATV repeater a two meter repeater and a change of frequency for another 24 cm ATV system.
That's the good part. Now heres the bad. The RSGB says that it anticipates the minimum time for clearance of the UHF repeaters will be at least six months or longer.
And you thought waiting for one of the United States volunteer frequency coordinators was bad. How lucky we are.

(*****
SHACK EXPANSION

Tandy Radio Shack is planning a substantial expansion of its retail outlets. According to Wall Street Business News reports, the company expects to open 500 new stores by the end of the century. That will give Radio Shack a total of seven-thousand franchised and company-owned stores. It's also planning to open 24 new Computer City outlets in 1995.
Not in the press release but widely rumored is a major expansion in Radio Shack's highly successful line of ham radio gear early next year.

(*****
DX

In DX, word that WD8E, will be in Taiwan the last part of October. As usual, this is a business trip and time for ham radio will be limited but he will sign BV/WD8E whenever time permits. QSL to his callbook address or via the bureau. All cards from his last two Taiwan operations have already been answered.

(*****
ARMY EVENT

Paul Wipperman, K1MTM, and a group of his friends in the North Atlantic Radio Club are currently operating a special events station near Boston to commemorate the work of the United States Army and the Signal Corps during World War 2. Whipperman says that some of the gear being used makes the operation unique.

"Much of the equipment that is here was used during World War II to protect the Atlantic coast line here. It is somewhat of a

unique station. We probably believe it is the only one of its type in North America. Paul Wipperman, K1MTM.

You can find K1MTM on all of the high frequency band with special emphasis for operating on 7255 KHz upper sideband on weekends. QSL this special commemorative operation with an SASE to K1MTM in care of the North Atlantic Radio Club at Post Office Box 81, Elmwood, Massachusetts, 02337.

Since you seem to know the 202 well, llet me ask you a question: I'm getting a erg an error 2 message, which is supposed to mean that something is wrong with the PLL.
Its still under 30 days. Should I exchange it or put it in for service? My inclinat[C[[C inclination is the former, but i don't want to over react. Thanks.

455. Re: Isoloop vs R5/7

>the loop shown in May, 1994 QST. What capacitor did you
>use ? other details ?
>
>Power handling is a definite problem. I had to use a
>pretty large split stator cap to get to 100 watts.

Dick-

I love talking about this antenna. It was just amazing! It is from the June '86
QST. I bought the W5QJR book (he authored the article) and also bought
the capacitor from him. It is a mongo air-spaced cap. Effective spacing is
1/2" for the plates and the capacity is 50-150 pf. I don't know if he is still making
this capoacitor. Mine fell over when I was moving and the ceramic ends smashed.
It was a good trooper. i glued it back together. Also, my stepping motor controller
chip went south. So the loop is currently not in service, but I did buy an isoloop.
Nice try, needs a bigger cap.

-George WB2DYB/5

458. Re: How Far With QRP?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-09 19:22:57 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <CxF76A.KFE@news.Hawaii.Edu>
Source record: 258760

My usual output power is around 730 mW - with this I regularly work countries in Asia and the South Pacific from here in Hawaii.

One of the greatest things with regard to QRP is the simplicity of the transmitters; I use the same design circuit for several bands - it calls for three 2N2222 transitors. If you've got a junked TV set or broadcast band radio then you've got enough parts to build an xmtr.

A nice high dipole, or longwire with good ground and homebrewed tuner, and you're all set to have the greatest of fun.

.73 from Warm and Sunny Hawaii,
Jeff NH6IL

459. Universal and Free List of Repeaters for Radio Amateurs

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-09 19:29:08 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Oct9152908@mipgsun.mipg.upenn.edu>

```
#
# Universal and Free Listing of Repeaters for Radio Amateurs
#
# ************************************************************************
#
# This version 0.11 (last updated 19941009) of an online repeater
# directory which currently contains circa 750 entries. For obvious
# reasons, all previous versions are obsolete. Version 0.03 is under
# copyright dispute and is no longer available. The current directory
# contains no known copyrighted data.
#
# This file with all the data will be available for anonymous ftp as
# mipgsun.mipg.upenn.edu:/pub/yee/rptr011.tar.Z The tar file contains
# a 10 meter repeater directory and some odds and ends that I have not
# had the time to incorporate into the main body of the database.
#
# As far as I am aware, all the data below is freely redistributable and
# my intent is to make sure it stays that way. For this reason, I have
# applied the General Public Virus.
#
# The repeater project will now include repeaters from ALL bands and
# is not limited to the US. This reflects the intent to make this
# directory universal.
#
# Contributions of data may be made by anonymous ftp to
# mipgsun.mipg.upenn.edu:/pub/yee/uploads or via email to
# yee@mipg.upenn.edu.
#
# The data format has not been changed from the old format so
# contributions that you were planning to make (prior to my recent
# troubles) are still current and most welcome. This repeater listing
# will of use iff people take an active part in making it accurate and
# useful. There are known problems with respect to duplicate entries
# but I do not currently have the time to deal with it. Sorry.
#
# In addition to the data below, I also have SERA data and ARCA data
# from the old database but I am unsure of whether I am allowed to
# include this in the revived database.
#
# If there are file format revisions after 0.3, I will worry about the
# file format conversion but I don't expect that there will be any need
# as all or nearly all important fields have already been defined and
# (hopefully) plenty of room has been left for expansion of the field
```

```
# definitions. I would like to add a field for linked repeater systems
# but lack the experience to determine how this is best done. I invite
# input. The new field will use some of the reserved fields so that the
# existing data will not become obsolete.
#
# I make absolutely no claims as to the accuracy of ANYTHING!! There
# are undoubtedly numerous errors all over the place. Some are
# typographical errors (the data has been typed in by hand). Other
# errors are due to outdated information. I do not have the ability to
# confirm entries. With volunteer assistance, any problems will soon
# be found and eliminated.
#
# Special thanks go to
# David Bourque (WB1FLD, David_Bourque@smtp.UB.com)

# ****************************************************************************
```

```
#
# The file format (version 0.4) shall be as follows. Consider this file
# format to be in the alpha stage and subject to frequent and arbitrary
# revisions. Each entry will be delineated by being on a different
# line. Each field of a repeater entry shall be delineated by colons.
# The text within a field shall not contain a colon. The field
# definitions are as follows:
#
# 0 latitude (deg,min,sec)
# Each component of the field shall be delineated by commas.
# 1 longitude (deg,min,sec)
# Each component of the field shall be delineated by commas.
# 2 elevation (meters)
# In backward countries such as the US, the English system is
# still dominant but the metric system is internationally used.
# 3 height above average terrain (meters)
# In backward countries such as the US, the English system is
# still dominant but the metric system isinternationally used.
# 4 spare location designation if grid squares are used for some
# repeaters while others have the above.
# 5-7 reserved for future use (e.g. ERP)
# 8 continent
# NA = North America
# EUR = Europe
# 9 country
# 10 major region designation (e.g. state, province)
# Use standard abbreviations if possible (e.g. NY, CA).
# 11 minor region designation (e.g. county, nearest major city)
# 12 immediate location (e.g. town, city, mountain)
# 13 output frequency of the repeater (MHz)
# 14 input frequency of the repeater (MHz or standard offset: + or -)
# The use of +,- may have to be deleted in the future if this
# repeater directory is extended to other countries that have
# differing standard offsets.
# 15 repeater call sign
# 16 misc. notes (for anything not covered in other fields)
# 17 sponsor (call sign or club name)
# 18 source of entry (call sign preferred)
# 19 date entry last updated (YYYYMMDD)
# Since data may only have a year of publication, the unknown
# parts shall have 00 (e.g. 19940000).
# 20 access information PL (Hertz),1750Hz access tone, DTMF
# If multiple for multiple inputs, delineate with commas.
# If no PL, enter 0.0
# 21 mode (e.g. F3E, A1A)
# 22 link information
# frequency(MHz),call;
# 23-27 reserved for future use (e.g. trustee)
#
# Any subsequent fields are free for users to define for their own use.
```

```

Summary: article contains a complete worldwide 10m FM repeater list
X-Newsreader: TIN [version 1.2 051093BETA PL3]

Attached you find a complete list of all 10m FM repeaters worldwide.
If you have additions and changes, please write to the author of the
list via packet radio (address see below) or to me via email.

Have fun ! Rainer relsch@hpbbm.bbn.hp.com
dl5saf@db0sao.#bw.deu.eu

The 10 meter-repeaterlist consists of 3 info-parts plus 14 main parts. It con-
tains news concerning the 10 meter-repeaterlist, month march 1994.
8 new 10m-repeater in Germany is planned: Backnang/Ludwigsburg (Locator:
JN49SB), Braunschweig (Locator: JO52GG), Bremen (Locator: JO43JF), Kiel (Loca-
tor: JO54__), Pirmasens (Locator: JN39TE), Scharbeutz (Locator: JO54JA), Pots-
dam (near Berlin) (Locator: JO62NJ) and Reutlingen/Kusterdingen (Locator:
JN48NM). In the next future, the 10m-repeater Regensburg, Konstanz and Traun-
stein will have a licence from the german BAPT. The 10m-repeater Hamburg DF0HHH
works from 6:00 o'clock in the morning to 1:00 o'clock in the night (utc). It's
a test from the new hamburg-repeater on 29.690 Mc. Tx-pwr is 50 watt on a 7/8-
lambda groundplane-antenna. The future the repeater DF0MHR and DF0MOT will have
a link via 70cm. 2 new 10m-repeater is planning in Andorra (C3) on a high
mountain, and in Lebanon in the City of Beirut. The Sponsor is Walid OD5ZZ.
I wish you many fun on 10 meter-repeaters. This list includes the 10m repeater
>from usa (update from the pocket-book: The arrl repeater directory 1992-1993
twenty-first edition). In the future i have the new The arrl repeater directory
1994-1995. I have order this new pocket-book by the arrl.
Please send corrections, news and updates to: DL6XB @ DB0HB.#HH.DEU.EU
73 de Bernhard from Hamburg...

EXPLANATION FOR THE 10M-REPEATERLIST WORLDWIDE (de ARRL, WIA and DL6XB)

The following is an explanation of the information included in each repeater listing:

Location:
=========
The city/town where the repeater is located. A pound sign (#) indicates the repeater is uncoordinated by the coordination council.

Output:
=======
The Output frequenzy in megahertz

Input:
======
The Input frequenzy in megahertz

Call:
=====
The call sign of the repeater

Notes:
======
How the repeater may be accessed and other specialized features are indicated by the following abbreviations:
ap.....Approval for the new 10m Repeater is finished
ap=BAPT.....The BAPT (The German Authority in charge) giving a Callsign for the new 10m Repeater
ap=DARC.....Application for the 10m Repeater is proposed at DARC (German Amateur Radio Club)
b.....Burst (Tonecall)
b=1750.....This repeater is on the air when the tonecall=1750 Hz has been sent
bcn.....Beacon
c.....Closed, private system
(Ch).....Shortwave-Channel in DL
cs.....The Call of this repeater must be imparted
CTCSS=3Z or
CTCSS:123.0 Hz.....This repeater sends a sub-audible tone with 123.0 Hz
CTCSS=3Z^ or This repeater is on the air by PTT, when it has received a 123.0 Hz-CTCSS-Tone
INFO.....Please send more Infos of this repeater to:
DL6XB @ DB0HB.#HH.DEU.EU
li.....Licensed, but not on the air
LOC:.....Locator
o.....Open (usally carrier-operated)
op.....Operating (Carrying on)
pl.....Planning/development stage
QTH?.....Location not known...?
RB.....Remote Base
t.....(new abbreviation) - Tone-access (CTCSS TONE) required to access.
tt.....Touch-Tone<TM> access to specialized repeater functions

Specialized features:
=====================
a.....................Autopatch
(ca)................Closed autopatch; may be used with authorization
e.....................Emergency power
l.....................Linked/Cross-band repeater
LINK0................Link between RX and TX via phoneline
LINK1-23.............Link (In this Example: On 23cm-Band)
p.....................Portable system
r.....................RACES affiliated
RX=..................RX-QTH in ....
Speech:..............Speechannouncement: ......(Text)......
(temp off air).......Temp off air
x.....................Wide area coverage
z.....................Direct access to law enforcement (usally 911)
*.....................This is currently understudy by ARRL

Sponsor:
========
The Sponsor of the repeater. A plus (+) sign indicates that the listed call
plus additional calls sponsor the repeater.

CTCSS (PL=Private Line) FREQUENCIES
==================================
The purpose of CTCSS (PL)<TM> is to reduce co-channel interference during band
openings. CTCSS (PL)<TM> equipped repeaters would respond only to signals ha-
ving the CTCSS tone required for that repeater. These repeaters would not res-
pond to weak distant signals on their inputs and correspondingly not transmit
and repeat to add to the congestion. The standard Electronic Industries Asso-
ciation (EIA) frequenzy cdes, in hertz, with their Motorola alphanumeric des-
signators, are as follows: (see the Call Area list!)
During 1980 the ARRL Board of Directors adopted the 10-meter CTCSS (PL)<TM>
tone-controlled squelch frequencies listed below for voluntary incorporation
into 10-meter repeater systems to provide a uniform national system.

Call Area Tone 1 Tone 2

W1 131.8 Hz-3B 91.5 Hz-ZZ
W2 136.5 Hz-4Z 94.8 Hz-ZA
W3 141.3 Hz-4A 97.4 Hz-ZB
W4 146.2 Hz-4B 100.0 Hz-1Z
W5 151.4 Hz-5Z 103.5 Hz-1A
W6 156.7 Hz-5A 107.2 Hz-1B
W7 162.2 Hz-5B 110.9 Hz-2Z
W8 167.9 Hz-6Z 114.8 Hz-2A
W9 173.8 Hz-6A 118.8 Hz-2B
W0 179.9 Hz-6B 123.0 Hz-3Z
VE 127.3 Hz-3A 88.5 Hz-YB

I wanted to make quite clear the the misc. junk that I posted onto rec.radio.amateur.misc is stuff that does belong to the database. I haven't had time to incorporate it.

Unfortunately, I will have net access only sporadically in the near future. As a result, I will not be able to answer email promptly. Sorry.

462. How far with QRP SSB....

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-09 20:15:13 UTC
From: white_hae@ccsua.ctstateu.edu
Message-ID: <1994Oct9.151513.1@ccsua.ctstateu.edu>
Source record: 258759

For QRP operation, I run a TenTec Argonaut 509, which puts out 5W CW or 2W SSB. For 20M ops, I use a 20M dipole or if mobile, a 20M hamstick. The power source is a 7 amp-hour gel-cell.

I really dig QRP SSB operation, and though it is very susceptible to QRM, SSB QSOs can be had quite easily. This summer I made 2-watt SSB contacts with OM3THR (Slovak Rep.) receiving a 56; ON6KZ (Belgium) 55; CT3GU (Madeira Is., Portugal) 43; and KL7AM in Kodiak, Alaska (51), among quite a few others. Stateside, I've worked WI, MI, FL, IL, SD, SC, ND, KY, TN, OR, AR, CO, UT, OH, GA, AL, NY and more....all since July 1.

QRP is an extraordinary operating experience. Throw the rig, a wire antenna, and a gel cell in a backpack and you have a worldwide-capable station that can be deployed in minutes from virtually anywhere. And now that I have the capability to recharge my gel-cells via a couple of small solar panels, extended, multiday operation is now possible from a remote site (or the far corner of the backyard :).

Anyway, I thought I would throw my $0.02 in....and if anyone is interested in QRP SSB skeds, drop me a note.

The CLARC Balloon was launched, we have received reports as far as Jackson Ms. If anyone heard this please email me with reception reports.
Looks like it made close to 100,000'! Sadly, just as it touched down we lost all beacons. So far no visual sightings...but for our first launch it was fantastic!!

Message-ID: <59021.ensmtp@monet.prs.k12.nj.us>
Source record: 258765

Just back from central PA where I dropped in to a RS store to run an informal survey: 1) asked the clerk what I needed to use the HTX-202 - "You'll need to get an amateur radio license to use it, not to buy it, but we can supply you with the books right here."
2) what else do you need? - "It's got a built-in antenna for local communications but you may want a mobile type antenna to make it go further."
3) how far will it go? - "Well that's up to the FCC. It's transmitting the maximum power allowed for hand held radios, so I guess it will go a couple of miles."
4) I see you have another one there that says "440" on it. What's the difference? - "That's another amateur radio band, but it's basically the same radio. Now, would you like to buy just the 2m version, or both?"

Oops, the jig is up...I confessed that I was a ham for a very long time and that he didn't screw up his answers too badly. I told him about range and simplex vs. repeaters and clarified the "maximum power" thing, and that I appreciated the fact that all his ham radios were displayed without antennas attached. That could certainly minimize illegal "Kerr-chunking."

We actually had a nice chat and he didn't seem too P.O.'ed by my little scam. I wasn't trying to embarrass him as I told him about the discussion raging here on the Internet. I said that the more informed he is about these things, the better, though he confessed that based on the numbers of these his store sells, it's hardly worth the time where he could become more knowledgeable about the computers, software and other stuff. Touche'

End of survey...

I don't have binhex, so I can't see your diagram, but I don't think
you can connect the bulbs in parallel. Loke neon bulbs, they try to
maintain a constant voltage across the terminals (one end of the
bulb to the other, that is) and one of the bulbs will be slightly
lower voltage than the other, and will take all the current, and
the other won't light. Ballasts are used as a current limiter
from the powerline (mains) to the bulb. Or else the bulb will try
to take the powerline voltage down, sucking huge currents, dissapate
lots of power, and blow up.

469. Who to complain to?

Man,
My first job after college was as an engineer at Lincoln Lab with the LASER Group! Lasers are easily "absorbed". They use a frequency of light that is easily absorbed with g.$a#*)(@@@@ , I don't want to get into trouble. Also LASER RADAR can be jammed just like Microwave RADAR! You transmit the calibration signal!

NOW AS FAR AS CANCER GOES.... TALK TO ANY SEASONED HAM! even 73cm is harmfull with handhelds! if 440Mhz causes cancer imagin what a flip phone does at 820Mhz!

Rhode Island and Conneticut State Police did a study and the cancer rate is alarming!

the circuitry used to drive the LASER DOPPLER RADAR is also hazardous though, the LASER is pulsed at @1Ghz!

I suggest you read up on bio physics!
all matter, including our cell structure is bipolar.
that's why gravity has an effect on our body

It's been found that if the magnetic field gets stimulated while our cells divide.... well the DNA code can get mangled the cell forms a mass.. it forgets to die after it split 50 times

Thats why children who live near high power lines or well...
you draw the conclusion... birth defects al that stuff

I don't know about you but I wouldn't want a 250Watt RADAR sitting on my lap

and yep that's how some cops used it for speed!

476. Cordless Phone listening to be illegal

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-10 04:17:05 UTC
From: billsohl@earth.planet.net
Message-ID: <37af81$avo@jupiter.planet.net>
Source record: 258776

The following was posted in the rec.radio.scanner newsgroup.
Something to keep in mind is that we now have radios/scanners/etc.
which have the entire CELLULAR frequencies chopped out to
eliminate listening to cellular. The concern can certainly
be voiced that legislation may follow this to have cordless
less frequencies also banned from future radio receivers.
Such a move would impact, for example, future full coverage
ham equipment such as (but obviously not limited to) the
Kenwood TS-690 (full receive from 500KHz to 60MHz).

Just a point of information at this time, but let's stay tuned
to what may be the next frequency segment(s) baned from
future equipment.

From: nx7u@aol.com
Message-ID: <37agdd$or6@newsbf01.news.aol.com>
Source record: 258779

Just to add to the thread:
When I first got my license (at 12) the only rig I could afford was the Heath HW-8. All of about 3W output (maybe) into a lousy vertical (I mean I didn't do a very good job of getting it to work).
In the course of three years I worked all states, about 110 countries, and lots of just plain interesting stuff. The best part was "breaking" a pileup for VR6 Pitcairn (can't recall the exact call used). And this was from Colorado; not DX Nirvana by any stretch!
Admittedly, I caught the peak of a sunspot cycle in this adventure. But I can't help but wonder how much better I could have done with some attention to the antenna.
In summary:
Decent antenna+operating skill=lots of fun (note independence of power level in equation)

Hi Chip.....stay away from that "Hustler" piece of crap. You would be
better off with a dummy load. If I were you, I would consider building
your own. Check out the new edition of "low Band DXing" by ON4UN. Any
ham equipment dealer or the ARRL has it. There are pages of info on
verticals in there.....you will learn a lot. A single band 40M vertical
is about as simple as you can get. Approx 32 feet of wire/aluminum tubing
and a REALLY GOOD GROUND SYSTEM should make it work like a champ.

Just remember, verticals are NOT limited space antennas.

: Microwave RADAR! You transmit the calibration signal!

It can be absorbed - at least most of it can - if you are willing to
paint the complete front end of your automobile with the proper substance.
Windshields will also, in many cases, return a sufficiently strong signal.

If they have a calibration signal. If they are using T and D radar, then
there is no such signal. Even if there was, the officer would know what
was happening, just as they know with current radar. Such jamming happens
to be highly illegal, for a number of reasons, and is likely to get you
into far more trouble than a simple speeding ticket.

: NOW AS FAR AS CANCER GOES.... TALK TO ANY SEASONED HAM! even 73cm is
: harmfull with handhelds! if 440Mhz causes cancer imagin what a flip
: phone does at 820Mhz!

All we have is rumor, and some very uncontrolled studies. I don't
know of any Hams who have quit using handhelds because of a reputed
cancer risk.

: Rhode Island and Conneticut State Police did a study and the cancer
: rate is alarming!

If I recall correctly, the studies were uncontrolled. However, I would
like to see followup studies with other police groups - done properly.
I would also like to see another study done on the RI and Conneticut
Police.

: the circuitry used to drive the LASER DOPPLER RADAR is also hazardous
: though, the LASER is pulsed at @1Ghz!

I understood that they were not using doppler radar - but T and D
radar - fully accurate enough, and much less expensive.

: I suggest you read up on bio physics!
: all matter, including our cell structure is bipolar.

What does this mean?

: that's why gravity has an effect on our body

: It's been found that if the magnetic field gets stimulated
: while our cells divide.... well the DNA code can get mangled
: the cell forms a mass.. it forgets to die after it split 50 times

What magnetic field? Is there a counter in each cell that tells it
how many times it divides? I understood was that the DNA caused it
to split frequently, instead of at the normal rate.

: Thats why children who live near high power lines or well...
: you draw the conclusion... birth defects al that stuff

The power line studies are in some dispute. For example, the energy
fields from your vacuum cleaner and electric blanket are stronger than
at normal distances of a house from power lines.

: I don't know about you but I wouldn't want a 250Watt RADAR sitting on my lap
:
: and yep that's how some cops used it for speed!

How did they do this? All the ones I have seen had the transmitter in the
head - which was aimed at the automobile. Kind of hard to do that if you
are holding it in your lap. The readout unit may have been held in their
laps, however - and they may have contained a high voltage power supply.

Bill

Here is a quicky analysis I just posted to Delphi tonite:
3397 10-OCT 03:42 General Information
RE: QSO's from aircraft (Re: Msg 3376)
From: JDOW To: BUMPKIN (NR)

Figure sensitivity of 0.3uV (-117dBm), transmitter of 5 watts (+37dBm), and
HT antennas (maybe -2dB or -3dB gains.) Path loss is 36.6dB + 20log(freq)
+20log(dx) with freq in MHz and dx in miles. Let's figure 2 meters for grins.
That is about 43dB for the frequency. So 43+37+20log(dx)+5 = 37-(-117) = 154dB.
85+20log(dx) = 154 -> 20log(dx) = 69dB. Or dx = 2800 miles. Of course that
assumes pure line of sight. And at 450MHz you drop to about 930 miles all other
things being equal.

Yeah - those little things can go a LONG ways when conditions are right.

Glen,
You might try the US Dept. of Justice/National Institute of Justice. Several
years ago, I obtained info from their Technology Assessment Program regarding
RF effects of transmitters in police vehicles.

You can obtain documents from:
National Criminal Justice Reference Service
Washington, DC 20531.

Hope this helps.

I think the portable cellular phones are only .6 Watts, right? The
true mobiles are 3 Watts. Not that it doesn't deserve consideration.

>All we have is rumor, and some very uncontrolled studies. I don't
>know of any Hams who have quit using handhelds because of a reputed
>cancer risk.

I agree with the "very uncontrolled studies" comment. I've often wondered
about the validity of ANY cancer studies on amateur radio operators.

What's our average age anyway? Older people usually DO have a higher
cancer rate compared to the average population.

I've also noticed a sedentary lifestyle for the majority of the amateur
population around here. Much easier to "sit in the shack" (say that three
times real fast ;-) doing DX year after year rather than keeping the old
cardiovascular system in shape. If we DO get out of the shack, it's for
coffee and donuts! ;-) There is field day of course. That once-a-year
exercise. While I've only been invloved for about 2-years now, I've
experienced the decrease in physical activity myself.

Not that there shouldn't be more studies. RF/EMF can be a very dangerous
thing.

>
>: I suggest you read up on bio physics!
>: all matter, including our cell structure is bipolar.
>
>What does this mean?

It means cells are affected by electric fields, same way a bar magnet will align with an external magnetic field. It's the principle behind electrophoresis. During cell division, while the nucleus is splitting, the cell is particularly vulnerable to electric fields. As far as I know, magnetic fields aren't implicated in this at all.

>: that's why gravity has an effect on our body

Of course this is nonsense.

>: It's been found that if the magnetic field gets stimulated
>: while our cells divide.... well the DNA code can get mangled

Apparently there *is* a form of counter in the cell. Cell death is programned in, otherwise we'd all live forever. What exactly that mechanism is, is still under intense research. We do know that cancer cells don't have it, and so proliferate indefinitely. Some cancer tissues have been kept alive in vitro for decades with no signs of aging.

>: I don't know about you but I wouldn't want a 250Watt RADAR sitting on my lap

Well, obviously, the handheld radar guns used by police are *not* 250 watts. They are in fact in the range of 10 *milliwatts* to 25 *milliwatts*. However, cops are in the habit of resting the guns in their laps when they

aren't actively clocking a vehicle, and they *don't turn them off* for the entire shift. So they get a good near field dose to the testicles. Testicular cancer rates are higher among police who do traffic patrol. Figure what the power density is right at the mouth of a 17 db standard horn and you'll see the levels they are getting are above ANSI limits. This is also why you should never look into the antenna of a microwave transmitter, no matter if it is very low power. The ERP can still be above safety limits at very close range.

Liquid Helium is only useful in the microwave spectrum. The background
noise temperature at 144 and lower frequencies is too high to derive any
significant benefit from cooling your preamp (room temperature designs can
exhibit 0.2 to 0.3 dB NF, if cost is not a factor). To obtain a low
system noise figure, not only must you have a low noise preamplifier, but
you must also have an antenna with a clean pattern that isn't pointed at
any warm objects (milky way, the sun, the ground....). The professionals
do this with huge horn antennas.

>IMHO there is nothing to compare to a well tuned CW operation in a
>contest. It is a ball!

I agree with all of these. There is NO substitute for on the air work. Take the novice and get on the air.

The comment about contesting is good too. I have noticed after working a couple of contests that my concentration and copy speed improves dramatically during a contest. The key here is the concentration. I know I couldn't hold a high speed QSO on CW right now, but once the exchange pattern is learned, it is fun.

I worked the PA QSO party this weekend. I started out by listening to a station send a few exchanges so I knew the call, QSO # and county. By the end of the contest I would jump right in after the first CQ. I rarely needed to ask for a repeat. Concentration made the difference.

And always push yourself. I have had a couple of contacts the last week that the station on the other end was sending just beyond my copy speed. I will tell them that and, if they don't mind a ragged QSO ask them to continue -- to push me. A good operator will recognize that it will make you a better one too!

73 es Good Luck!

492. Report: Hosstraders Tailgate & Swapfest @Rochester NH

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-10 14:22:01 UTC
From: mc@shore.net
Message-ID: <37bim9$chj@shore.shore.net>
Source record: 258792
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

For those who were unable to attend the Hosstraders Flea Market and Tailgate Fest here's what you missed.

We arrived at the Rochester NH Fairgrounds just after 9 AM on Friday October 7th. Our ham club, the Billerica Amateur Radio Society (B.A.R.S.) storms the gates en masse to stake out a big chunk of ground for setting up to sell stuff and partying. We had two motor homes and several cars so we were able to reserve a good area for later. I began cruising the flea market and immediately picked up a nice radio that needs a bit of work (not a true boat anchor, but it's respectable enough - a TenTec Century 21 CW xcvr). I spotted a Johnson Thunderbolt asking price $500 in very clean shape, but I observed severe pitting on the chassis and figured that it must have been stored down in someone's basement for many years. There were not as many boat anchors as in past years, but there were enough to keep everybody happy. Our club regards Hosstraders (also known as Deerfield) as a big club event including our now-famous pot luck supper which was great as usual. The evening was spent partying and cruising the grounds and we went to sleep in out tents or motor homes after 2AM.

Up at the crack of dawn, there were many new bargains to be found. A guy showed up with a pile of military surplus (but new-looking) TenTec hf receivers that went in a matter of minutes for $225.00. I guess we'll be seeing them around for a while at somewhat higher prices.

By 9AM the place was in full swing. I noticed that attendance was down in comparison with May, but later they announced that there were over 5000 tickets sold. I sold a lot of stuff and we all came home happy. I saw many prominent AMers around, including Tim WA1HLR, Bill K1KV and Thomas K1JJ. We drove back to Massachusetts via Concord NH (so my wife could have a run through the L.L. Bean outlet store that was also having a sale) and ran onto Tim and the gang on a local repeater and joined them for dinner in Concord before drivin back to MA.

The weather was absolutely perfect for both days. Couldn't have been any better! It was just great and I highly recommend The Hosstraders to anyone who wants to find some good stuff. Next Hosstraders will be on Friday, May 12th and Saturday May 13th at the same location.

See you there?

73,

Michael Crestohl KH6KD/W1

ARLB079 Congress resolution passes

ZCZC AG44
QST de W1AW
ARRL Bulletin 79 ARLB079
From ARRL Headquarters
Newington CT October 10, 1994
To all radio amateurs

SB QST ARL ARLB079
ARLB079 Congress resolution passes

The League's joint resolution supporting Amateur Radio passed both houses of Congress in the wee hours of the morning of October 7.

In a last ditch effort by Senators Charles Robb (D-VA), Wendell Ford (D-KY) and Alan Simpson (R-WY), Senate Joint Resolution 90 passed on the floor of the Senate under unanimous consent at 12:10 AM. The bill asks for ''reasonable accommodation'' in the operation of Amateur Radio in homes, automobiles and public places.

The bill then went to the House, where it was brought up by Congressman Al Swift (D-WA) and passed unanimously at 2:45 AM. Patricia Spurlock, a staffer for Robb, and Stephanie Vance, a staffer for Congressman Mike Kreidler (D-WA), worked overtime on the bill. Kreidler introduced the original House version.

Passage was assisted by the efforts of David Leach, counsel to the House Energy Commerce Committee, and Jerry Waldron and Colin Crowell of the House Telecommunication and Finance Subcommittee.
For more information, see September QST, page 93.

496. General Electric - Phoenix??

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-10 17:53:15 UTC
From: camter28@astro.ocis.temple.edu
Message-ID: <37bv2b$7ap@cronkite.ocis.temple.edu>
Source record: 258812

I have this General Electric 2 channel uhf radio
that has one problem. It transmits flawlessly, but
I bought it under the condition, and knowing fully well
that it didnt recieve. Now, I'm just trying to get the
recieve to work properly, and I looked inside, and
found one zener diode split in half, so I replaced it
and it didn't do anything.
I don't think the audio amp is bad,, but it could
be because when a signal comes through or I take
the squelch off, all I hear is a Phht. The little
busy light comes on at the right times, when it is
actually recieveing the signal. I have tried replacing
the speaker, using a different speaker, cleaning the volume
knob, twisting the knob, cleaning the contacts of the switches
etcetcetc..
Has anyone ever had this problem?
Oh, and one more thing, the guy I bought it off, he said
that for a little while there, the recieve would work
fine if it was cool, but once it was on for a little while,
it stopped putting out sound.

Thanks for any replies. How about guesses??
Any help would be much appreciated.

: MAKE SURE YOU USE CAUTION WHEN YOU USE THE RADAR GUN!! THEY CAUSE CANCER!
: That's why Laser RADAR is now used!

THAT'S NOT QUITE TRUE!! :-) If you drive around in a car 10-12 hours
a day for 10 years with a radar gun in your lap, you'll definitely
hard boil the ol' familial eggs. That's just natural selection at work.
I'll brush off the fact that there is no such thing as "Laser RADAR",
and comment that LIDAR accounts for only a small percentage of the
tax-collector's arsenal. It's cumbersome, expensive, may pose health
threats of its own (ie, shining coherent infrared laser light into the
eyes of millions of motorists year after year could be dangerous as
well - although not to Officer Friendly).

500. Callsign/address databases-privacy issue

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-10 20:06:39 UTC
From: wdh@Eng.Sun.COM
Message-ID: <37c6sf$nvv@engnews1.Eng.Sun.COM>
Source record: 258800

I'm concerned with having my name and address available publically
via call books and the like. I am very unconfortable having
folks know I am not home (from overhearing my conversations) and
being able to get my address from a public database.

I notice on the 610 form that public access is granted to information
on the form. Is there a way to prevent the distribution?

I hear a lot of folks on the local repeaters telling folks they
are going on vacation. Acces to callsign/address information can
lead to one's house getting broken into. I strongly suspect this
in a recent burglary.

Is there another route to privacy besides getting a PO box?

>you can work DX, you can ragchew, and you certainly can work contests.
>Listen to Sweepstakes and hear how many ops run QRP both weekends (and how
>good they sound!)
>

Friend of mine (Rob, WA3ULH) is a QRP fanatic. He made a CW contact from
North Carolina to South Africa on 20m with his 3-element beam --
and 20 milliwatts. He had an article about it (and QRP DXing in general) in
the September '93 issue of Radio Fun. He said solar flux was 160 that day;
he and the South African operator are going to try 1mw the next time the solar
flux hits 300 (which could be a few years ;-) .

Me, gimme a hundred watts and I'm usually happy.

From: adenaf@utica.ge.com
Message-ID: <CxH7rI.I24@crdnns.crd.ge.com>
Source record: 258803

There seems to be a lot of confusion about using FM on HF. A quick survey found that all asked thought 10 meters was the only legal band for amateur HF FM in the United States.
If you can transmit voice in a certain portion of a band, FM is also legal. FCC part 97.305 lists legal modes.
While I have never heard any FM on 160-12m, I would like to see some of those rigs with the capability used on FM. It may not be the most efficient mode but since there is no amplitude variation, you wont have to worry about the neighbor with a poorly designed TV seeing anything more than a constant carrier.

It depends which version of the phrase 'digital squelch' your school uses. Dollars to doughnuts- they use a variation of Moto's DPL, or DCS, or GE calls it DCG (all the same stuff). This is like PL, in that a subaudible code is sent constantly- but instead of one constant sine wave- DPL pulses out a code- akin to very, very, very old pagers (not a conincidence).

For some reason, the amateurs, as well as the companies selling us radios, market DTMF squelch systems as 'digital squelch'. Well--- yea, sorta. These are audible- usually consist of 3-4 MaBell-esqu tones in sequence. Less data permutations than DCS, slower (probably .75 secs for a 4 digit code, using my experience with ham HTs versus 0.179 ms [or so says Comm Spec] for true digital), and audible to others monitoring.

I've seen DTMF units in the commercial radio mags, but not many... so probably not used much. If you want to use your TH78 in this application- you'll need to spend $59 for a Comm-Spec board- and then figure a way to fit it in the radio (really small surface mount-chip board, but might not fit in your radio).

Good luck.

>{^_^} Joanne Dow, Editor Amiga Exchange, BIX
> jdow@bix.com

Well, let's do this for the generic case. Assume 50 ohm signal source
and 290K temperature. The 1 Hz noise power is -174 dBm due to Johnson
or thermal noise. The above path loss formula is correct. You can
figure out your own Tx and Rx antenna gains and Tx line losses. The
recevier sensitivity is then:

-174 dBm + 10 log (BW) + C/I + F

where BW is bandwidth of the receiver (noise BW) in hertz,
C/I is the required Carrier to Interference ratio needed, and
F is the receiver noise figure (the TOTAL receiver, not just the LNA).

C/I can be around 0 dB for OOK (CW) signals, 1 to 2 dB for wideband FM,
3 to 4 dB for NBFM, and as high as 10-12 dB for AM. Note that you get
audio SNR to C/I gain with FM and none with AM.

F is typically in the range of 5 to 10 dB. A good communications receiver
has a F of about 6 dB, with most commercial stuff around 8 dB. Your HT
and cellphone are probably around 7 to 8 dB.

So, if your received power (Tx power + Tx AG + Rx AG - Path Loss - TxLine
losses on both sides) is greater than your sensitivity, you get a QSO.
Consult a communications textbook for exact formulae required for C/I
for various systems.

This public database is a great aid in exchaning QSL cards, sending mail about upcoming events (e.g. hamfests), and sending advertisements about items in which you may actually be interested. Even without this readily available source of information, I would question the wisdom of announcing over the air one's intentions to be away from one's home.

>I notice on the 610 form that public access is granted to information
>on the form. Is there a way to prevent the distribution?

Not in the USA. Some countries allow you to decide (Canada???).

>I hear a lot of folks on the local repeaters telling folks they
>are going on vacation. Acces to callsign/address information can
>lead to one's house getting broken into. I strongly suspect this

Telling folks on the repeater that you are going on vacation is an invitation to burglary - even without the database.

>Is there another route to privacy besides getting a PO box?

Probably the best way if you're that concerned. Personally, I would refrain from announcing my intentions to be away from home, and then not worry about it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 OCTOBER AND FORECAST FOR 11 OCTOBER - 13 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 87/30

GOES satellite data for 09 Oct
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 2.0E+09 (very high)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Oct 12 Oct 13 Oct
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Oct: 86/29

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: ???

Estimated Indices : A K Observed A Index 09 Oct
Learmonth 13 2233 3432
Fredericksburg 10 11
Planetary 12 12

Observed Kp for 09 Oct: 3333 2232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Oct 5 Quiet to unsettled
12 Oct 5 Quiet to unsettled
13 Oct 16 Unsettled
COMMENT: Active periods possible during local night on 13th due to
small coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Oct normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Oct normal fair fair
12 Oct normal normal normal
13 Oct normal fair fair-poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
10 Oct 16 near normal until just after dawn this morning when
depressions of 10-25% were observed

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
11 Oct 5 Depressed 15 to 30%/near predicted monthly values
12 Oct 20 Near predicted monthly values
13 Oct 20 Near predicted monthly values
COMMENT: Ionosphere became depressed after dawn this morning.
(Depressions of 15% were observed at Townsville after 22UT.) The cause
of this depression is not clear. Current depression is expected
to continue for most of today, and appears to be less severe
at lower latitudes.

There is a code practice session on Wednesday nights at 8:00 PM
on the repeater using 145.45 as the output. There are several
5 minute sessions with the faster speeds first and the 5 wpm
session last.

I've heard that there might be code practice on another repeater also
on Wednesday nights. The frequency is 145.23 and time is uncertain,
maybe at 7:30 PM.

AMERICAN RADIO RELAY LEAGUE, INCORPORATED
AND
LAMBDA AMATEUR RADIO CLUB

JOINT DISTRIBUTION STATEMENT

October 10, 1994

FOR IMMEDIATE RELEASE

Contact: Jim Kelly, KK3K
(215) 978 - LARC

The American Radio Relay League (ARRL) and the Lambda Amateur Radio Club (LARC) are pleased to announce a cooperative resolution of LARC's discrimination complaint filed before the State of Connecticut Commission on Human Rights and Opportunities (CCHRO) in March 1992.

In September of 1985, LARC submitted a classified advertisement for publication in the "Club/Hamfests" section of QST which read:

"Lambda Net" club for gay hams with members nationwide and Canada. On-air skeds and newsletter. For info write Jim, KK3K, POB 24810 Phila. PA 19130

The advertisement was published in the November, 1985 issue of QST, but was refused in subsequent issues thereafter. LARC resubmitted the advertisement in 1987, 1989, and 1991; QST refused it each time. LARC's complaint asserted that the sexual orientation of LARC's members was the reason for the refusal to publish the advertisement and that QST's refusal to publish the advertisement constituted discrimination based on sexual orientation. ARRL disputes the allegations in the complaint.

In October of 1991, a Connecticut law prohibiting discrimination based on sexual orientation took effect. Connecticut General Statutes S. 46a-81d states: ". . . It shall be a discriminatory practice in violation of this section: (1) To deny any person within the jurisdiction of this state full and equal accommodations in any place of public accommodation . . . because of such person's sexual orientation." ARRL disputes the application of Connecticut General Statutes S. 46a-81d to its monthly journal, QST, and it

disputes the jurisdiction of the CCHRO over the rights of the publisher under the First Amendment to the United States Constitution.

In March 1992, ARRL offered to publish LARC's advertisement. However, LARC did not resubmit the advertisement, because it wanted assurance that the advertisement would not be removed from QST again. LARC chose instead to pursue its discrimination complaint.

In February 1994, the CCHRO found "reasonable cause for believing that a discriminatory practice had been . . . committed," and scheduled the case for a hearing. The hearing has not been held, and no evidence has been introduced, nor has any finding of fact or conclusion of law been made. Instead, ARRL and LARC met and reached a mutually acceptable solution to LARC's discrimination complaint. LARC and ARRL are pleased to report that the matter is now settled.

The ARRL and LARC are pleased to have resolved this situation in a spirit of good will and mutual respect which will allow each organization to cooperate as they concentrate their efforts on the many challenges confronting ham radio today.

This is just a plain dumb practice! One should NEVER talk about their
vacation BEFORE then go on it to other people over the air. Yes, this
practice has been used to determine whether someone will be home or not
and just where they live.

Talk about your vacation AFTER you get back...

From: griff@ssd.intel.com
Message-ID: <CxHH27.sB@SSD.intel.com>
Source record: 258805

Anyone have any experience with wireless security systems and amateur radio?

Currently I am up on the VHF/UHF bands, but plan to get on HF as soon as I get the code down and upgrade. I've considered installing a wired security system (using shielded pair), but due to the construction of our existing house this costs more than I care to spend. So, I am looking at wireless systems.

If you have a wireless security system, I would be very interested in knowing the following:

Which brand of security system?

Which amateur radio bands do you operate on, how much power, and type(s) of antennas?

What problems, if any, do your radio operations cause with the security system?

Were you able to fix these problems (how)?

Anything else that would be good to know?

Also, does anyone have any experience with security systems such as the "Plug 'n Power" from Radio Shack? Does it work, is it junk, any problems, etc?

I'll be happy to summarize the responses if there is sufficient demand.

Thanks much in advance.

My college radio station is looking to exchange radio programs (1 hour) over the internet with other colleges using Maven. We have a Mac on an ethernet network connected to our broadcasting board. We have tried sending an on-air broadcast to different Macintoshes around campus and it seems to work pretty well.

Basically, all you need is a line-level signal from your broadcast booth into a Macintosh on a network capable of accessing the internet. The Maven software is shareware.

It does take up quite a bit of band-width, so the broadcasts will have to be late at night. Right now I am interested in running a few short tests to study sound quality. Is anyone interested?

Please contact me via e-mail at peterson@lclark.edu.

Thanks,
Leland Peterson,
Music Director,
KLC Radio

PS Credit for this idea goes to a guy named Paul that works at the station.

For one, don't talk about it on the air. I know that sounds, well, simplistic, but as a soceity we haven't become aware enough about today's communications vulnerabilities. This applies not just to Amateur Radio, but cordless phones and cellular phones too. Old assumptions, new technology, big risks.

Greg.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 OCTOBER AND FORECAST FOR 11 OCTOBER - 13 OCTOBER
+++++ corrected copy +++++

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 87/30

GOES satellite data for 09 Oct
Daily Proton Fluence >1 MeV: 1.4E+06
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 2.0E+09 (very high)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Oct 12 Oct 13 Oct
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Oct: 86/29

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled

Estimated Indices : A K Observed A Index 09 Oct
Learmonth 13 2233 3432
Fredericksburg 10 11
Planetary 12 12

Observed Kp for 09 Oct: 3333 2232
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Oct 5 Quiet to unsettled
12 Oct 5 Quiet to unsettled
13 Oct 16 Unsettled
COMMENT: Active periods possible during local night on 13th due to
small coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Oct normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Oct normal fair fair
12 Oct normal normal normal
13 Oct normal fair fair-poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
10 Oct 16 near normal until just after dawn this morning when
depressions of 10-25% were observed

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
11 Oct 5 Depressed 15 to 30%/near predicted monthly values
12 Oct 20 Near predicted monthly values
13 Oct 20 Near predicted monthly values
COMMENT: Ionosphere became depressed after dawn this morning.
(Depressions of 15% were observed at Townsville after 22UT.) The cause
of this depression is not clear. Current depression is expected
to continue for most of today, and appears to be less severe
at lower latitudes.

Does any amateur group convert Internet email msg files to (CW? RTTY? etc) transmissions ? I'm an inactive ham with no rig and my OM is active on low freq SSB with no Internet access.

Maybe such a conversion would amount to illegal rebroadcast , but that's the kind of "modem" I seek.

Ken makes a good point below. Other security risks are cordless phones and baby monitors. Fortunately, newer cordless phones are starting to scramble their signal. 49 mhz is VERY easy to listen to. Unfortunately, the common sense thing is to consider yourself broadcasting (meanies are listening) and reserve the comments about vacation for the corded land-line.

Good luck,
Charles

In article <37c6sf$nvv@engnews1.Eng.Sun.COM>, wdh@Eng.Sun.COM (Dennis Henderson) writes:
This is just a plain dumb practice! One should NEVER talk about their vacation BEFORE then go on it to other people over the air. Yes, this practice has been used to determine whether someone will be home or not and just where they live.

Talk about your vacation AFTER you get back...

Ken

I have noticed that here, in Houston, variable tuning capacitors of any size larger than trimmers are nearly impossible to find..

However, I did find some large ceramic end, dual stage, common rotor, tuning capacitors at Ace Electronics, I think they were 50 - 100 pF per stage. They are made by Eddystone, 2.25 x 2.25 x 2.75 inches with two stator plates and three rotor plates in each section. The stator plates are .25 inches apart giving a physical plate spacing of .125 inches. They are also silver plated, definite military type. I paid only $2.95 for each and they told me they had a pallette full in back.

Ace Electronics can be reached at 713-688-8114, fax 713-688-7167...

: >
: >What does this mean?
:
: It means cells are affected by electric fields, same way a bar magnet
: will align with an external magnetic field. It's the principle behind
: electrophoresis. During cell division, while the nucleus is splitting,
: the cell is particularly vulnerable to electric fields. As far as I
: know, magnetic fields aren't implicated in this at all.

Note that the person said "all matter". That is why I was wondering about
the usage of the term.

: >How did they do this? All the ones I have seen had the transmitter in the
: >head - which was aimed at the automobile. Kind of hard to do that if you
: >are holding it in your lap. The readout unit may have been held in their
: >laps, however - and they may have contained a high voltage power supply.
:
: Well, obviously, the handheld radar guns used by police are *not* 250 watts.
: They are in fact in the range of 10 *milliwatts* to 25 *milliwatts*.

Correct.

: However, cops are in the habit of resting the guns in their laps when they
: aren't actively clocking a vehicle, and they *don't turn them off* for the
: entire shift. So they get a good near field dose to the testicles. Testicular
: cancer rates are higher among police who do traffic patrol. Figure what the
: power density is right at the mouth of a 17 db standard horn and you'll see
: the levels they are getting are above ANSI limits. This is also why you should
: never look into the antenna of a microwave transmitter, no matter if it is
: very low power. The ERP can still be above safety limits at very close range.

All the units I have seen have a trigger on them - so called "instant on"
units. There might be a high EM field, but no microwaves. Are the cops so
stupid that they would rest the mouth of an active radar unit on their
testicles? Highly unlikely.

Even if this were not true, I would expect the reflected waves to be much
higher than any leakage signal through the casing. Add in standing waves,

and you could get quite a few local hotspots - that would change position every time the unit moved a fraction of an inch.

Maybe the get the cancer from the sugar in their doughnuts.

Bill

I'm not trying to start anything, simply looking for clarification. Why would it be illegal to transmit infrared laser? I wasn't aware there were any regulations on transmitting light of any frequency/pulse duration or coherency. Am I simply misinformed? Or are there other laws in effect here?

I'll sit back and listen now...

Actually, most of the officers that get this form of cancer are motorcycle
officers since they must rest their gun near this part of their body
when chasing a car.
Also the officers in autos may incidentally rest the gun there if they
throw it down in a hurry to chase a "speeder".
It's not done by choice, that's guaranteed...

>From the Motorola digital cell phone manual:

>>TDMA digital technology is more secure than analog technology,
>>making it less susceptible to interception by third parties with
>>scanners or other listening devices (NO! :-).

NO?

TDMA multiplexes THREE conversations into the same bandwidth used by
a SINGLE conversation in the conventional NAMPS analog system. The
data is also digitally compressed. Most individuals (including MOST
radio amateurs) would not have the ability to intercept and decode
these transmissions.

It remains to be seen if cellular phone manufacturers will continue to
have a software test mode option (available from the phone's keypad)
that will allow the phone to "scan", receive and decode any cellular
"channel".

Still, you are correct that a "simple" modulation technique (even
spread spectrum) is NOT a form of security. Cryptography is the
solution. If security IS an issue, the data should be encrypted
prior to transmission, regardless of the modulation technique employed.
While the casual listener may not have the initiative or resources
to intercept digital cellular, a sufficently motivated organization or
individual will (and can) do so, if they really want your "data".

> For even more
>>security, the Voice Privacy feature scrambles a digital
>>conversation as it passes over the air. The Voice Privacy
>>feature will request a secure voice channel in all call cases...

There are analog scramblers (employing techniques far more
sophisticated than speech inversion) available (from companies
such as Transcrpyt and MX-COM) for both analog cellular phones and
VHF/UHF business and public-service band 2-way radios.

If you're really interested in cellular and can afford to spend about
$100.00 on a good book, try "Cellular Radio: Analog and Digital
Systems" by Asha Mehrota. It is an EXCELLENT book on the PRACTICAL
implementation of these technologies (rather than a theorectical,
PhD-level discussion of spread-spectrum and other digital techniques).

533. WANTED: Information on ELDICO SSB radio station, circa 1960s!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 10:35:21 UTC
From: mc@shore.net
Message-ID: <37dpp9$rc9@shore.shore.net>
Source record: 258818
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.collecting

More goodies from the weekend hamfest flea market haul.....

I picked up an ELDICO HF SSB station consisting of:
Receiver model R-104
Transmitter (label eradicated) model unknown but guess it would be T-104
Power Supply model P109
Control Unit M-135

All are part of S-119 SSB Communications System.

I remember seeing ads for these in QSTs from the early 1960s. They bear a very strong resemblance to the Collins S-line. They appear to be very well constructed. I particularly like the PA cage which has a very nice roller inductor tuning system which is more like a KWM-1 than a 32Sx receiver. I have always wanted to pick one of these stations up and now that I have one the next step will to be to get it on the air. The radios are cosmetically very nice, although they are dusty from long-term storage.

Unfortunately, one of the previous owners decided to strip out the crystals (including the 100 Kc calibrator xtal!) the receiver plug-in mechanical filter and some of the tubes. Also not included were the connecting cables (not really a problem) and, of course, the manual & schematic.

Does anyone out there reading this know anything about the ELDICO SSB radio set? Any information will be interesting to have. Also, does anyone have a manual/schematic and/or a copy of one? And, as a long shot, anyone have any junkers or parts for these radios? Any help will be gratefully appreciated in this restoration project of a very worthy old radio from the sixties.

Reply by e-mail.

73 and thanks!

Michael Crestohl KH6KD/W1

>that's why gravity has an effect on our body

I guess you don't need to take classical mechanics and physics to get in the laser program at the lincoln lab, eh? I sure don't recall any bits about "polarity" in the high school and college physics classes i had to take with respect to gravity.

Of course, if you're trying to spill the beans on upsidaisyium, you'll find Jay Ward beat you to the punch by about 30 years.

>I don't know about you but I wouldn't want a 250Watt RADAR sitting on my lap

i probably wouldn't either...but then i don't recall too many of those guns available commercially ... i want to say that you're off by a couple of orders of magnitude or more. we are talking lightweight equipment here that's operated off of car power, not a small 110V microwave oven.

Ne> actual character, yet sending goes like a snap.
Ne> Is this a common "hurdle" to overcome, or am I just odd. :)
Ne> :) I am using the SuperMorse program (EXCELLENT!) to learn, and am
Ne> wondering if the code tapes may have been a better route, and this is a
Ne> side- effect of my choice in learning.

The fastest route to learn code IMO is to utilize tapes and W1AW broadcasts.
The tape will become learned eventually but the W1AW broadcasts vary, and
the written text is available to compare to your copy.

Another route these days is to use a text to morse converter program. Learning
the code is sometimes a mundane and boring task but, as is anything worthwhile,
it is attainable. Also learning the characters at 30 WPM with 5 WPM spacing
is the easiest, most efficient way to increase your speed. Learn the
characters fast and then all you have to eliminate is space to increase your
overall speed.

Good copy and 73

The policement from the Connecticut State Police that was interviewed
regarding his lawsuit after getting testicular cancer. He said that
he would put the radar gun between his legs to prevent it from setting
off drivers' detectors, i.e. it was a manual form of "instant-on" radar
for the older handheld units that didn't have instant-on capabilities
built in. So it was done intentionally in his case. His argument
was basically that nobody told him that doing so was dangerous and
that the State had an obligation to do so.

I would like to dispell a few popular misconceptions here, as speculations seem to getting a little crazy. In order for any form of electromagnetic radiation to cause cancer it would have to trigger a change in your cells DNA. This normally takes the form of some sort of destruction or _mutation_. If the right sequence is changed in the right way, unihibited reproduction and lack of programmed cell lifetime may occur, i.e. cancer.

Now, this can only occur if the radiation you are exposed to is *ionizing* radiation, i.e. finite mass particles (electrons, protons, ions if energetic enough). The most common forms people are exposed to day to day are medical X-rays, and rocks in the soil. Electromagnetic radiation at the frequencies of light or below is *not* ionizing radiation. The coupling between this energy and cell structures in your body cannot be modeled as an interaction between a penetrating high enery particle and the cell. In order for this energy to couple into your body you would need a resonant structure whos size is some multiple or reasonable sub-multiple of the radition wavelength.

What is the wavelength of a 440 Mhz signal? It's roughly 70 cm. What structures inside your body are even 1/4 that size? Your arms and legs. Thats about it. Now, even at this the effect of the coupling will be to cause local heating. The amount of power required to heat these structures up to dangerous levels is certainly not legal for amateur operations. And thats assuming they would resonate. Since they are fairly heterogenious, I rather doubt they would. You may be able to put enough power into a smaller structure like your eyeball that would resonate, but you would need to operate at a wavelength on the order of 2.5 - 5 cm, or about 6 GHz. In order to couple into your DNA you would need wavelengths on the order of molecular sizes. That means particles.

There are molecules in your body that will exhibit vibrational resonance at frequencies in the microwave range. Water is the most common. So, if you operate at say 3-6 GHz and focus enough power into the proper structures in your body, you may cause some local heating. Note that in order to make this work in a microwave oven a fairly powerful magnetron feeds energy into an enclosed resonant cavity to build up the power levels to the required magnitude to cook your food. Note also that all you get is heating. This is unlikely to cause cancer, since to do that you must slightly damage the string without destroying its ability to function in the host cell. Cooking the cell just won't do.

Recently the FDA has responded to widespread fear of health effects due to power line and cellular telephone exposure by starting a rather large study on the biological and health effects of exposure electromagnetic fields. I attended a seminar at the University of Maryland sometime last year where the latest data was discussed. No conclusion was indicated, although they were trying very hard to find _some_ correlation. In some cases the data supported the conclusion that living under power lines *reduced* the likelyhood of

contracting some forms of cancer. This is counterintuitive. What it means is that any correlation is in the noise.

They have also failed on the theoretical and experimental fronts to show any mechanism for the alleged health effects of exposure to these fields, although they have just gotten started. They did show experimentally that exposure to strong magnetic fields caused isolated cells of one type to change shape. The cell would change back to normal when out of the field and no short or long term effects on the cells operation were found. I find this result far less surprising than they did, given that certain animals like birds can sense the earths magnetic field for use as a guidance mechanism. The cell would *have* to respond to a magnetic field in *some* way for birds to accomplish this feat!

So there you have it. Hams are more likely to suffer health effects from exposure to chemicals and smoke in their environment than from the EM radiation they produce, unless perhaps they have a full KW at 3 GHz running into an unmatched antenna taped to the ceiling of their shack. How many of those old WWII oil capacitors we used to play with contained PCB's, do you suppose?

Chuck, I think it's quite appropriate for a newcomer to a repeater to
"announce himself" for a while, until people get to know he's around. On
our machine, people tend to know what regulars tend to be listening, and
will give them a blind call even though they haven't heard them say
anything. Until people know you're there, they're not gonna call you.

Another thought, sometimes you'll hear a call for another ham who doesn't
answer. After a reasonable pause, I sometimes call the caller, just to say
"Hi." You meet people you wouldn't otherwise catch.

: IMHO there is nothing to compare to a well tuned CW operation in a
: contest. It is a ball!

For those wanting to upgrade to 20 wpm, the CW Sweepstakes will be an excellent opportunity. Most of the big guns are tooling along at 30+ wpm. Here is a technique I have recommended:

Find a loud station sending at high speed. Sit on the frequency and listen again and again until you get the callsign. You might get lucky and get some or all of the exchange as he works other people. Once you get the callsign, call by sending your callsign at the end of the "CQ test", at whatever speed you like. He or she will come back to you at high speed. (All you need to do is recognize YOUR callsign at 30+ wpm). You call will be followed by the exchange. Try to copy it, if you can. If you really want to be in the contest, ask for fills for stuff you miss. If not, send a quick "R" to signify that you got it, and send your exchange at any speed you like. If the station copies it (quite likely), you will get an "R TU" and the station will start calling CQ test again. You move on to your next conquest.

Plan on spending at least 4 hours for each of the contest days. At first, you will miss most of the information, but you will get LOTS of free practice at high speeds, especially for numbers (it is usually the numbers that get you in the code tests). By the end of the contest, you will probably find that you are copying pretty well, and you will have added a few points to a few other station's scores. You will probably have added 10 wpm to your code speed and maybe worked a few new states for your Worked All States award. And NEXT year you can do it right, send in the log and everything.

Good luck to all! See you in the CW SS (I will try it again with 10 milliwatts this year!)

You should look up the discussion of this in "Physics Today" from
July or August 1994. The field strengths from RF even when close to
a high power system are smaller (by several orders of magnitude) than
the fields due to thermal flucuations (short range microscopic ones).
This makes me very suspicous that the epidemiologists have
found a non-causal correlation (not for the first time).
Actually, it's worth looking at how they
controled for activity profiles - unless you are doing manually
powered qrp on a pedal generator you're not getting much physical
activity when qso'ing. Since execise has a reproducable and measurable
effect on disease rates this is probably important. (i can come up
with other rationalizations like solder fumes if pressed).

555. Need Help With IC2GAT

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 17:02:32 UTC
From: "Ryan Jagoe"
Message-ID: <37egf8$k83@darwin.nbnet.nb.ca>
Source record: 258663

Obout a mouth ago I droped (oops) my IC2GAT. I have not had very much time to take an extensive look at the guts to see what the cause of my problem is. I get very low audio output from the speaker and also if I connect an external speaker. Maybe someone has had a similar problem and could give me some advice. I don't feel like sending it half way across the country to get it fixed.

Thanks for the help,

Ryan, VE9BL

USING AND UNDERSTANDING DECIBELS

by

Paul H. Bock, Jr. K4MSG

Author's Note: This tutorial was originally written for the use of non-RF/analog engineers (digital, software) and non-engineers who needed an easy-to-follow reference on the general use of the decibel. I hope that some amateur operators may find it useful as well.

While the historical accuracy of the comments relating to the telephone company and telephone company engineers may be open to question (the information as supplied to me was anecdotal), the technical points made should be valid regardless of the exact turn of history.

General

The decibel, or dB, is a means of expressing either the gain of an active device (such as an amplifier) or the loss in a passive device (such as an attenuator or length of cable). The decibel was developed by the telephone company to conveniently express the gain or loss in telephone transmission systems. The decibel is best understood by first discussing the rationale for its development.

If we have two cascaded amplifiers as shown below, with power gain factors A1 and A2 as indicted, the total gain is the product of the individual gains, or A1 x A2.

Input >-------- Amp #1 --------- Amp #2 ------> Output

A1 = 275 A2 = 55

In the example, the total gain factor At = 275 x 55 = 15,125. Now, imagine for a moment what it would be like to calculate the total gain of a string of amplifiers. It would be a cumbersome task at best, and especially so if there were portions of the cascade which were lossy and reduced the total gain, thereby requiring division as well as multiplication.

It was for the reason stated above that Bell Telephone developed the decibel. Thinking back to the rules for logarithms, we recall that rather than multiplying two numbers we can add their logarithms and then take the antilogarithm of this sum to find the product we would have gotten had we multiplied the two numbers. Mathematically,
log (A x B) = log A + log B

If we want to divide one number into another, we subtract the logarithm of the divisor from the logarithm of the dividend, or in other words
log (A/B) = log A - log B

The telephone company decided that it might be convenient to handle gains and losses this way, so they invented a unit of gain measurement called a "Bel," named after Alexander Graham Bell. They defined the Bel as

Gain in Bels = log A

where A = Power amplification factor

Going back to our example, we find that log 275 = 2.439 and log 55 = 1.740, so the total gain in our cascade is

2.439 + 1.74 = 4.179 Bels

It quickly occurred to the telephone company engineers that using Bels meant they would be working to at least two decimal places. They couldn't just round things off to one decimal place, since 4.179 bels is a power gain of 15,101 while 4.2 bels is a power gain of 15,849, yielding an error of about 5%. At that point it was decided to express power gain in units which were equal to one-tenth of a Bel, or in deci-Bels. This simply meant that the gain in Bels would be multiplied by 10, since there would be ten times more decibels than Bels. This changes the formula to

Gain in decibels (dB) = 10 log A (Eq. 1)

Again using our example, the gain in the cascade is now

24.39 + 17.40 = 41.79 decibels

The answer above is accurate, convenient to work with, and can be rounded off to the first decimal place will little loss in accuracy; 41.79 dB is a power gain of 15,101, while 41.8 dB is a power gain of 15,136, so the error is only 0.23%.

What if the power gain factor is less than one, indicating an actual power loss? The calculation is performed as shown above using Equation 1, but the result will be different. Suppose we have a device whose power gain factor is 0.25, which means that it only outputs one-fourth of the power fed into it? Using Equation 1, we find
G = 10 log (0.25)

G = 10 (-0.60)

G = -6.0 dB

The minus sign occurs because the logarithm of any number less than 1 is always negative. This is convenient, since a power loss expressed in dB will always be negative.

There are two common methods of using the decibel. The first is to express a known power gain factor in dB, as just described. The second is to determine the power gain factor and convert it to dB, which can all be done in one calculation. The formula for this operation is as follows:

$$G = 10 \log \frac{Po}{Pi} \quad \text{(Eq. 2)}$$

where G = Gain in dB
Po = Power output from the device
Pi = Power input to the device

Both Po and Pi should be in the same units; i.e., watts, milliwatts, etc. Note that Equation 2 deals with power, not voltage or current; these are handled differently when converted to dB, and are not relevant to this discussion. Below are two examples of the correct application of Equation 2:

Ex. 1: An amplifier supplies 3.5 watts of output with an input of 20 milliwatts. What is the gain in dB?

$$G = 10 \log \frac{3.5 \text{ watts}}{0.02 \text{ watts}}$$

$$G = 10 \log (175)$$

$$G = 10 (2.24)$$

$$G = 22.4 \text{ dB}$$

Ex. 2: A length of coaxial transmission line is being fed with 150 watts from a transmitter, but the power measured at the output end of the line is only 112 watts. What is the line loss in dB?

$$G = 10 \log \frac{112 \text{ watts}}{150 \text{ watts}}$$

$$G = 10 \log 0.747$$

$$G = 10 (-0.127)$$

$$G = -1.27 \text{ dB}$$

Non-relative (Absolute) Uses of the Decibel

The most common non-relative, or absolute, use of the decibel is the dBm, or decibel relative to one milliwatt. It is different from the dB because it represents, in physical terms, an absolute amount of power which can be measured.

The difference between "relative" and "absolute" can be understood easily by considering temperature. For example, if I

say that it is "20 degrees colder now than it was this morning," it's a relative measurement; unless the listener knows how cold it was this morning, it doesn't mean anything in absolute terms. If, however, I say, "It was 20 degrees C this morning, but it's 20 degrees colder now," then the listener knows exactly what is meant; it is now 0 degrees C. This can be measured on a thermometer and is referenced to an absolute temperature scale.

So it is with dB and dBm. A dB is merely a relative measurement, while a dBm is referenced to an absolute quantity: the milliwatt (1/1000 of a watt). We can apply this concept to Equation 1 as follows:

dBm = 10 log (P) (1000 mW/watt)

where dBm = Power in dB referenced to 1 milliwatt
P = Power in watts

For example, take the case where we have a power level of 1 milliwatt:

dBm = 10 log (0.001 watt) (1000 mW/watt)

dBm = 10 log (1)

dBm = 10 (0)

dBm = 0

Thus, we see that a power level of 1 milliwatt is 0 dBm. This makes sense intuitively, since our reference power level is also 1 milliwatt. If the power level was 1 watt, however, we find that

dBm = 10 log (1 watt) (1000 mW/watt)

dBm = 10 (3)

dBm = 30

The dBm can also be negative, just like the dB; if our power level is 1 microwatt, we find that

dBm = 10 log (1 x 10E-6 watt) (1000 mW/watt)

dBm = -30 dBm

Since the dBm is an absolute amount of power, it can be converted back to watts if desired. Since it is in logarithmic form it may also be conveniently combined with other dB terms, making system analysis easier. For example, suppose we have a signal source with an output power of -70 dBm, which we wish to connect to an amplifier having 22 dB gain through a cable having 8.5 dB loss. What is the output level from the amplifier? To find the answer, we just add the gains and losses as follows:

Output = -70 dBm + 22 dB + (-8.5 dB)

Output = -70 dBm + 22 dB - 8.5 dB

Output = -56.5 dBm

As a final note, power level may be referenced to other quantities and expressed in dB form. Below are some examples:

dBW = Power level referenced to 1 watt

dBk = Power level referenced to 1 kilowatt (1000 watts)

One other common usage is dBc, which is a relative term like dB alone. It means "dB referenced to a carrier level" and is most commonly seen in receiver specifications regarding spurious signals or images. For example, "Spurious signals shall not exceed -50 dBc" means that spurious signals will always be at least 50 dB less than some specified carrier level present (which could mean "50 dB less than the desired signal").

I used to use a PO box, but even that isn't going to stop someone. Its a simple matter to look up anyones address in the city directory which can be found in your local library. I don't think there is anyway of staying out of that book (unfortunately). I now have a rural route address so I don't worry about it anymore.

Either way, I never mention my travel plans over the air. I may talk about where I've been after the fact, but never before.

Gee, throw in a LF now and again, Ok? Anyway, yes, FM is legal all over
HF, *but*, except on 10 meters, it has to stay in a AM bandwidth (6 kHz).
That's a very narrow bandwidth for FM. I doubt most of the Japanese rigs
with FM capability would be very usable at modulation indexes less than
one.

560. Re: CLARC Balloon Launch

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 17:48:11 UTC
From: biekert@phoenix.phoenix.net
Message-ID: <37ej4r$sg@dolphin.phoenix.net>
Source record: 258698

Update 10/11/94

Check out the CLARC WWW page, soon will have balloon photos!

http://www.phoenix.net/USERS/biekert/index.html

Here is some additional information:

Launch time: 11:06 AM local (CDT)
This was within our launch window of 10:00 to 12:00 AM local

Burst time: 12:18 PM local

Burst altitude: 94,000 to 100,000 ft -- final calculations pending.

Touchdown: 13:39 local

Flight Duration: 2 hours 33 minutes

Recovery Time: 10:09 PM local

Recovery of the payload at landing in a rice paddy in Pearland, TX found it in pristine condition with all payloads operational at power down. Members of the Pearland Amateur Radio Club and CLARC Balloon Launch team members cooperated in the final phase of recovery. The CLARC balloon launch team extends its appreciation to all the hams who helped in the search and rescue exercise.

Please include a request for all reception reports and payload directed amateur activties be fowarded to the packet or Internet addresses given on the original posting on the networks. Also any packet session log files that could be forwarded on disk would be GREATLY appreciated. These can be sent to:

CLARC
P.O. Box 57714
Webster, TX 77598

Also, our final calculations put the landing less than 2 miles from the recovery site. Prepartions are already in progess for the launch of NOSTS-2.

561. Repeater/Tower noise problem?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 18:02:47 UTC
From: David_Bourque/UB_Networks@UB.com
Message-ID: <9410111810.AA2857@smtp.UB.com>
Source record: 258706

OK,
I've been trying to chase down a noise problem on a 2 meter repeater for over a year now. I'm running out of things to look at. I'm down to guessing that I have a noise generator on the tower itself but would like to solicit comments. The installation is on a 160 foot tower, the 2 meter antenna is one of four at the top. Two of the other three are 222 and 449 repeaters. The forth is a control receiver antenna in the 222 band. The tower also has several commercial services on it. One in the low band, one pager in the 154 range, one pager at 929Mhz almost at the very top and also a CAP repeater in the 2 meter range. The tower also has three stacked 40 meter yagis on it. If you can picture this you can see that it is a mess. Oh, did I mention that the tower also supports a 160 meter vertical off the south facing side? Anyway, not all the feedlines are jacketed. This is where I think my problem arises. I've theorizes that somewhere on the tower we've got a diode junction between the tower and one of the feedlines. Has anyone got any experience with this kind of problem? If so, how does it manifest itself. What are the symptoms. How can one prove it without replacing the feedline or insulating from the tower. In principle I know it should be done but it is not my tower and I don't have complete control over what is on it. I need some supporting evidence before I go and put some effort into getting it fixed. Just to provide some more data points here is what has happened lately. This summer a new station master antenna was installed. This replaced a Diamond brand that was up there. My noise problem got worse. We replaced the 1/2 inch hardline with 7/8 hardline two weeks ago. My noise problem got worse. The receiver was tested using both an HP signal generator and by a commercial Motorola shop. The repeater is a Motorola Micor. With the antenna disconnected and the test gear connected to the receiver we have no noise. If I connect the signal generator to an antenna on the bench I can hear the problem. Now, the problem sounds like desense. Yet the transmitter is spectrally clean. Full quiting signals become very noisy or drop out completely for no apparent reason. All other transmitters at the site have also been confirmed as clean. I'm running out of things to look at. Can anyone offer any suggestions? All for now.
I've consumed enough bandwidth.
email me directly or post to the group, either is fine.

All the grounding in the world isn't going to help - it sounds like you've
got a Heathkit-like weather station. They're famous for blowing up at the
slightest hint of sparkin' in the air. My solution was to optoisolate the
wind vane/anemometer from the rest of the box.

Take a look at the schematic - the voltage that powers the LEDs in the
remote head comes from the same supply that runs the processor, etc!!
You need to run a separate power source up the pole (from a wall tumor)
that powers those LEDs and also powers optoisolators that connect to the
main box inside.

Many states also allow public perusal of the automotive license file.
So be sure not to put license plates on your car either. Oh yeah, and
don't forget to get your phone unlisted since any fool can call your
house out of the phone book to see if you are there. Maybe you'd just
better stay home all the time :-)

567. A receiver for tracking radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 20:40:21 UTC
From: linkosal@cc.Helsinki.FI
Message-ID: <37et7l$ji3@hybrid27.Helsinki.FI>
Source record: 258713

I'm looking for a scanner for 150-174 MHz OR 230-231 MHz range. The receiver will be for tracking free flight model airplanes (you put a tiny transmitter into the model, and in the case of a fly-away use your receiver to localize the model). I can use transmitters in either around 160 MHz or in 230 MHz range.

The problem is that here in Finland there are no reasonably priced receivers for either of those frequencies, and wide range scanners cost at least $800. Jim Bradley, who is one maker of those transmitters, writes (I quote):

Any receiver that will cover the 150 MHz to 174 MHz range will work. Radio Shack sell several programmable receivers, called scanners, starting at $120 but these are often on sell for as little as $90. K-mart also sells one model made by Uniden called the Bearcat 50.

That explains quite a lot. The receiver should be syntheziser-tuned, with a rather narrow receivibg band, and most of all: it should have a received signal strength meter, or some other way to determ the strength of received signal (manually adjusted amplification with no automatic compensation for varying signal strength).

A friend of mine will travel to the US soon, and could bring me a suitable receiver with him. I would now need info on suitable models sold on Radio Shack or some other company like that, brand&model names and prices.

I'll be most grateful for any info you could send. I think this is not of general interest, so please e-mail me at tapio.linkosalo@helsinki.fi.

I'll forward the info, if anyone else is interested. Thanks!!!

-Tapio-

568. WANTED! Schematic for Alinco SR-4 simplex rptr.

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 20:47:02 UTC
From: rbellville@aol.com
Message-ID: <37etk6$2qm@newsbf01.news.aol.com>
Source record: 258712

I need a schematic for an Alinco SR-4 simplex repeater. Calls and faxes to Alinco have not proved fruitful. Will pay copying costs!

Thanks - Rob, N1NTE

569. Ten Tec kit update

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-11 20:56:26 UTC
From: n1ist@netcom.com
Message-ID: <n1istCxJ0u2.BtC@netcom.com>
Source record: 258651

Just got off the phone with Ten Tec, and here is the latest news:

1200 2M Amp - sold out first two production runs - should ship in a few weeks
1220 2M mobile rig - New firmware, more memories, sometime in December!
1253 9 band SW rx - In prototype - should be out in 6 weeks (right...)

In stock:
1000A, 1000B, 1000C boxes with hardware
1001 RF preamp
1050 BFO
1051 Transmatch tuner
1054 4 band regen. SW rx
1059 3M fox transmitter
1060 9 position electronic selector switch
1061 6M to 10M rx converter
1064 smart squelch
1201 desk mike
1203 dummy load
1206 hand mike
1207 variable capacitor
1225 G5RV
1550 audio amp
1551 speech processor
1552, 1553 ??? (not in my catalog)

No word on the 6M transverter (but it probably is just sold out). The
Argo RF deck was cancelled a while ago.

Why is it that the items that I am interested in are always the last ones
available? I have had to stop recommending Ten Tec kits to my club members
because of their poor shipping history (2 kits ordered, each time I call
they quote another 6-8 wks delivery time). I have never seen one of their
kits, so I can't say anything about their quality, just their marketing...
I guess they don't realize how much this is hurting them.

/mike

To all radio amateurs

SB SPCL ARL ARLX027
ARLX027 EME operation cancelled

EME operation canceled

The ''Big Dish'' earth-moon-earth operation from VE3ONT on the first weekend of the ARRL EME Contest October 29 and 30 has been preempted by professional use of the dish, which will be used by radio astronomers participating in a worldwide supernova observation experiment.

According to Michael Owen, W9IP, operators expect to have access to the 46-meter dish for the second weekend of the 'Test, November 26 and 27, as previously announced. The November operation will be on 144 MHz on both days, transmitting on 144.100 and listening 144.100-144.110 from approximately 0538 to 1645 UTC on the 26th and 0646 to 1713 UTC on the 27th.

Losing the October weekend cost the group planned operations on 50, 432, and 1296 MHz. The dish is part of the Algonquin Space Complex in Toronto.

SB SPCL ARL ARLX028
ARLX028 Video award for CQ

Video award for CQ

''Getting Started in VHF,'' a video introduction to operating on the Amateur Radio VHF frequency bands and produced by CQ Communications, has won a Silver Hugo Award from ''INTERCOM '94,'' the International Communication Film and Video Festival.

The video was honored in the competition's ''Educational -- Adult Audience'' category, CQ said in a press release.

Festival director Michael J. Kutza said that ''there was a substantial increase in the number of entries this year and competition was more intense than ever.'' This was INTERCOM's 30th annual film and video competition.

''Getting Started in VHF'' is intended both for new hams and for more experienced amateurs who are trying VHF operating for the first time, CQ said. The program was written, produced and directed by Richard S. Moseson, NW2L, executive producer of the CQ Video Library, and ARRL Northern New Jersey Section Manager.

''Getting Started in VHF'' is the second CQ video to win an award. Earlier this year, ''Ham Radio Horizons,'' an introduction to Amateur Radio, received a bronze CINDY award from the Association of Visual Communicators, and it was a finalist in the International Television Association's (ITVA) New Jersey Awards competition.

Let me take a stab at it. I sell hard wired and wireless systems. The brands I sell are mostly Ademco and Linear. Both are commercial brands, not the consumer grade, user-installed systems that Radio Shack, Stanley, or the Home Builder's Warehouses type stores might sell. They work on a freq of approx 302 MHz. They use digital encoding.

I don't see how there would be a conflict with ham eq and the system. The only conflict that might exist, although I have never heard of it, would be to transmit near a sensor, such as a PIR, swamp out the electronics and cause a false alarm. The ham transmitter would not confuse the alarm receiver, but would cause the PIR to transmit a false alarm. If the ham transmitter, was on the same freq as the alarm transmitter, the alarm's receiver would be swamped out. Hams don't transmit on 302 MHz, nor would there be a harmonic on that freq.

My experience has been with short range wireless. There is also a long range wireless. I haven't had any experience with long range.

I have heard of problems with hard-wired systems, being interferred with by police radios, causing false alarms.

Hope this helps.

Hi Ed...

I couldn't agree with you more...CW Contests and listening to the lower 25kHz. of each band is what did it for me...The other thing I did was give my microphone to a friend and fellow ham...I told him not to give it back until I upgraded...What do you know...Within 2 months I had overcome my code barrier...

By the way Ed, its been a while since we met eye to eye (Around 1-2 years) but I'm glad to see you're still with the lab staff...It's good to see guys like you and Zack here on the net...Keep up the great postings...

>the written text is available to compare to your copy.

This last weekend I bought a shortwave receiver (Grundig YB 400 - it's great) and I've been listening to W1AW for a few days now. In fact, I just got back from listening to their `slow code' session. Having listened to a lot of CW over the past few days, some of it very fast, going back to the slow code session and my ARRL tapes is a cinch. It's almost like "c'mon send the next character already!" :-)

I also heard a few hams on 2m helping one of their friends with suggestions on how to improve code speed. Relating to computer programs, one thing they said that seems to make a lot of sense is to always listen to the characters at at least 18wpm, but have enough space between the characters until you can copy reliably. Then shorten the time between characters.

Trying to copy from W1AW, one thing that's taken me a bit aback, having never listened to the HF bands before, is the amount of interference. At first I thought it was the selectivity of the radio, but now I'm sure it's simply of other people transmitting on the same frequency. Yesterday evening, on 40m, W1AW comes in with a distinct bassy sound, though fairly weak. While I'm trying to copy, two other hams with a much stronger signal are having a QSO on top of this and yet a third person seems to be doing some sort of test - sending out very long tones (but no i.d. -- isn't that illegal?). Anyway, it takes a lot of concentration to copy that W1AW signal in the background. My code test this Sunday ought to be easy in comparison.

You know you've been studying code too long when you automatically try to decode random clicks and rattles inside your house, car, or office.

Don't jump to conclusions. To non-hams, anyone who talks on a radio is a
"CBer". The neighbor could be a ham, although I would expect a ham to be
a bit more co-operative with a RFI problem. There are some "ham jerks"
running around too, unfortunately.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 OCTOBER AND FORECAST FOR 12 OCTOBER - 14 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 88/32

GOES satellite data for 10 Oct
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 8.9E+08 (high)
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Oct 13 Oct 14 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Oct: 88/32

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled

Estimated Indices : A K Observed A Index 10 Oct
Learmonth 14 3233 4332
Fredericksburg 20 14
Planetary 22 14

Observed Kp for 10 Oct: 3333 2333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Oct 12 Unsettled to active
13 Oct 18 Active
14 Oct 18 Active
COMMENT: IPS Geomagnetic Warning 6 was issued on 11 October and is
current for interval 12-14 October. Minor storm periods possible
during local night on 13-14 October due to small coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Oct normal fair fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Oct normal fair fair
13 Oct normal fair poor
14 Oct normal fair-poor poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
11 Oct -14 depressed 20% all day

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
12 Oct -15 About 20% below predicted monthly values
13 Oct 0 About 10% below predicted monthly values
14 Oct -20 About 30% below predicted monthly values
COMMENT: IPS HF Communications Warning 5 was issued on 11 October and
is current for interval 12-14 October. Ionosphere became depressed
again after dawn this morning. (Less severe depressions of 10-15% were
observed at Townsville after 22UT.) Due to the apparent strong
ionospheric response to any geomagnetic activity, fair to poor HF
conditions are now expected over the next 3-4 days as an increase in
geomagnetic activity is expected due to a coronal hole.

Well Dave...I just recieved a brochure from K-40 electronics division
and they have come out with a little device that is retrofitted in a
license plate...they say if you get a ticket by laser then they will
send you a check for DOUBLE the amount...they also state that it is
100% legal in all 50 states...and sugg. retail price is $199.99, kinda
sounds neat-o to get on and figure out how it does it...

: just got my tech ticket 2 weeks ago. When I'm monitoring, I'll say
: "KE4QPU monitoring" about every 15-30 min. Of course, I am careful not to

Well I used to do stuff like that until somebody on 2 mtr got mad.
now I am usually neve on 2 mtr and I am working on upgrading to geral, and
advancved and wish to have it done by DEC this year.

Over all I almost always have my radio on and never identify..
I do not know if my gp300 does it but I can say my radio never get keyed even
when I am not there by doing a radio check on my radio looking for it to key
up, after they tried to beep me... (on the coolness of Motorola)
I will usually only key up when I feel like talking even if it is just to
say N9SRW portable...

I would say do the same thing with your self most if not all chicago
systems are quiet unless somebody wants to talk to anybody else. Do as you
wish because a random key up like that can bring others in that are passing
through your area.

Now some of you maybe saying HUGH how does the radio get keyed if
you are not there.. It is a motorola thing my radio IDs in MDC, and the
person who called me did a remote on my radio and will identify for the
transmisson as if using a remote base. That in a nut shell is a select call
demanding an ACK.

If you are ever in Indiana say Gary to about 20 miles east
to about Milwaukee Wi if you here teh system active feel free to say hello.
If the system is quite wait a bit until somebody keys it up, it is a semi
closed system.. when it is sleeping you need MDC to wake it up for 2mins.
If not it will ignore you. And it is a benevolent(sp) dictator ship.

: Actually, most of the officers that get this form of cancer are motorcycle
: officers since they must rest their gun near this part of their body
: when chasing a car.
: Also the officers in autos may incidentally rest the gun there if they
: throw it down in a hurry to chase a "speeder".
: It's not done by choice, that's guaranteed...

Did you see the part about the trigger? How do they dose themselves if
it is shut off? Also, I would expect that they would have a bracket for
such expensive equipment - on a motorcycle. Having been a motorcycle
rider in the past, there is no way that I would trust something placed
in my lap.

I want to get my girlfriend into HAM radio (and computers).. I bought her a lap-top to learn on and now I'd like to find a really god PD program to help her study for the no-code-tech license.. The program should be cga or ega as the lap-top has no vga.. Obviously, the program must have the questions/answers form the NEW question pool and explainations of the answers would be a BIG plus, as would good graphics.. I've searched several databases and only found old programs.. Please help me!

I suspect they will be paying a lot of bucks. One of the reasons for
using laser is that the beam can be focused easily - since it is coherent,
unlike radar. That means that the beam may not even strike the license
plate. The beam could be kept to under a foot in diameter, at the points
where the automobile's distance is determined - without even having to
focus the beam. You cannot detect it, if it isn't there.

This comming Sunday.. The Last one of the season....

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
October 16th, 1994
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

>fine if it was cool, but once it was on for a little while,
>it stopped putting out sound.

There's your hint right there. You have a bad connection *somewhere*. This could be a cracked solder joint that's not easily visible. Look over the joints in the audio circuits, and touch up any suspect ones. Solder joints eventually fail if they flex mechanically at all, like with heating/cooling.

Also, are there plastic-packaged chips in there? These have a known failure mechanism where heat/cool cycles will break the bond wires off of the IC die inside the package, if the bonds weren't that great. The plastic encapsulant holds the wire against the IC when cool, but the connection breaks as the chip heats up and expands. If that's your problem, you'll have to figure out which chip and swap it.

Good luck!

Thanks to those of you who replied to my original posting, particularly to Ed, VE7FEB for his interesting comments.

It seems that there are a great number of FT-5200 owners who are very satisfied with their transceiver. Unfortunately, there are a number who are not, and of those, nearly all site a subset of the same problems:

1/ Poor TX Audio
2/ Poor RX Performance
3/ Failure of Front Panel Lamps

If you own a FT-5200, whether you love it or hate it, I would be pleased to hear of your experiences.

Exactly what I did in the PA QSO party this past weekend. I didn't make my
first CW contact until 5 months after I got my HF license. Needless to say my
copy speed suffered greatly. :-(Over the past couple of months I have
developed a love for CW. It really is fun.

Well, up to this weekend, I probably was comfortable at 10 WPM. I had hoped
that I could find some novice/tech+ working the contest so I could get some
work and not be embarassed w/ my speed. Fortunately (!) I couldn't find
anyone in the novice bands, so I had to go play with the big boys. The first
few I work probably got really frustrated with my NR ? and CTY ? fill
requests, but they gladly (I hope) complied. When I started, I would listen
to the person calling CQ and make sure I had the call and county correct and a
good feel for what QSO number to expect. This usually took 3 or 4 exchanges
before I got it all. By the time the 'test was over I found my self finding
someone calling CQ, waiting for the call (usually picked it up on the first
try) checking to see if we'd worked before and then immediately threw my call
into the fray. I was rarely asking for repeats.

I made a couple of casual CW QSOs after the test, and the speed I was used to working at seemed sooooo slow. Some of the pick could be attributed to adrenaline, and I have fallen back a little, but not much. You may not like contests, but I believe they can be used to IMPROVE operating practices!

Ron
N5HYH responded:
It would highley suppect the Non Jacket lines. These are a NO NO on a
tower. The Diode Actions can cause all sorts of problems. he site
sounds like it's full of stuff so any one, a combination, or all the the
transmitters could be causing the problems as you indicated. Good luck
on setting the nonjacket line replaced. By the way where did this
nonjacked stff come from. The most common source of Non Jacket cable
CATV which really is not a good cable for repeater operation. It was
never designed to operate at repeater power levels.

Ron, and others on the net. The NON Jacketed line is on the 222 command
receiver. It is from the CATV industry and is 75 ohm. This is the only non
jacketed stuff on the tower that is in active use other than the line that runs
up the outside of the tower that is used as the element for the 160 meter
vertical. The 160 meter antenna is insulated off the tower by PVC tubing about
2 feet off the tower leg itself. Other data points, the hi-band pager has a
single bandpass cavity on it. The lo-band, locked cabinet, doubt if has any
additional filtering. I was also corrected by another club member, the 929 MHz
antenna is also on the top of the tower. That makes 5 antennas at the top.
Does anyone have any direct experience with this kind of problem. Diode
affects? How can I prove that this is a problem? At least, can I get some
more data to point in this direction? Thanks for the help.

607. Liability Insurance for Ham Radio Balloon Launches????

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-12 15:20:00 UTC
From: johnk@ATK.COM
Message-ID: <2E9BFEB7@msm.ATK.COM>
Source record: 258674

****

HIGH ALTITUDE BALLOON LAUNCH LIABILITY ????

I have been very interested in and impressed with the number of recent high altitude balloon launches carrying amateur radio equipment. Because of the "competitive" nature of the American legal profession at this point, I would be very concerned about the liability for the balloon / payload if I were a member of one of these launch teams.

I presume that, as far as air traffic is concerned, a group would be less at risk if they filed the required FAA information so that a NOTAM would be issued. However, that does not cover the balloon / parachute / payload falling on a car in the middle of an Interstate highway, or causing a fire after falling on power lines, or (insert your worst nightmare here).

Has anyone in these launch groups considered this small but potentially disasterous financial possibility? Do you get insurance before you launch a platform? What insurance companies offer this and what are the costs? Does anyone care or is it just "launch and hope"? Who is at risk - the builders, the launchers, the trackers?

I'd be interested in hearing from anyone who has discussed or approached this potential problem. I certainly don't want to throw a wet blanket on this great work, but I'd want to get some definitive information on this before committing to be a team member. (I am NOT a lawyer!). And, keep up the good work! Please reply to the net or to: johnk@atk.com

Obviously Amateur Radio on that side of the pond is very different from over here.

On my licence is says something about the licence being granted for the purposes of self-training in Radio Communications. There ain't nothing about running 'Lonely Hearts' clubs (of either sexual persuasion).

I notice the newsflash came from an anonymous site. It'll be interesting to hear the ARRL's version!

This is a problem? I would think you have enough to deal with copying
CW and chasing that rare DX without having to listen to "House Party"
on the VCR in the background.....

>better.

Except that the darn covers fall off after a while. I can tell which editions of CQ have gotten the most use - they're the ones with the covers taped on. I think perfect binding works better if you want to keep a magazine around a while.

Is there a way to glue or otherwise bind the outer half-dozen sheets prior to stapling? This would give added strength to the binding and keep the other advantages. A tougher spine on the cover might help, too.

>>putting the mag in a bag would help.
>
>Definitely, and only adds a couple of cents to the cost while keeping
>that icky mailing label off the pretty cover too.

An even cheaper approach might be to attach a removable tab over the open side to keep the cover closed. I got one with the cover and mailing label pretty well mangled - it's a wonder that it made it to my house at all.

The Form 610 was revised such that the FCC only asks for a postal address with which to send notices. They do NOT now ask for the station address or the home address of the operator.

If you live in a tough town, perhaps the local club can organize a mail drop for the members.

That's what the no-code Tech ticket has done. The forward-looking, technically advanced people can now use VHF and UHF on packet, satellite and the like, without having to be bothered with learning Morse code. Only the archaic, reactionary OFs are still hanging out in the ante-diluvian world of HF DX and all that stuff, still poundin' brass. Leave them (us) alone and they'll (we'll) eventually die off.

It's common for agreements settling disputes like this to contain a clause stating that the terms of the settlement are not to be made public, and that both parties must approve any public statement made by either party about the dispute.

Bottom line, they ain't gonna tell you, 'cause they can't.

>
> I'm pretty sure you cant transmit light of the appropriate
> frequency/pulse duration or coherency to turn all of the
> traffic lights green like emergency vehicles do. Or can you?
>
> Matt
>
> --

My observations have been that the traffic-light controllers are watching for the strobe lights on emergency vehicles, rather than lasers. Plectron (spelling?) is one brand of equipment that puts a rather fast-pulsing (5-10/sec?) strobe light on fire trucks and other emergency vehicles, aimed forward. A complementary receiver lens on selected traffic light standards sees the flashing, and sets the traffic signals appropriately.

> [Can you] turn all of the traffic lights green like emergency
> vehicles do?"

Yes. However, "CAN you" is not the same as "MAY you".

FCC doesn't regulate light. OTOH, I guess it depends on WHOSE laws you want to break. State and local laws are what regulate whether or not you can play with their traffic lights.

Those who wish to try playing with lasers or strobes in this way might give us all a future report on whether the local jail you visit is more or less comfortable than a federal one, and what the local authorities did with the vehicle you were driving. I'd hope, for your sake, that the local constabulary wouldn't decide to search your vehicle very thoroughly for drugs, using crowbars and a chainsaw.

-Too bad you are bad mouthing TKits when you haven't even seen one.
-
-I have two of the little audio amps. Very nice. My six meter
-transverter had been on order since May. Last Friday they told me they
-were printing the manual and would ship the first ones in about 2 weeks.

I guess I gave the wrong impression. I am not bad-mouthing the kits
(obviously, since I haven't seen one, and I am familiar with the quality
of their assempled products). I am just frustrated with ordering a kit
in February that is advertised as available in May, and being told each
time I call since then that it is still 6-8 weeks away. Two fellow club
members, both kids around 13, ordered Ten Tec kits to get started in
homebrewing and are getting the same runaround. They have been turned
off not only from Ten Tec, but from kits in general. That is my complaint.

>
> -Nick KU2A QRV 1.8-2401
>

Couple of quick notes on this. #1 fm is legal everywhere am is used, EXCEPT
on 160m. And that #2 the fm signal be NO WIDER than an am signal. These two
caveats aside, all that will happen is that you and your friend(s) will have
to endure continual harrassment from the people around you on 80/40/30/20/..
all of whom are positive that fm is illegal on the lower hf bands! And besides
you're being a spectrum hog ... and all the other slings and arrows that the
pedantic amongst us can muster! It reminds me greatly of the range wars that
seem to have settled regarding packet in the cw portions of the bands.

73! es c u on 40 fm (or pm! My Gonset GSB-100 actually does pm! Great vintage!)

It would be extraordinary, to say the least, to see an announcement
like this that had not been hammered out word-by-word by the lawyers
for both sides. You can be sure that the ARRL's version is PRECISELY
the same, I think.

As for the anonymous origination, one can only presume that the author
would prefer not to make his own personal sexual orientation a matter
for public discussion. Offhand, I'd say that's entirely his own
business and his use of a anonymous redirector fully understandable.

: - Rob, N1NTE

I'll hazard a guess that most 6 meter activity is SSB or CW
these days and usually with a horizontally polarized beam antenna
(although there certainly are 6m verticles available).

For short distances as is usually involved with local nets, it probably
won't impact your ability to participate.

You can construct a pretty cheap and easy J-pole for 6m (vertically
polarized) with just some reasonable lengths of coax.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z OCTOBER 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 OCTOBER AND FORECAST FOR 13 OCTOBER - 15 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 88/32

GOES satellite data for 11 Oct
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.2E+04
Daily Electron Fluence >2 MeV: 2.0E+08 (moderate)
X-ray background: B1.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Oct 14 Oct 15 Oct
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Oct: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled, with active
period 18-21UT.

Estimated Indices : A K Observed A Index 11 Oct
Learmonth 10 2322 2242
Fredericksburg 12 21
Planetary 14 21

Observed Kp for 11 Oct: 3455 4332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Oct 15 Mostly quiet to unsettled, with possible active to
minor storm periods.
14 Oct 15 Mostly quiet to unsettled, with possible active to
minor storm periods.
15 Oct 12 Quiet to unsettled

COMMENT: IPS Geomagnetic Warning 6 was issued on 11 October and is
current for interval 12-14 October. Active to minor storm periods
possible during local night on 13-14 October due to small coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Oct normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Oct normal-fair fair poor-fair
14 Oct normal fair poor-fair
15 Oct normal fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
12 Oct -20 depressed 15-30%, with strong spread F observed
during local night.

Predicted Monthly T-index for October: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
13 Oct -20 15 to 30% below predicted monthly values
14 Oct -15 About 20% below predicted monthly values
15 Oct -15 About 20% below predicted monthly values

COMMENT: IPS HF Communications Warning 5 was issued on 11 October and
is current for interval 12-14 October. Due to the apparent strong
ionospheric response to any geomagnetic activity, fair to poor HF
conditions are now expected over the next 3-4 days is expected
due to a coronal hole.

I'm still learning code (while waiting for my NCT), but I use SuperMorse 4.04 on my laptop. Whenever I'm driving alone at night, I just open it up on the rider's seat, and put it in flash mode. That way, I don't have to take my eyes of the road for too long when a character comes up that I really want to know. I can listen for a very long time just to get used to the sound of it, and then look at a few characters whose sound I've gotten used to over the last few minutes or so.

I also put it in continuous qso mode and learn words by filling in blanks between letters I've learned and using contextual hints. I found it a fun and easy way to learn.. much more so than by Learn/Group.

I picked up my General study guide, and SM404 is the other half. Good luck.

Steve

Sure! Obstruction of justice, interference with a police officer...

I don't claim that using a laser jammer results in a violation of those
laws, but I'm sure a cop might someday, at which point it is up to the
judge. Good luck.

And how much fun they (we) are having. It's like fishing
for spring salmon on ten-pound-test fishing line. Everytime
you land one, you know you've really done something that
took skill, patience and a bit of predatory instinct.

Not that there's anything wrong with running high power when
it's needed. I just think alot of folks would be surprised
at how much they liked operating QRP if they tried it a bit.
It's not even that hard. A low (15') dipole and 4 watts get
me a QSO or three nearly everytime I'm on the air, usually
about 1500 to 2000 miles out (0/8-land).

>
>Friend of mine (Rob, WA3ULH) is a QRP fanatic. He made a CW contact from

I've always believed that ham radio loses its fun when it becomes just another way to talk to one or a few individuals. I still get a rush of adreneline when I talk to someone for the first time or someone who is passing through the area.

When I just got my ticket, I said my call sign over our local repeaters. I got no response. I tried for a day, still no response. Most of the people just wanted to talk to someone specific and wouldn't answer my CQ. I was VERY seriously thinking about selling my equipment and giving up. I tried one last time on a simplex channel and got an immediate response. If it wasn't for the hams on 147.555 I would have been out of the hobby the same weekend I got my ticket.

I always do my best to answer the CQ of someone, especially the CQ of a newly licensed ham. I haven't forgotten where I cam from.

I don't know about the "loop" types, but my R7 seems to work ok. The base
is 12 feet up, and having been a HAM only since July and with being in
the current sunspot slump, I have made contacts all over the US on 10
meters, plus worked DX all over Central and South America. I recently
made contact with Japan and Pitcairn Island.

Only thing I don't like about my R7, or any HF vert is that they are more
noisy. Anyway, that's my 2 cents worth.

[[EXAMNT10.12W : 2626 in EXAMNT10.12W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;

From: Robert Barron <BARRON@rm1.liant.com>
Subject: National Championship
To: ham-univ@listserver.njit.edu

Seeing as there appears to be some interest in a more organized
on-the-air competition amoungst college and university Amateur
Radio club stations I'm posting these provisional "rules".

Inaugural Collegiate Amateur Radio Club National Championship

1. Object: For stations in the U.S. (and Canada?) to participate in
the ARRL November Phone Sweepstakes and compete against other
college and university radio clubs across the country.

2. Contest Rules: Third full weekend of November (Nov 19-21) starting on
Saturday 2100 UTC and ending on Monday 0300 UTC. All rules, as stated
in the October issue of QST, pertain to this collegiate competition.
However the collegiate competition is limited to the multioperator,
single transmitter category.

3. Station Location: In an effort to encourage club station improvements
all contacts must be made from the established club radio station
located on a college campus. No "portable" operation from a nearby
contest "super station".

4. Awards: Official scoring will be based on results published in QST so
all participants are required to submit a valid log to the ARRL.
Provisional scores and winners will be posted to the ham-univ mail
reflector by the competition moderator. Once official results are
available in QST certificates (if any) will be mailed out.

The October issue of QST has suggested frequencies though finding other SS participants is not a problem. Look at the lower end of the general bands and in the Novice/Tech region of 10M.

A couple of issues to be resolved: Is there any interest in doing this for the CW Sweepstakes as well? What about a DX or a VHF contest? I'm not trying to leave the non-US clubs out but Sweepstakes seems like a natural for a "national championship".

I hope to get "real" SS certificates from the ARRL with appropriate mention of a station's placing in the collegiate competition. Provided that there is enough activity I'm hoping to get certificates for the top ten finishers. More on this later.

Comments? Suggestions?

(bunch of interesting but very speculative comentary deleted)

OK.

1. Most radars in patrol cars are permanently mounted. More so than handheld models. For instance the Iowa State Patrol has both a forward and rear mounted antenna. In the patrol car I drive in NW Iowa, our antenna is mounted on a rotating mount so it swings around, and works just as well as a handheld.

2. Officers place the antenna between their legs, because the are bored and not thinking. The passenger side floor is the best place for it. An officer does not want to have to many obstructions if he needs to get out of the car(or at least try to get out of the car.) I also agree some officers do eat to much junk(donuts) and that is why many die because they were to unhealthy.

3. Laser was invented for the patrol because of two reasons. First, it is tougher to detect because it diffuses very fast and doesn't carry the signature that sets many K or X radar detectors off. Second, it gives a much stronger signal as compared to K or X. With old radar it is very tough to get small vehicles on radar, unless they go very fast.

4. A new brand of Canadian radar now comes with a detector that hunts out jammers. It is available in the U.S. and it does detect laser radar jammers(I have only seen ads). There are also detectors that detect these detectors. Be advised that if you are caught with a jammer not only do you face a stiff state fine but you may be prosectuted under the federal code which is 5 yrs. and $10k. In Iowa it is a simple misdemeanor(30 days and/or $150 fine). I can promise if you are caught by an officer plan on getting a ticket and a possible vehicle inspection and impoundment to determine if there are any other devices in you vehicle(Yes, it is all legal).

5. Do not lay too much faith in all types of radar detectors. An officer does not have to show you his speed he locked you in at but it is a custom. An officer does not have to lock you in on the gun, most do but it is not required by law. If you show 71 then drop to 62, I can still give you a ticket at 71. Radar detectors only protect you because the beam did not directly hit you. It is the radiation on the beam striking various objects that gives you a signal. I will also say no one can beat the radar by slowing down. If an officer wants to stop you he will, do not think it is the radar detector warning you. If I see a radical drop in speed when I turn on the radar, I will stop that vehicle 100% of the time.

6. Police motorcycles also have permanent mounts and the handhelds have a holster on the bike. Most motor officers know better than to place the unit between their legs because it may side out and get caught on the bike or destroy the radar unit and the last thing an officer needs is to get tangled in his radar unit.

I just thought I would give some insight into the radar issue. MPH the largest manufacturer of radar was sued by an officer because of the cancer debate. It was found that there was only a microscopic chance that radar could cause cancer and that his main problem was that he was unhealthy(fat).

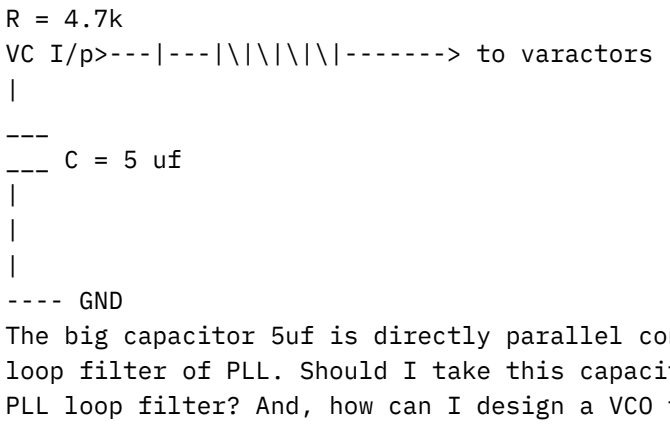
I have a question on VCO design : the resistor and
capacitor of voltage control input, normally for filtering
out the noise ,seems to change the PLL characteristics.
for example, a vc input as follows



The big capacitor 5uf is directly parallel connects with the
loop filter of PLL. Should I take this capacitor as a part of the
PLL loop filter? And, how can I design a VCO that will not affect
the PLL performance ?

>
Regardless of whether it is illegal to transmit light (or whether light
is rf and comes under the FCC) any activity that INTERFERES with a
legal police activity is illegal in most jurisdictions. And no court
is going to allow a defense that relies on our rights to free speech or
that claims that this is a federal premption.

You probably have the right to transmit at any laser frequencies because
the FCC doesn't have jurisdiction at light frequencies although they
have jurisdiction over rf which light is. But you can't interfere with
the police measuring speed limits whether it's your speed or some one
else's. And most legal experts agree that the states can regulate your
rights to monitor the police radar signals. Look at Virginia where
it is illegal to have a radar detector in your car. The courts have
held that this Va law does not violate your federal rights.

REVIEW: SCANNER MASTER MASSACHUSETTS COMMUNICATIONS GUIDE, 5th Edition
EDITOR: Edward Soomre N1BFF Editor & Publisher: Richard Barnett KA1PYJ

A complete resource of public safety operations and one-and-two-way
communications in the Commonwealth....692 pages...ISBN 0-939430-25-8
available from SCANNERMASTER PO Box 428, Newton Highlands MA 02161.
Tel: 1-800-722-6701. Price: $29.95

The ever popular MASSACHUSETTS SCANNER MASTER has been completely
revised and the Fifth Edition, published in December 1993 is now available.
There have been many changes in the two-way communications scene in the
Bay State and the SCANNER MASTER has undergone a timely overhaul to keep
up with them. The biggest change was to the State Police - last year
state-level Metropolitan District Commission Police, Registry of Motor
Vehicle Police and Capitol Police departments were all merged into the State
Police. Since each had its own separate radio communications system this
was changed to accomodate the new, larger Massachusetts State Police. The
5th Edition features a special State Police section with 30 pages of
incredible detail on their new 800 MHz system and was written with
the assistance of most of the senior state public safety radio managers.

The SCANNER MASTER is produced for the scanner and radio hobbyist and
is an invaluable reference source for beginner and seasoned veteran alike.
Many technical matters are explained and there are photographs of major
dispatch centers, illustrations, organizational charts and plenty of maps.
Also included are profiles of several of the more important "movers-and-
shakers in Massachusetts communications. Some of the other "goodies" you
will find are complete, VERIFIED ham repeater listings from information
supplied directly by regional frequency co-ordinators, a huge new Federal
section with FBI, DEA, Customs etc, great railroad, MBTA and airport detail
and updated Notification Net information with the Metro Radio Syatem codes
and frequencies.

Probably the most innovative technology in the comunications business
is the new 800 MHz trunking system. The SCANNER MASTER has a section on how
to monitor trunking and has a complete listing of all 800 MHz trunking
business users. Other frequency guides list all trunking users at 806.10
from the FCC data. SCANNER MASTER researchers have taken considerable
time and effort to look up the SMR callsign of EACH 800 MHz user (and they
really have to dig for this!) and can accurately correlate this data to
determine which repeater is being used so the listings in this category can
be more specific and accurate. EVERY business license in the state is listed
including the new 220 MHz narrowband licensees.

The SCANNER MASTER is broken down into five major sections. The first 185 pages describe in great detail the functions, jurisdictions, equipment and radio usage of every state, county, federal and regional agency, including State Police, Mass Highways, MEMA, MWRA, Massport, MBTA, marine, Coast Guard, aviation, news media and a lot more. The Community Section provides an alphabetical listing of every community in the State along with ALL radio licensees, including PL tone code information where applicable. Information on police usage is extremely detailed - including roll-call times, codes, station/unit identifiers, maps, charts, etc. The New England Public Safety Frequency Sort includes ALL police, fire,ambulance/EMS, municipal service listed in frequency order (to assist you in identifying what you are hearing). The Business Frequency Sort section lists all non-public safety agencies in frequency order and finally, the Business Type Sort lists all businesses in the guide in alphabetical order. Unfortuntely, due to space limitations the popular fire department and community profiles sections had to be left out of the Fifth edition.

There is so much more to this book. It is an invaluable reference but, more important, it can be read like a book and is packed with a lot of good reliable information. I an fairly new to scanner monitoring but my 4th edition of the SCANNER MASTER provided me with a good foundation of knowledge. The Fifth edition contains so much more timely and up-to-date data to make the hobby more fascinating and enjoyable. I've looked at the other books available in this area and the SCANNER MASTER is THE best reference source. Anyone can get the raw F.C.C. data, but editors Soomre and Barnett have done an excellent job of explaining, clarifying and amplifying the information which is something the others have failed to do. I highly recommend this book to scanner enthusiasts in the Commonwealth.

SCANNER MASTER produces guides for other areas as well and in the next few weeks I hope to examine some of them and report my findings. But, if they are of the same caliber as the MASSACHUSETTS GUIDE I can tell you now that they're going to be great!

This is the big difference between 2m and the HF bands. 2m FM has
traditionally been used as method of local communications between people who
already know each other, and for public service communications. CQ is
something heard very infrequently because: a) short range = few potential
contacts & very small chance for dx, b) Most people interested in
experimentation and talking to new people are using other bands and/or modes.

Try using 10m or below. I think you'll find your CQ's answered promptly
by hams who would just love to meet someone new in a place they currently
are not. If this means upgrading, by all means do so. You'll not regret the
effort.

666. Johnson IMTS mobile phone conversion

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-13 13:08:17 UTC
From: jotterso@sct.edu
Message-ID: <37jbg1$5hv@st6000.sct.edu>
Source record: 258497

I have a E. F. Johnson MT584 UHF IMTS mobile phone that I want to make into a portable repeater. I have figured out what to do to the synthesizer to put it into the amateur band, but the second problem is that this rig is designed to transmit high and receive low, which is opposite from how the local coordinating body wants things. I want to change the duplex offset.

This radio uses direct synthesis of the receive LO, which is 21.4 MHz below the RX freq. The exciter uses an offset oscillator (which it FMs) to mix with the LO to get the TX freq. I think that I can change the offset xtal from 13.2 MHz to 8.2 MHz to change the duplex offset (the crystal is doubled and then mixed with the LO), but there are several capacitors in the reference oscillator/mixer/buffer amps that I expect that I will need to change as well.

I called Johnson, who said it can't be done, but I don't buy that. I figure that somebody, somewhere has already done this, maybe Johnson themselves, for using this radio (or parts of it) in some other service... Does anybody have any ideas/suggestions/conversion descriptions???

Many thanks...

Source record: 258599

The AT-18 handheld transceiver from ADI has three different output power levels:
low power (0.35 W), medium power (2.5 W) and high power (5W).
The high power level of 5 Watt is possible with a 13.8 V power supply or -battery.

While the different functions on my set function properly, this is not so with the hig pow
er setting. Although the LCD-display indicates that the set is switched to high power,this
is not confirmed when measuring the power output: the Wattmeter indicates the same
power output as for medium power.

Before investigating this further I would like to know if other OM had the same experince
or could give me some hints.

Hi
I'm planing an activity in OK on 10-15 nov 1994 and I'm looking for help with geting permission for working in Slovakia. I'm planing working from Tatra Montains top of Lomnicki Stit (about 2300 m) on vhf. I'm from Poland and I have to obtain permission so if there is anybody from Slovakia I will appreciate any help.
Im planing work on 2m band FM and SSB on 9 element Yagi antena. If I will manage to rent a 70 cm radio I will be active there too. If I will not get the permission i will work from Poland Kasprowy Peek 1995m with good view on NW to NEE both. From Slowakia It will be SEE to SW.

From: MOWE@SLUMUS.STLAWU.EDU
Message-ID: <13OCT94.09323447.0017.MUSIC@MUSIC.STLAWU.EDU>
Source record: 258495

As previously announced, the Toronto VHF Society's proposed EME
operation in late October has been cancelled due to a newly-
scheduled international supernova observation set for the same
time period.

We have been advised by the Institute foe Space and Terrestrial
Science (ISTS) that they will do everything possible to ensure
availability of the 46 meter antenna for the November 26-27 contest
weekend. VE3ONT will operate on both of these days on 144.100 MHz
(listening 144.100 - 144.110).

In addition,
ISTS has informed us that the antenna is currently available to us on
the two days prior to the November contest weekend. VE3ONT
may operate on Thursday Nov 24 and Friday Nov 25 on 50 MHz, 1296 MHz,
and/or 10 GHz. These plans are tentative and subject to change.
Announcements will be made on the EME nets, packet BBS, and Internet
when the details are finalized.

Everyone should be reminded that dish availability is always subject
to last-minute changes. As non-paying users at the Space Complex, we
are obliged to bow to commercial operations. Please also keep in mind
that winter weather at the end of Novemebr can be very unpredictable and
may have a great effect on our success.

Stay tuned to the nets for up-to-date announcements or call Peter
Shilton (VE3VD) at (905) 774-8766 evenings or Dennis Mungham (VE3ASO/
VA3SO) at (613) 998-7330 days.

672. Want to buy crystal controlled 2M rigs. Help!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-13 13:42:53 UTC
From: asirene@ntuvax.ntu.ac.sg
Message-ID: <1994Oct13.214253.1@ntuvax.ntu.ac.sg>
Source record: 258464
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I want to buy the following transceivers second hand so if
you have one, I'd appreciate it very much if you will sell
to me. I am trying to acquire these rigs for use by Singapore
HAMs. In S'pore, we're only allowed a very limited number of
models and class of 2M radios. As a result the 2M activity
here is very low. This is due in part to the lack of approved
radios available. So, a ham appealing to the ham community,
if you own one of the following, please consider selling it
here. Thanks. E-mail me please.

ICOM IC-22A
ICOM IC-215
YAESU FT-2F
YAESU FT-221
KENWOOD TR-2200A, TR-2200G
KENWOOD TR 7200, TR 7200G

When e-mailing, please include information as follows:-

1. A brief description of the condition of the radio. We
want working sets only. Hopefully not too bashed up
if even then we will still consider if the price is
right.

2. Dimensions of the radio and whether this is a mobile,
postable or HT rig. If possible, please include the
approximate weight since this will be sent via Air Mail.

3. Accessories and manuals, their availability.

4. Power supply, what type, battery, external.

5. Expected price, please nothing more than $70 tops. For
US Air, the cost is usually $35 or so. I am hoping to
keep the total cost to about US$100 so I'd appreciate
if you can make this cheap for us. We're not allowed to
use synthesized sets or to own them. Most of the newer
hams are students. You can keep the crystals if you wish
but leave in one pair for testing purposes.

6. Mode of payment is usually in an International Bank Draft
drawn in US Dollars (Citibank). Please include mailing
address and full name that will be put on the Bank Draft.

Thanks to all kind hearted souls out there helping out a struggling
ham community here. Please reply ASAP. Thanks.

73,
Daniel

Its funny that I should read something like this today.... I've had 2m equipment since March and have had many enjoyable conversations on it. But as is stated, sometimes you get in a rut and do nothing but talk to the same people all the time. Especially if you have a one hour/one way commute that is regular. You sometimes don't even have a choice of who you talk to. So, for the last month or so I have been relatively silent on the repeater. Until this morning. I live in NW Indiana and commute to Chicago to work. One of my intelligent children sabotaged my alarm clock and make me miss my window of smooth hassle free driving opportunity. Realizing that it could take me a little longer than the normal hour to get in to Chicago, I decided I might try to pass the time a little by talking on the repeater. So I threw my call out ... and to my surprise a call that I had not recognized came back. After a few minutes of exchanging pleasantries, Tom introduced me to his friend Ron. They were both truck drivers working for a company in Chicago running freight between Chicago and Indianapolis. Tom was running up US 31 to South Bend and then over to Chicago and Ron was taking the direct approach using I-65. I found out that they rarely are out of communication while making their runs and it helps them pass the time while they are driving.

It was then that I realized that I had heard them several times over the course of the last 8 months but never MADE the opportunity to talk to them. Shame on me. This made me wonder about my own operating practices. In reviewing in my head, I was able to confirm that out of >100 members in our radio club (which operates this particular repeater) I have only talked to approximately 15. There is a goldmine of information in your repeater area to be tapped into. And I would bet there is AT LEAST one person on your local repeater that:

1) Would love to make a regular CW sked to help you improve your speed (Gus)

2) Help you put up or build your first antenna (Dennis)

3) Help you evaluate rigs for your first purchase and help set up your operating environment (Jim)

4) Show you how to use Packet Radio or other digital modes (Stan)

5) Would love to have you operate with them at a special event (John)

6) Teach you about radio direction finding (Foxhunting) (Bill)

And the list goes on .... Parenthetics are the gentlemen that have helped or offered to help me.

There most likely is amateur experience in your area to cover most areas in amateur radio. In todays "plug and play" world, the Elmer is often times overlooked, they have been a valuable resource to me and have always been glad to help.

So, in closing, the next time someone comes onto the repeater that you don't know give em a call. They might be just the person you need to talk to to get something straightened out, OR YOU might be just the person they are looking for. ;^)

THIS IS A GREAT HOBBY!!!

Hi Gang, just bought a Yaesu 5200 to put on my motorcycle. I did this mainly because of the remotability of the head.. otherwise would have used my Icom dualy.
I would like to modify the rig for extended Xmit/Rcv into the MARS freq's and to be able to listen to out of band as well. This prompted me to wonder if there is a FAQ that has unlisted features or other mods that are known and easy to do.

Appreciate any help..... Bill

[[EXAMS10.12 : 2608 in EXAMS10.12]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

AFTER THE EXAM - HOW LONG WILL IT BE BEFORE MY LICENSE ARRIVES?

If you've recently passed your initial examination for an Amateur Radio license, or if you've just upgraded, please accept our warmest congratulations! Now that you've passed the test, receiving your license in the mail is the next step.

The FCCs current license processing time has recently been at upwards of 14 weeks. In addition, there will be extra time required within the volunteer examiner system of two weeks or so allowing your VE Team and VEC (if for Technician class or higher) time to process your application, your license might not arrive for up to 16 weeks.

To keep your wait for that new license or upgrade as short as possible, we are taking the following steps to give you the fastest possible service.

We have begun providing our VE Teams with express OVERNIGHT mailers for the return of applications from ARRL/VEC exam sessions to us at the VEC--and we at the VEC have begun sending our daily packages to the FCCs Licensing Facility via an express OVERNIGHT service.

We are also encouraging our VEs, and imposing the same emphasis upon ourselves, to process examination packages as quickly as possible to expedite your license.

Having implemented the above procedures, the ARRL/VEC wants your wait for your new license to be as short as possible.

If you have any other suggestions about the program, or services we provide, please feel free to contact us.

You can help keep the processing time as short as possible by ALWAYS bringing all ORIGINAL CSCEs (plus copies of them) and your ORIGINAL FCC license (and a copy), plus your identification documents (photo-ID emphasized), to every test session you attend.

THINGS TO BRING TO THE EXAMINATION

Be prepared to bring the following items with you to VEC examinations: Your original current FCC-issued Amateur Radio license (and a copy of it)--if you are licensed; Any original Written or Code Element credit documents (CSCEs) which are currently valid; Two forms of identification (e.g., a photo-ID or drivers license and another item indicating your current name and address); A calculator (if necessary); A pen and two pencils; and, the applicable examination test fee ($5.75 for 1994 test sessions).

TECHNICIAN CLASS GRANDFATHER CREDIT

If you hold a Technician class license which was issued prior to 3/21/87, you are not required to take the Element 3B (General class written) examination if you can provide a copy of your FCC-license dated before that date. If your licensed has since been renewed, and if you don't have a copy of the pre-3/21/87 license, you must seek a verification letter from the FCC.

To do so, write to FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245 and request a letter of "Verification of Technician License Held Prior to 3/21/87"--verifying that you were licensed as a Technician class licensee before that date (the date the Technician Question Pool was split off from the General class Question Pool -- March 21, 1987). After you receive that letter from the FCC, bring it to the test session with you in order to claim your deserved credit.

LOST LICENSES

If you have lost your license, be aware that VECs are not permitted to submit any upgrades to the FCC without a copy of your current license attached to the 610 form. In order to expedite your upgrade, you must write the FCC and request a replacement license. Since that can take several weeks to arrive, we recommend that you also request a Form 1010-B License Verification Letter from the FCC which will arrive in a couple of weeks--and is legally binding license document. You may use that form as a license until your Form-660 license arrives. The original and a copy of your License Verification Letter must be brought to the test session to verify that you are currently licensed--the copy of which will be attached to your upgrade application (in lieu of an actual Form-660 license copy). To request the Form 1010-B License Verification Letter, write to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you--also be sure to request that they send you a License Verification Letter verifying that you are licensed.

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the

hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. For information and applicable forms, send a SASE to the ARRL/VEC, 225 Main St, Newington CT 06111, and request our Handicapped Information Package.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

Its my observation that the most consistant 6 meter activity is FM, either
simplex on 52.525 Mhz or some repeater. These guys are using vertical
polarization. I plan on installing a 1/4 wave ground plane after I get
it unsnarled from the Morning Glorys and this time I'll make the radials
slanting down for a better match and lower angle. Then I'll be listening
on 52.525 and when I hear the locals talking to DX I'll fire up the Clegg
99'er on 50.4 Mhz and start hollering.

Well, there is an easier solution: get a PO Box!! It doesn't have to be a
US Postal "Service" box either, any commercial provider will do.

Remember, the 610 no longer prompts for a station location ;-)

> This is very classy. I was very impressed.

Operated a rig other than my own for the PA QSO Party last weekend. On Sunday I ran across several hams participating with relatively slow CW. I hadn't figured out how to get the keyer slowed down, so came back sending Farnsworth at about 40/10--don't think they were prepared for the character speed. Finally got that sorted out and was able to answer at a reasonable speed, but then the computer had to be slowed down (automatic report sent and all)...sending was so much easier back in the days of straight keys and bugs. But logging was pure hell.

Bottom line--it's not always ignorance of courtesy that causes the too-fast reply; it may be ignorance of the equipment.

683. ARRL And Gay Hams Settle Complaint and MORE

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-13 17:36:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2E9CF21A@smtp>
Source record: 258485

On Wed, 12 Oct 1994 15:38:45 +0000
Mike@g4kfk.demon.co.uk (Mike Gathergood), replied on the
subject: ARRL And Gay Hams Settle Complaint and said

"On my licence is says something about the licence being granted for the purposes of self-training in Radio Communications. There ain't nothing about running 'Lonely Hearts' clubs (of either sexual persuasion)."

I would have hoped that most civilised people would realize that the days of technical afficionados, you know the ones that say "talk to you on 600 ohms" instead of "call you on the phone" are long gone.

Amateur Radio is a method of radio communications intended for communications training, experimentation, international goodwill and anything else that is not a business. In the US, Canada, Australia and other places, Amateur Radio has a high profile because it is a public service. Radio hams can help people in need, pass messages without wondering who may be listening, call the police or ambulances when the need arises, pass on messages on behalf of third parties and soon. In the UK, and most of Europe, thats pretty much out of the picture because it is not allowed. Even the UK license says "license granted for the purposes of self-training in Radio Communications." Why is it just that?

Why does it not say that you can participate in public events, perform public service, help an old lady call her sister somewhere else, call home from a mobile when late so your kid knows nothing happened to you, and so on? Why are such actions seen as cutting-into the profits of the telecommunications companies? Has anyone ever done any research into the subject of what it would happen if traffic was allowed? Doesnt the UK realize how much it would help if this was done. Just thinkof the increase in the profile. After all the UK leads Europe in liberalizing communications?

To change things you need to take action. You need to 1/realize why there must be change, 2/why it would be much better with change and 3/take action to change it.

Even the third party traffic with special events stations(currently allowed in the UK), came as a result of the Falklands war (so that residents of the Falklands could talk to their folks back home) not exactly a peacetime public service.

So, before anyone takes a snipe at the US amateur radio system, which is the freer and the most flexible in terms of public service in the world, think about what you could do to help your country match it.The RSGB has the power and members to make changes, but if the people at the top dont understand

what the point is, then you might as well forget it.

Had this problem at a Mobile Telephone Site. The symptom was high levels
of randomly occuring intermod up to 13th order or higher. We were able
to make the problem 'come and go' by shaking the tower, but never could
pinpoint it to which 'joint'. Also there were numerous places where
'cross members' touched, but weren't 'attached' to each other.

The solution that finally solved the problem, was to put a 'spot weld'
at every point where two pieces of metal 'touched' without being bolted
together. (About 3 per 3ft of tower). Took someone with an arc welder
and 150' of cable, the better part of a day to do the job. (150' tower).

You'll need to borrow a good spectrum analyzer, connect it to the coax
for the reciever that's having the problem. Then have someone climb
about halfway up the tower and 'shake it' as hard as possible. Watch the
analyzer for signals around the receive frequency.

I noticed that in a lot of stations I worked. It was almost like driving a semi at highway speeds and then slamming on the brakes. After I sent my report, I would listen to the OP get going again, and it was like trying to get the semi back up to highway speed without downshifting.

I really appreciated the consideration given to us slower coders. The fast letter/wide spacing didn't really faze me. The few that wouldn't/couldn't slow down were tough though.

689. GB2RS News 16th October 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-13 18:15:57 UTC
From: dave@llondel.demon.co.uk
Message-ID: <782097357snx@llondel.demon.co.uk>
Source record: 258616
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 16th of October and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And there's a special Good Morning to all scouts, guides, cubs and brownies who are listening from Jamboree On The Air stations today. We hope you enjoy this taste of amateur radio.

Now this week's headlines:-

The RSGB has ensured the future of amateur radio at the Science Museum,

The age limit on qualifying for a Full Licence has been lowered,

And the propagation forecast indicates that southern stations may get more out of next weekend's 21/28MHz Contest than those in the North.

As the result of a meeting between the RSGB General Manager, Peter Kirby, G0TWW, and the Director of the Science Museum, Sir Neil Cossons, on the 6th of October, the future of amateur radio at the Museum has been secured. The Museum Director has agreed to enter into discussions with the RSGB with a view to providing an innovative, state-of-the-art, hands on exhibit to replace the existing station which will close, as planned on the 7th of November. It is hoped that whilst the new station is planned and built there will be an opportunity to keep the GB2SM callsign on the air.

We are pleased to report that following recent discussions between the RSGB and the Radiocommunications Agency, the minimum age limit on the Full Amateur Radio Licence Age has been reduced. This removes the anomaly whereby young people who had passed the Radio Amateurs Examination were unable to obtain a Full Licence until they reached the age of 14. The RA announcement reads as follows:

"Amateur Radio Licence Age Requirement Reduced: Holders of the Amateur Radio (Novice) Licence who are between the ages of 10 and 14 years will now have the opportunity to obtain a full Amateur Radio Licence provided they meet certain conditions, the Radiocommunications Agency announced today.

"The conditions that will be applied are as follows. The person must be at least ten years of age and must have held an Amateur Radio (Novice) Licence Class (A) or an Amateur Radio (Novice) Licence Class (B) for at least one year. In addition, they must have passed the required examinations for the full Class (A) or Class (B) licence, including the 12WPM Morse test for Class (A)."

A Microwave Round Table meeting takes place today, Sunday the 16th at the Flight Refuelling Amateur Radio Society Clubhouse, Merley, near Wimborne, Dorset, commencing at 10am. The attractions include technical talks, calibration and alignment facilities, plus of course the usual round table discussions. There will be a bring and buy stand, hot drinks and snacks. All are welcome to attend.

An RSGB Regional Meeting takes place next Saturday, the 22nd of October, in Bristol. Doors open at 12.30pm when light refreshments will be available, and the meeting commences at 2pm. Members of the RSGB Council will be in attendance plus representatives of HQ. RSGB members should see the October edition of RadCom which has full details and a map of the venue. Non-members are very welcome to attend and they can obtain further information from the RSGB Liaison Officer for Avon, Dave Collins, G4ZYF, on 0272 676381.

The Radiocommunications Agency has informed the Society that the government of Qatar has now agreed reciprocal licensing. This is based on their General Class Licence and the UK's Full Class A Licence. Applications should be made to: Qatar Public Telecommunications Corporation, PO Box 217, Doha, Qatar.

Now news of a Rally cancellation and change of contact details:

The Leeds and District Amateur Radio Society wishes to announce that due to circumstances beyond its control the Christmas Rally, scheduled for the 4th of December 1994 has had to be cancelled. Further details from G0IBU who is QTHR.

The Bishop Auckland Amateur Radio Club Radio Rally which is to be held on Sunday the 20th of November has a change of contact person, the new contact is Nick Dingle, G1XNI on 01388 488533.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Botswana, A22MN is now active every other week on 160 metres until early November, when conditions usually deteriorate. He will work split frequency using 1.828MHz and 1.832MHz on SSB and CW.

From the Falkland Islands, G8XFT will sign VP8CQJ from Tuesday the 18th of October until February 1995 on all bands using SSB and possible digital modes.

From Nauru, JA3JA will sign C21/JA3JA from next Thursday the 20th to Monday the 24th. Operation will be on the 10 to 80 metres bands on CW, SSB and RTTY.

And from St Maarten, WB1HBB will be active as PJ7/WB1HBB from next Friday the 21st for one week. Check 14.263MHz at 1230 and 2100 UTC.

We know of no rallies for today Sunday the 16th, but the following Friday and Saturday, the 21st and 22nd of October there is the Leicester Amateur Radio Show. This is to be held at The Granby Halls, Aylestone Road, Leicester. This is just off the M1 motorway, junction 21. Parking

arrangement will be better than in previous years, with special arrangements for larger vehicles, as the old cattle market is still being used but it has a height restriction. Doors open daily at 10am, or 9.30am for disabled visitors. The event features an extensive trade exhibition, an RSGB Book and Information Stand and a bring and buy stall. Morse Tests will be available on demand during the two days, but prospective candidates are reminded that they need to provide two passport-type photographs, together with the test fee. The RAOTA AGM will be held in the conference room on Saturday. Full catering and bar facilities will be available. Talk-in will be on channel S22 and SU22 by GB2GH. The October edition of RadCom has full details of the show including a stand layout. Further information can be obtained from Frank Elliott, G4PDZ, on 0116 287 1086.

Now for the HF contest news:

The RSGB 21/28MHz CW Contest is today Sunday the 16th from 0700 - 1900 UTC. See the June edition of Radio Communication, page 82 for further details.

The CQ Worldwide DX SSB Contest takes place in two weeks' time, from 0001 on Saturday the 29th until 2359 on Sunday the 30th of October. This involves all bands 160 - 10 metres but excluding the WARC bands. See October RadCom page 18 for further details.

Next some VHF contest news:

The second of five RSGB 1.3GHz and 2.3GHz Cumulative events takes place next Wednesday the 19th from 2030 to 2300 local time. See July's RadCom for details.

The next RSGB 432MHz Cumulative Contest is on Thursday, the 27th of October, from 2030 to 2300 local time. See the July edition of RadCom, page 82 for further details.

And now the solar factual data:

The period from the 3rd to the 9th of October has seen a generally large increase in geomagnetic activity. An aurora occurred during the afternoon period of the 3rd, and was preceded by an HF band enhancement on the 2nd, which was most noticeable on the 28 and 50MHz bands.

The electron fluence levels have remained high. The only flare of any note reported during the period was a B4.2/SF on the 9th which resulted in an increase in the X-Ray flux levels. Though numbers are low, the sunspot indices have increased every day and meaned at 45. Solar flux levels have also increased slightly with the flare activity from 74 units on the 3rd up to 87 units by the 9th, averaging 81 units for the period. The 90 day solar flux average on the 9th was 78 units.

The geomagnetic field started the period at 'major storm' levels, with a sudden storm commencement at 2230 on the 2nd of October. This lasted over the next few days. This activity is believed to be due to a

favourably positioned recurrent coronal hole feature. Activity has generally been very unsettled, being up to sub-storm levels on many days. It reached full storm on the 3rd together with an aurora. The Ap index reached 71 units, about K7, the highest level since last April. The period averaged a sub-storm level of Ap 34.7 units. Levels were declining by the 9th as this bulletin was being prepared. The state has been 'mag storm alert' for high latitudes most of the period. The X-Ray flux levels increased almost every day from A1.0 on the 3rd, up to B1.0 by the 9th giving an average of A5.0 for the period.

The aa indices, as reported by the British Geological Survey for the period the 27th of September to the 3rd of October, started at quiet to unsettled levels, with the 30th being down to only 8.5 nanoTeslas. However, on the 3rd, during the height of the storm, it peaked at 137 nanoTeslas. The 3rd averaged 97.1 nanoTeslas, about K5, whilst the average for the period was 28.7 nanoTeslas, about K3.

I'll repeat the figures. Spots - 45; Flux - 81; Ap index - 34.7; X-ray flux - A5.0.

Now the ionospheric data for Central France:

Not all the data is to hand this week but the F2 daytime critical frequencies at Poitiers, as reported by Meudon, have been affected by the high levels of geomagnetic activity, and averaged about 5.6MHz. The darkness hour lows averaged about 2.6MHz. There has been spread F lasting up to 8 hours some days and blanketing E lasting up to 2 hours on most days.

I'll repeat the figures. Highs - 5.6MHz; lows - 2.6MHz.

And lastly the solar forecast:

This week, the quiet side of the sun will be rotating away. Solar flux levels are expected to be at about the mid 70s. Geomagnetic activity is expected to be quiet at first, with an Ap of less than 10, increasing to 'unsettled' with an Ap of 20 by the end of the week. This is due to the passage of a coronal hole. Ionospheric MUFs during daylight in the south are expected to be around 21MHz, with the darkness hours about 10MHz. North/south paths are expected to be the best, though east/west openings on the lower HF bands can be expected during the early mornings.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Hotel and G7 Tango Uniform series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Kilo series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Are they accessible from the Internet? Is their information any more
current than the Buffalo server (last updated in January)?

691. Alpha Bravo Charlie Delta: phonetic alphabets (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-13 18:59:40 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <37k02s$qtb@lyra.csx.cam.ac.uk>
Source record: 258612
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian and Chinese.

This posting supersedes the one of 7th September.

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
13 October 1994

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

I work almost exclusively QRP. I have a Kenwood 850S in new condition... mainly because I don't turn it on much. I have a Heath HW9, an Oak Hills QRP Classic (20, 40m) and a number of other single band QRP rigs that I have built from kits.

I have worked all over Europe on 1mw-75mw using a 2 element 5 band Quad (Lightning Bolt) on 20 meters.

I have worked many contests QRP on bands from 80-10. I call CQ as much as I hunt for callers. Generally if bands are decent I might call.. if they are bad, I hunt. I work mainly 20,30,40 on CW. I work QSOs both rag chew and DX about every day. I don't find any real secrets or hidden talents.. anyone can do it.. and I have used antennas from homemade verticals which are helically wound on PVC (cost almost nothing and are very portable), wire dipoles and G5RVs with tuners.

I have operated QRP/Mobile both CW and SSB very sucessfully from an Acura Integra and other vehicles using an old Ten Tec Argonaut 509 multiband QRP rig (3-4 watts) and various antennas including ham sticks (very inexpensive).

It could help if you were to identify your geographical location. If you are having a problem, it's possible others are as well and may not yet have narrowed down the source as closely as you.

There may then be readers of this list who are in the vicinity and could assist with the documentation and/or amelioration that you will need to really get a solution.

The unfortunate reality is that the budgets of the authorities chartered to resolve such complaints will typically force them to place a lower priority on this problem than on others that they must also handle. So, you'll want to look for expert volunteer assistance.

705. Re: Repeater/Tower noise problem?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-13 23:40:06 UTC
From: ghiscox@netcom.com
Message-ID: <ghiscoxCxMxqv.4MJ@netcom.com>
Source record: 258524

David Bourque/UB Networks (David_Bourque/UB_Networks@UB.com) wrote:
: OK,
: I've been trying to chase down a noise problem on a 2 meter repeater for over
: a year now. I'm running out of things to look at. I'm down to guessing that I
: have a noise generator on the tower itself but would like to solicit comments.

: new station master antenna was installed. This replaced a Diamond brand that
: was up there. My noise problem got worse. We replaced the 1/2 inch hardline
: with 7/8 hardline two weeks ago. My noise problem got worse.

Sounds like the noise is being generated elsewhere and is coming in
through your antenna system. It stands to reason that if you install a
better antenna and lower loss feedline then it will be stronger than it
was before.

: sounds like desense. Yet the transmitter is spectrally clean...
: signals become very noisy or drop out completely for no apparent...
: other transmitters at the site have also been confirmed as clean...

Is your building the only one on the hill? Could the signal be generated
from a mix somewhere else?

Any strong (locally generated) signal that falls on or close to your
repeater input will either capture your receiver or desense it.

:I'm running : out of things to look at. Can anyone offer any suggestions?

Is the offending noise source continuous or intermittent? If
intermittent, what other transmitters are on the air when the noise
occurs? If continuous, consider that it could be coming from one of the
receiver oscillators. Sniff around the 220 command receiver.

Can you hear the offending noise on another receiver? HT's aren't too
good for this as the frontends tend to crumble in a hot RF environment.
If you CAN hear it on another receiver, how about shielding the receiver
and using a small antenna to "sniff" around for the signal source?

If you CAN'T hear the noise on another receiver tuned to your repeater
INPUT then suspect something amiss in the frontend of your Micor. I
suspect that this is NOT the case, but check with another receiver to
make sure.

I have a program here that calculates intermod products if you think it
will be of assistance.

In any case I would be interested in hearing what you find and what
solution you settle on.

Good luck, Mr. Phelps!

707. Kindness and ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-14 02:19:24 UTC
From: jmollan@egreen.iclnet.org
Message-ID: <1994Oct14.021924.26491@egreen.wednet.edu>
Source record: 258480

There was a time when this was a small world and everyone waved as the passed each other.

There was a time in the day of the crystal-controlled vhf transceiver, (less than 20 years ago) when a "monitoring" on a repeater would get a reply in nearly every town and city.

In 1994 we have astounding technological devices that will transmit and receive anywhere in modes that were not imagined in the 70's.

At the same time as our gear has become sophisticated, we have regressed in our friendliness and common courtesy.

On a coast-to-coast trip decades ago, I would seldom be out of touch, even when using a 10 channel 2 meter rig. Now the same trip using a fancy, multi-everything rig raises few responses, even in busy areas like Chicago and Baltimore.

What is the sense in being able to communicate if do not communicate?

It seems as if the humans are failing.

708. Special Penn State ARC Meeting, Renowned Engineers Present

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-14 02:24:49 UTC
From: dcr117@psu.edu
Message-ID: <37kq5h$p3r@hearst.cac.psu.edu>
Source record: 258478

Hello all members, (and non-members alike)

A special Meeting has been called by the officers of PSARC due to the presence of some respected amateurs in the State College, PA area this week. The meeting will take place on Wednesday, October 19, 1994 at 7:00 PM, in a location yet to be determined. (We are trying to get the auditorium in Walker building, on the Penn State Campus, University Park, PA.) The following people will be in State College this week, and will attend a meeting of the Penn State Ham Radio Club:

Charles Kerns, KY7P, CEO of United Technologies, Corp.
"Old Days of Amateur Radio in State College, Circa 1930's"
Learn about the days of PSARC as W8YA!
Dr. Richard Adler, K3CXZ, renowned expert in the field of Antennas
from the Naval Postgraduate School, in Monterey California,
and former member of the Nittany ARC in the 60's.
Dr. Robert Hunsucker, KL7CYS, world renowned expert
in the field of Auroral Ionosphere and Propogation.
Dr. Ray Vincent, also of the Naval Postgraduate School,
expert in the field of HF Systems.

A presentation will be made by Penn State's own Bruce Long, on "Quartz Crystal Oscillators". Refreshments will be served.

Please contact me if you are interested in attending, and I will provide the location/direcrions, etc...

73, Dan Raneri

Prez, PSARC

>
The microwave sources used in motion detectors/radars, etc are almost allways 10-50 milliwatt units with 17db horns. Classic example sold to hams for 10 ghz 15 years ago was the
M/A Gunnplexer. 25MW I think it was. 17 db horn. 1.25 watts ERP.

Get a life.

Source record: 258538

hello. i am considering upgrading my decade-old kenwood 2500
2-meter handheld...and am looking at the Icom IC_W21A, which
is currently on sale. i am not familiar with that unit, and
a check through two years of QST revealed many ads for
the unit, but no specifics or reviews. also, there are
also some sikilarly-named models (e.g. IC-W21AT;IC-WTA)
which apparently are totally different units (with
different prices).
i would much appreciate hearing the evaluation of
anyone in this group who is familiar with the particular
model i'm considering...what did you like or not
like about it...would you buy it again. your subjective
opinion carries more weight than any advertising
bragsheet.
please reply to my e-mail address below. i promise
to acknowledge all responses.
thanks!

Actually, the most accessible ftp site for 2 line keplerian element sets
is not a nasa sight at all. It is:

archive.afit.af.mil (129.92.1.66)

I do not believe this is located at the actual site where the sets are
generated daily from radar data. I believe it is a second site that was
chosen as more accessible. Shucks, I forget the subdirectories, but they
are easy to find. The master set is there along with several subsets with
related satellites.

Hey, the military may not tell us what we want to know about ET's, but
they will let us keep track of our own spaceships...
Bye... Ted..

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ----------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (9/94)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Send Questions to the Newsgroups, Not the Editors (9/94)

** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (2/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)

** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

727. Email callsign servers

No, but try archive.afit.af.mil in /pub/space.
The only 'problem' with this source is that in
they use different names for many of the amateur
satellites but you can easily write a program
that uses the nasa id numbers and substitutes names.

Hiya!

I realize that my question would be best placed on the newsgroup "Ham-Space" however, I HAVE sent this post to that group and got no response. Every time I've had a question and sent it to this group, I always got a response that was helpful (thank you).

I was wondering about phase (MA) schedules for satellites. I have and get newly published keps data, but I need an up-to-date phase schedule so that I know when which satellites are operating in what modes and when. Any help would be appreciated.....Dave

>I am the original poster and the original question still stands. What can I do
>about it?

well, the first thing to consider doing is getting hold of books on interference solutions -- odds are the local library has a copy of "The ARRL Handbook for Radio Amateurs" AKA "The Radio Amateur's Handbook" - this has a section on interference problems along with steps taken at the transmitter end and some detail for other equipment.

many of the problems are sounding like fundamental overload. this is caused by your equipment not being able to reject the strong signals...it is conceivable that the CBer could even be operating legally.

there are filters you can add to your equipment and other methods used to keep the radio signals out of other equipment. the signals could be entering on an antenna, the power line, or directly into the other radio..

I'd say start with the telephone. AT&T has a filter for their phones...get the phone fixed up and then take the next one.

Source record: 258561

HI
I am a new ham and I am trying to
find a ground in an old house I am renting.

The outlets have only 2 wires going to them.
The water pipes are part PVC and part copper.

What I really want to know is there a way to
test the pipes and find one of them that is
grounded.

Thanks
Kenneth Wright KD4WNS
klw4k@virginia.edu

PS
Could some one please mail me the answers because
I don't always have the time to read news.

To all radio amateurs

SB QST ARL ARLB080
ARLB080 Hurricane net activated

HURRICANE WATCH NET ACTIVATED

Hurricane Rosa is approximately 220 miles off the coast of
Manzanillo, Mexico in the Pacific Ocean. It is presently packing 90
mile-per-hour winds as of 2000 UTC on October 13, 1994.

The Hurricane Watch Net has been activated on 14.325 MHz, according
to Assistant Net Manager Joe Schimmel, W2HPM. A clear frequency
would be appreciated. Please follow Net Control's direction when
checking into the net. The Hurricane Watch Net will stay in
operation until the storm makes landfall or moves 300 nautical miles
offshore.

: --

ok you blokes which net are you running on????

i got a message from one of you N5LJV to hop on #hamradio but there
was no one on the very _un_crowded undernet as opposed to the very
cramped EFNet that most of you are on. Look into the undernet and
find a server near you. you will enjoy actually being able to carry
out a conversation and not have to wait four hours for a reply only to
realize that you have been dropped because of a ping timeout usually
(here in the states) the undernet servers follow this pattern

<city>.<state>.<country>.undernet.org

you can get the current list of undernet servers via anonymous ftp
from
cs.bu.edu (it's actually cs-ftp.bu.edu)

check under /irc you see a file for the listing of undernet servers.

get it and look for the one closest to you

To all radio amateurs

SB DX ARL ARLD062
ARLD062 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Bob, W5KNE, Chod, VP2ML, Glenn, W6OTC, Joe, NJ1Q, the Ohio/Penn DX Bulletin, QRZ DX, The DX Bulletin, and the Contest Corral column from the pages of QST. Thanks.

SWAZILAND. Adam, SP2JYX, signs 3DA/SP2JYX and has been on 15 and 20 meters, most of the time on SSB. QSL via CBA.

RWANDA. Hartmut, 9X5HG, will be active until about October 22, at which time he plans on leaving Rwanda. Tips include 7001 kHz around 0300z and 14025 kHz around 2030z. QSL via the DL Bureau or to his home CBA.

THAILAND. Reiner, DL2VK, will be here for approximately 6 months. He will be signing HS0/DL2VK and plans to operate primarily CW. Some Packet, AmTOR, PacTOR and SSB may be in the works.

LAOS. Minoru, JA3MNP, should be on the air from the station of XW8KPL as XW3MNP October 20 to 27, including RTTY. QSL via PO Box 59, Kyotonishi 6165, Japan.

CAMBODIA. XU7VK has been on 3506 kHz at around 1316z.

SAUDI ARABIA. Mike, K3UOC, is now working in Riyadh. If plans to obtain a Saudi license fall through, he hopes to be able to operate 7Z1AB, the station at the U.S. Embassy.

NAURU. Teo, DJ1RL, and Harry, DL6NA, should be signing C2/ their call signs by the time this bulletin hits the airwaves. Teo is the CW op and Harry likes SSB. They will concentrate on the lower bands. Try 1827/1832 kHz. QSL via the DARC Bureau or their home calls. The following three entries are their planned itinerary after Nauru operations.

FIJI as 3D2AN and 3D2FT, October 17, 18 and 19.

SOUTH COOK ISLANDS as ZK1/ their home calls, October 19 to 22.

FRENCH POLYNESIA as FO/ their home calls, October 22 to 28.

SOMALIA. SM7CIP operates T5AR with a barefoot rig and low profile antennas. His QSLs will not be printed until early 1995, so please be patient. QSL via SM0DJZ.

SYRIA. Mike, VE3UWC, is with UN Peace-keeping forces here for about 3 more months. He signs VE3UWC/4U, though little is known of his operating habits other than to try 14220 kHz between 2130 and 2200z.

ETHIOPIA. Listen for ET3BT on the Family Hour Net at 14226.5 kHz around 2300z.

MACAO. Listen for Roger, G3SXW, and Nigel, G3TXF, around October 19 for a week of CW operating. Plans are to emphasize LF and WARC bands.

GUYANA. Listen for Eddie, G0AZT, and Glenn, W6OTC, operating RTTY as 8R1TT. Plans are to be in on the JARTS WW RTTY Contest this weekend. Check 80 through 10 meters before and after the contest. QSL via Eddie Schneider, POB 5194, Richmond, CA 94805.

ANGUILLA/SINT MAARTEN. Warren, WB1HBB, will be doing some operating while vacationing on these islands. He will sign VP2E/WB1HBB October 18 through 20, and PJ7/WB1HBB from October 21 through 28. Try 14263 kHz at 1230 and 2100z. QSL his home call.

COCOS ISLAND. TI2JJP should be on as TI9JJP October 20 to 29.

GUANTANAMO BAY. Larry, WB6VGI, will be signing KG4ML until October 21. Though 17 meters is his bread and butter, he has occasionally strayed to 30 and 40 meters. QSL via CBA.

QSL CORRECTION, or please use phonetics. Rick, AA6KS, reports that he is not, repeat not the QSL Manager for ZF8BS. The correct route is via AA6KX.

THIS WEEKEND ON THE RADIO. On the air operating events for October 15 and 16 include the Simulated Emergency Test, 36th Boy Scout Jamboree On The Air, aka JOTA, the JARTS WW RTTY Contest, QRP ARCI Fall CW QSO Party and the RSGB 21/28 MHz CW Contest. For rules and more information on these events, check pages 96 and 126 of September QST.

I seem to remember this same posting coming up 2 previous times over the last 4 years and the reaction is the same. Do we have a new group of people on this everytime the posting appears? I seem to recall the previous 2 times that it was found to be a fake. Is this time any different?

To all radio amateurs

SB SPCL ARL ARLX029
ARLX029 Boy Scout on the air

Boy Scouts on the air

The Boy Scouts Jamboree on the Air (JOTA) is October 15 and 16. In addition to K2BSA at Schiff Scout Reservation in New Jersey, Scouts are expected to operate stations from as many as nine other US camp sites, signing K2BSA/portable.

The DOVE satellite will contain a packet message of greetings to Scouts around the world, from the Boy Scouts of America.

On Friday evening, October 14, a net will begin at 0400 UTC (Saturday UTC) on 7290, conducted by K2BSA/7 at Bruneau Dunes State Park in Idaho. Guests there will include astronaut Jack Schmidt, the lieutenant governor of Idaho, and Scout executives.

JOTA is an international event with Scout stations participating from around the world. Suggested frequencies on CW are 3590, 7030, 14070, 18080, 21140, 24910, and 28190 kHz. Suggested SSB spots are 3740 and 3940, 7090 and 7290, 14290, 18140, 21360, 24960, 28990, and 28350 kHz.

Some DX call signs to look for are HB9S, JA1YSS, PA6JAM, 5Z4KSA, VK1BP, GB2GP, XE1ASM, and DU1BSP.

More information was in September QST, page 96.

>Anyone know where I might find that?

If you have access to World-Wide Web browsers, such as Mosaic, look at:

http://www.cc.columbia.edu/~fuat/cuarc/

At the bottom, choose "Callsign Servers" and you'll get a list of the
various ones I know about. Regular telnet ones such as
callsign.cs.buffalo.edu's port 2000 as well as the latest QRZ CD-ROM
from QRZ available via forms interface and the UK callbook from
mcc.ac.uk. Also a forms interface to the Hams on Usenet listing.

You can also go direct to:

http://www.cc.columbia.edu/~fuat/cuarc/callsign-servers.html

> for receiving?

Some consolation: when you build up your speed into the Extra-class range,
you may find that you can copy faster than you can send. Even with an
electronic keyer, I tend to be limited by my muscular response in sending,
and it's slower than I can copy, at least "head" copy.

Hang in there; it gets easier!

Well, did you see the feature in QST a few months back (July maybe?) on the LARC Mode S DXpedition to a Caribbean Island? Can't remember which one now. Maybe doing the article featuring the club was part of the agreement. They did mention the clubs charter in the last paragraph.

> Chicago and Baltimore.

Just a mere 6 years ago, saying "monitoring" would usually get a
response. Now, ir usually doesn't. I live in Ohio, and there exists a
wide area repeator "system" that spans from Cleveland on down into
Kentucky and over into Indiana. A few times, whenever i get a chance to
be in my car for more that a couple of minutes, I will announce that I am
"monitoring". I have yet to get a response.
What is it all coming to?

--
Tnx & 73,
Bob

The FCC gives a more formal definition of the Amateur Radio Service,
but you are probably looking for something you can say in front
of a group that may never have heard of it and may not have
a technical background.

Amateur Radio is a hobby, sometimes even an avocation, involving
radio communication between other Amateur Radio enthusiasts.
It is called 'Amateur' Radio because the radio communication
that takes place cannot be done in exchange for compensation,
monetary or otherwise. The purpose of Amateur Radio is simply
personal fulfillment, as well as to advance the radio 'art',
foster international goodwill, help by volunteering radio
communication services during emergencies, increase
the numbers of licensed amateur radio operators, and to
provide a means of technical advancement in the areas
of radio and electronics. That last sentence was a rough
interpretation of the FCC charter for amateur radio.

Above all though, it's for the fun of communicating with others.

Mike

1) Amateur radio is a hobby.
2) Amateur radio is fun.
3) Amateur radio is a learning and growing experience.
4) Amateur radio is, by its name, *NOT FOR PROFIT*.
5) Amateur radio fosters good will and service to others.
6) Amateur radio promotes brotherhood (or should I say "personhood").
7) Amateur radio is continually pioneering into new technology while not
forgetting the past.
8) Amateur radio is "for me".

SB NEWS @ AMSAT $SPC1017
* SpaceNews 17-Oct-94 *

BID: $SPC1017

=========
SpaceNews
=========

MONDAY OCTOBER 17, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited free distribution.

* KEPLERIAN DATA AVAILABLE*
============================
The most current orbital elements from the NORAD two-line element sets are carried on the Celestial BBS, +1.205.409.9280, and are updated daily (when possible). Documentation and tracking software are also available on this system. The Celestial BBS may be accessed 24 hours/day at 300, 1200, 2400, 4800, or 9600 bps using 8 data bits, 1 stop bit, no parity.

Element sets (also updated daily), shuttle elements, and some documentation and software are also available via anonymous ftp from archive.afit.af.mil (129.92.1.66) in the directory pub/space.

[Info via Dr. Thomas S. Kelso]

* SPACE RADAR IMAGES AVAILABLE *
================================
Several images of Earth from the Spaceborne Imaging Radar-C/X-Band Synthetic Aperture Radar (SIR-C/X-SAR) instrument flying on space shuttle Endeavour on the recent STS-68 mission are available at the Jet Propulsion Laboratory's electronic access site.

The images are:

Chernobyl, Ukraine: P-44705
SC-CHERN.GIF 167K
P44705.JPG 1235K

Kliuchevskoi Volcano, Kamchatka, Russia: P-44707
SC-KLIUC.GIF 122K
P44707.JPG 3147K

Mt. Rainier, Washington State, USA: P-44703
SC-RAINI.GIF 276K
P44703.JPG 2879K

In addition, the following recently released image from SIR-C/X-SAR's flight 1 in April 1994 is also available at the site:

Silk Road, China: P-44535
SC-SILK.GIF 88K
P44545.JPG 905K

By World Wide Web over Internet, the images may be accessed from JPL's home page, http://www.jpl.nasa.gov/, under the heading "News flashes."

They may also be accessed by anonymous file transfer protocol (ftp) to jplinfo.jpl.nasa.gov. The GIF browse files are in the `news' directory, while the JPEG full-resolution files are in the `sircxsar/images' directory.

The site may also be accessed by dialup modem at +1 (818) 354-1333, up to 14,400 bps, N-8-1. The GIF browse files are in the NEWS library, while the JPEG full-resolution files are in the SIRCXSAR library.

Hardcopy photographic prints of these images may be ordered by quoting the "P-" file number from the following vendor:

Newell Color Lab
221 N. Westmoreland Avenue
Los Angeles, CA 90064
USA
telephone +1 (213) 380-2980
fax +1 (213) 739-6984

[Info via JPL]

* MAGELLAN MISSION ENDS *
==========
The successful five-and-a-half-year mission of NASA's Magellan spacecraft to map the surface and measure the gravity of Venus ended on 12-Oct-94 when ground controllers lost contact with the spacecraft. Magellan was expected to burn up in the planet's upper atmosphere within two days of the lost of signal.

The final chapter of the Magellan story was written as Earth-based tracking stations lost the spacecraft's radio signal at 10:02 Universal Time (3:02 AM Pacific Daylight Time). The loss of signal, which was anticipated, was due to low power on the spacecraft, exacerbated by Magellan's orientation as it performed a final experiment in the upper atmosphere of Venus.

The spacecraft's thrusters were fired in four sequences on Tuesday, 11-Oct, to lower Magellan's orbit into the thin upper atmosphere and set up the final experiment, before the spacecraft's failing power system or dynamic forces and friction from the Venusian atmosphere shut off communication.

Magellan gathered scientific data on the planet's upper atmosphere, including aerodynamic interactions with it during the spacecraft's final descent, by orienting its wing-like solar panels in opposite directions, like a windmill. The termination experiment was an extension of the windmill experiment performed in early September. It was carried out as the spacecraft was within weeks, if not days, of the end of its useful life

due to expected decreases in solar power output from the thermal stress produced by more than 15,000 orbits of Venus.

Launched in May 1989, Magellan entered Venus orbit in August 1990 and gathered data for over four years. The mission exceeded all of the objectives defined for its exploration of Venus. It used radar to map 98 percent of the planet's cloud-covered surface to an average resolution of better than 300 meters and compiled a high-resolution, comprehensive gravity field map for 95 percent of the planet. The gravity data will allow scientists to see "underneath the planet's skin" and compare that knowledge of the interior to the wealth of surface features revealed by Magellan's radar imaging, said Project Manager Doug Griffith at NASA's Jet Propulsion Laboratory (JPL), Pasadena, California.

Magellan also performed a first-of-a-kind "aerobraking" maneuver by dipping into the atmosphere to reshape its orbit. This technique is now being used in the design of the Mars Glal Surveyor mission to enable the spacecraft to enter orbit around the planet Mars in 1997 using less fuel, resulting in significant savings of weight and cost.

"The Magellan mission to Venus has been successful beyond all expectations," said JPL Director Dr. Edward C. Stone. "It not only fulfilled its science and mission objectives, it also demonstrated innovative technologies for future missions."

Yes, it appears to be different.

The evening of Thursday, 13 October 1994, I had a short conversation (in
person) with ARRL Midwest Division Director Lew Gordon, K4VX.

He mentioned in passing that ARRL had settled its differences with the
Lambda Radio Club. He gave no further information.

Last and FINAL TRY!! This is try #5! I've never had this much
trouble posting to a newsgroup before. Someone out there doesn't want me
to post this!

Hi! I'm Christy trying to find someone in my area to help keep
me track on studying my license. I am studying for my Novice and
Technician license and keep getting side tracked with the overwhelming
things I need to do!

x I'm presnetly studying "Now You're Talking" and also have a good
suppliment electronics book. I like the watered down version because
after 10 years of consense scientific text books from college (biology,
chmistry and and forgot all my physics) I like watered down versions.

If anyone out there haves some great tips to keepx{ me on track,
let me know....also, if you read this, that means I've succeeded! UG!

756. Question about FM receiver noise

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-14 19:20:13 UTC
From: harris.pander01@ic1d.harris.com
Message-ID: <harris.pander01.10.2E9ED9EA@ic1d.harris.com>
Source record: 258507

I have two FM receivers, of different designs, which exhibit similar problems; one does it intermittently, and the other always.

If there's no RF input, the audio is always on (no squelching action). When there is an RF input, the receivers quiet and the audio sounds fine. When the problem is present, no adjustment of the squelch control will activate the squelch. On the intermittent receiver, which happens to be in the car, the noise takes the form of impulse noise whenever the ignition is on.

All this leads me to surmise that there's not enough signal into the discriminators to allow limiting to occur (hence the AM noise in the car), so I should be looking for the cause of low IF signals into the disciminators. Can anybody confirm that discriminators without amplitude-limited input levels produce unsquelchable noise on their outputs? (BTW, both receivers use high-audio-frequency (above 3 kHz) noise-operated squelches.)

758. Duplexer Theory

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-14 19:31:11 UTC
From: ip@g8sjp.demon.co.uk
Message-ID: <782163071snz@g8sjp.demon.co.uk>
Source record: 258557

Don't get all excited, folks! This isn't yet another question about the design and manufacturing of cavity filters. Nope.

What I'm interested in is the theory behind the hybrid ring circuit which one sees published from time to time. The one I'm looking at right now is in the 1989 ARRL Handbook ....

I'm sure that some genius or other out there in NetLand (tm) has the answers to the following questions, and I'd be obliged if they could be shared with me :-)

1. The coax specified is RG-8; this seems to be directly at odds with everything else one is told about using efficiently shielded cable for duplexer construction. Should I attempt to build one of these, I'd rather use LDF4-50 (mainly because I have a lot of it, and the connectors are 'the right price'. Anything wrong with this as a concept (providing, of course, the correct velocity factor is applied to the length calculations)?

2. Are the cable lengths between each ring and the TX / RX critical? If so, what should they be (in relative terms)?

3. Are the cable lengths between each ring and the commoned 'T' connector for the antenna critical? Again, if these are critical, how should one calculate the required length?

4. What (in relative terms) should be the length for the tuning stubs? And with the next part of this question, you'll begin to get a sense of my lack of understanding of the circuit. Should these be OPEN or SHORT circuit stubs?

5. For a correctly assembled duplexer as described, what TX / RX isolation could be reasonably expected for this design?

Thanks for listening :-)

I have TWO Heathkit H-89 (factory built) computers. These are Z80 based machines built into a 'smart' 25 line addressable terminal. These are 1980 vintage, are compatible only with themselves! Both have built-in floppy drives, no hard-drives, run on a DOS system. If nothing else, the termials can be used to logon to other machines!

If you are into HAM radio, these would make an excellent choice for a dedicated PACKET host! XYL says these MUST GO! Make an offer!

>each other. Do they manage to get the orders right? (Who's
>listening to them on 35.02, and who do they listen to on
>154.6?)

Believe it on not, they have a *repeater*. With a wire-line
tie-in, no less. From listening on the 154 MHz output, here's
what I *think* happens:

154 MHz "downlink" is on the air all the time.

Customer driving up to menu board causes menu
board speaker audio to be patched into 154 MHz
downlink.

Clerk keys up 35 MHz (?) xmtr on his/her belt and
greets customer. 35 MHz signal turns around menu
board speaker and retransmits clerk's audio on 154 MHz.

I remember the communication being half-duplex, but
that could be wrong. All they have to do is prevent
audio feedback in the clerk's headset to get a
full-duplex system.

As a final note, just in case it crossed your mind to
call in your order by radio with your slightly modified
2-meter rig: Don't. It has already been done with
accompanying NAL's and license revocations.

Source record: 258571

Hello,

I have set up FBB with a permanent line for the phone modem and am
having some difficulties...

I originally set it up for temporary use, ie: people call me and I
would plug it in. Of course, I had them set up for a password and just set
the port.sys file for Normal Mode. It worked well...

Now that it has it's own line, I would like to get the Guest part
working so people can call it up without me giving them a password. I want
them to be restricted to sending messages to me only and downloading files
until I give them full access. However, when I set the port to guest, users
can stlil call in and gateway before I give permission. I am getting confused
between port.sys and init.srv for first connect mask.. Any help you can give
me would be appreciated...

Thanks!

Solar flux was up about 11 points over the previous week.
Conditions were unstable, with several days of high A index, and the
K index at four and five on many occasions. The instability is due
to radiation from recurring coronal holes. Conditions should
stabilize somewhat after this weekend, but could become poor again
around October 23 and 24 and again at the end of the month, with the
worst conditions centered around October 30. All of these
predictions are based on observation of the previous solar rotation.
Because the Sun rotates relative to the Earth every twenty seven and
one half days, areas producing difficult conditions are forecast
based upon what was observed about four weeks earlier.

Expect solar flux to gradually drop over the next couple of weeks,
and then rise back to the current level during the beginning of
November.

Sunspot Numbers for October 6 through 12 were 78, 79, 65, 73, 70, 73
and 71, with a mean of 72.7. 10.7 cm flux was 84.2, 83.8, 86.1, 87,
86.9, 87.6 and 88.1, with a mean of 86.2.

The path projection for this week is from Clinton, Oklahoma to
Brazil.

80 meters should be open from 2345 to 0930z, and 40 meters from
2300 to 1015. 30 meters looks good from 2200 to 0800, and again
around 0930 to 1030. Check 20 meters around 1400 to 1500 and
again from 1900 to 0100. 17 meters should be open from 1500 to
2300, and 15 meters from 1600 to 2200. On many days 12 meters may
be open around 1800 to 2000, and on some days it may open an hour
earlier and close an hour later. On a few days 10 meters may be
open over the same period.

>There was a time when this was a small world and everyone waved as the
>passed each other.

Yes, and people never locked their doors at night, left their keys in their cars, sat on their front porches, enjoyed the passing parade, and felt safe. Only in the huge disarmed rat warrens like NYC were people frightened, barricading themselves in their hives, avoiding eye contact on the street, starting at shadows, rude to strangers, etc. That attitude is now becoming common even in some small towns and rural areas. But it really isn't any more dangerous out there than it was 30 years ago (somewhat safer in fact for most of us, according to the FBI UCR).

We've become a frightened people. Scared of AIDs, scared of radiation from power lines, scared of nuclear power, scared of Alar, scared of 24D, scared of global warming, scared of ozone holes, and scared of crime. We're afraid to drive without seatbelts and airbags. We're terrified someone may drive at the design speed of our highways so we attempt to enforce ludicrous speed limits. We're afraid to eat red meat. We're worried about the fate of some horned toad or snail darter more than we are about the fate of people. Etc, etc, etc.

Yes, we've changed. Most of us have become cowering rabbits starting at invisible terrors, mostly of our own imaginings. We've become insular and withdrawn, afraid of contact with others. We cower inside and watch the lies and exaggerations of a pandering glass box instead of going out and living our lives to the fullest. We've lost our confidence, and we've lost our nerve.

>There was a time in the day of the crystal-controlled vhf transceiver, (less
>than 20 years ago) when a "monitoring" on a repeater would get a reply in

>In 1994 we have astounding technological devices that will transmit and
>receive anywhere in modes that were not imagined in the 70's.
>
>At the same time as our gear has become sophisticated, we have regressed
>in our friendliness and common courtesy.

Yes, we're withdrawn and xenophobic. We think speaking nicely to some stranger may make us a victim. We must huddle only with our close clan, using the "locks" of closed repeaters to enforce our wariness of strangers. Once, a stranger was just a friend we hadn't met yet. Now a stranger is a potential threat to be avoided.

>It seems as if the humans are failing.

Sadly true. We've lost our confidence, and a pandering government and press feed our fears. Frightened people aren't friendly welcoming people. Many use anger and hostility to mask their fears. Others turn to authority (any authority) to save them from themselves.

Amateur radio is a group of volunteer non-commercial activities related
to each other by the use of radio waves. It's a place for exploration
and experimentation. It's a place for self-instruction. It's a place
for public service. It's a place to meet new and interesting people.
It's a place for fun.

Gary

Charlie:

I hope you speak better than you type. My definition of Amateur Radio
is
a radio service of folks who teach themselves, enlist and train others,
and experiment to improve the technical art of radio. There are lots of
things you can add to that, but the more you add, the more confusing it
becomes.

For your speech, distill it down to a simple sentence or two; no
compound or complex sentences, please! If you miss a lot, don't worry.
Just pick those items that fit with the rest of your speech, and perhaps
drop in somewhere that Amateur Radio continuously evolves, just like
language does. In that respect, it comes closer to being all things to
all people than any other technical hobby does.

771. TCP/IP Packet Using Commercial Software?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-15 01:08:20 UTC
From: davesparks@delphi.com
Message-ID: <9410142103591.DLITE.davesparks@delphi.com>
Source record: 258562

Is it possible to work packet in TCP/IP mode with a commercial TCP/IP package, like "Chameleon", or is special ham software required? I realize that there are at least two shareware and public domain implementations available for hams, but if someone already has the commercial version, can he/she use that instead?

If it's possible, has anyone out there done it?

Hows does LIDAR calculate speed? I thought Laser Doppler Radar uses DOPPLER
Doesen't the unit have to transmit a burst of light, pick it up on a
photodetector, and calculate the time it took? And then try again calculate the
diffrence.

773. What type of antenna needed?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-15 04:11:54 UTC
From: sam <sjm822@delphi.com>
Message-ID: <pG42J-y.sjm822@delphi.com>
Source record: 258526

I'm posting this for a friend, hope I get it right. He needs to know "what type of antenna is needed for the top of a concrete 12 story intercity building. He will only have access to traditional coax for regular off-air TV reception. Then could he use a splitter so he wouldn't lose TV reception?"

Thanks in advance for any help on this. You can E-Mail your reply, if you choose. My address is:
SJM822@Delphi.com

Thanks again,

Sam

774. IC-W21A HELP

hello...i am considering upgrading my 2-meter equipment...
i currently use a kenwood 2500 (circa 1982, i evelieve).
saw an ad for an ICOM IC-W21A on sale. i looked
through over two years of qst's for a review or
specifications...but found different. i did find
some sililar-sounding models (e.gh IC-W21AT) but
the specific model number i'm considering is the
W21A. I WOULD greatly appreciate any
comments, criticisms, observations you have on
this unit. specifically, would you buy/use
it again. i find the subjective comments of hams
much more valuable than those found in the
trades. i promose to acknowledge all replies.
pse post here, or to my e-mail address below.
thanks! jim/kd0lb

Hi,
I am looking for info about SFU455 ceramic filters. I have some SFU455A and
SFU455B that I plan use, if it possible, in 9600/19200 designing packet rig.

It will be well to know the next parameters:
- 6 db bandwidth
- 50 db bandwidth
- attenuation
- insertion loss
- input/output impedance
- group delay time.

Thanks in advance.

> Rick Gaus
> WA3INC

Try sending an e-mail to:

qsl-info@aug3.augsburg.edu

There should be a blank subject and in the body of the message put the
call sign you are looking up. You should get an e-mail reply to your query
rather quickly. I tested it this morning and the response was within seconds.

You give the 14/1200 UTC position and the ARRL gave the 13/2000 UTC
position. The ARRL bulletin didn't say what time the net was activated,
did it? That net might have been on for quite some time prior to the
bulletin posting.

782. Sound Operated Phones

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-15 19:11:40 UTC
From: jmollan@egreen.iclnet.org
Message-ID: <1994Oct15.191140.5782@egreen.wednet.edu>
Source record: 258436

Recently I have read several books about the US Navy in WWII using sound-operated phone systems.

How do these systems operate? What is the electronic theory behnd it?

73,
John

>Just curious and considering on getting a licence,

California to Europe on 20 watts is a challenge, but certainly is possible -- especially with a decent antenna at the higher frequencies. In fact, I know someone (or at least talked to them on the radio once) who had worked New Zealand from a hotel room in Virginia with a dipole strung around the ceiling of the room and using only 5 watts! You're not going to do that very often, but lots of things are possible -- in fact, seeing what's possible is what is often the most fun in amateur radio.

I've worked all over the world -- including the west coast of Australia, which is almost exactly half-way around the world from here -- with never using more than 100 watts and very mediocre antennas.

Unfortunately, we're getting to the bottom of the sunspot cycle, so some of the really spectacular propagation on the 10 meter band (28 MHz) of a few years ago is over for another few years (for example, I once listened to a guy in Guam working a friend of his at Guantanamo Bay with only 5 watts, and he was perfectly copyable), but you can still do very well on some of the other bands. Generally, power levels are more of a factor on the lower bands where there is more absorption of the radio waves, and generally you can communicate further with Morse Code than voice, but neither of these are hard-and-fast rules. In fact, my furthest contact (the one with western Australia) was on voice at about 3.8 MHz.

Good luck. It's a great hobby!

>nice too. I'd appreciate any advice but keep it simple because

If you've got one reasonably tall tree and a couple of shorter vertical surfaces to use for support, I don't think I'd go with a vertical at all.

I have a Cushcraft AP-8 that I rarely use now that I put up an inverted V. The peak of the inverted V is only about 30 feet up, and the ends are maybe 15 feet, but it consistenly gets better signal reports than the vertical. I feed it with ladder line through a tuner, and while it's cut for 80 meters, I use it on everything from 160-10 meters. It's far from an ideal 160 meter antenna, but I did work between 30 and 40 states during last winter's 160 meter contest (including all the west coast states), plus a handful of countries (although none outside the western hemisphere, unfortunately).

It also isn't great on 10-20 meters, but I do have about 150 countries worked with it, with pretty limited operating time. It kills the vertical on 40 and 80 though, including on DX. If I could put down an ideal ground system for the vertical, that might not be the case, but in order to get the vertical a reasonable distance away from a power line, I had to place it pretty close to the property line, so that most of the ground system is to one side. However, that side is toward the northeast, and the inverted V CONSISTENTLY gets signal reports from Europe that are 1-2 S units better than the vertical.

I am planning a trip to Savannah, GA in the near future, and was
wondering what popular 2m, 220, and 70cm repeaters I should monitor.

Also, what is the Skywarn frequency in case of nasty weather?

Finally, repeaters are homes to any popular nets?

Thanks much.

73,
Scott

I can think of three sources: HP (probably expensive),
Tucker Electronics (800) 527-4642 (maybe expensive, but less than HP),
and Ed Matsuda (619 479-0225. Oh yes, there's one more:
Manuals Plus (206) 531-8031. Hope this helps!

USING AND UNDERSTANDING DECIBELS

by

Paul H. Bock, Jr. K4MSG

Author's Note: This tutorial was originally written for the use of non-RF/analog engineers (digital, software) and non-engineers who needed an easy-to-follow reference on the general use of the decibel. I hope that some amateur operators may find it useful as well.

While the historical accuracy of the comments relating to the telephone company and telephone company engineers may be open to question (the information as supplied to me was anecdotal), the technical points made should be valid regardless of the exact turn of history.

General

The decibel, or dB, is a means of expressing either the gain of an active device (such as an amplifier) or the loss in a passive device (such as an attenuator or length of cable). The decibel was developed by the telephone company to conveniently express the gain or loss in telephone transmission systems. The decibel is best understood by first discussing the rationale for its development.

If we have two cascaded amplifiers as shown below, with power gain factors A1 and A2 as indicted, the total gain is the product of the individual gains, or A1 x A2.

Input >-------- Amp #1 --------- Amp #2 ------> Output

A1 = 275 A2 = 55

In the example, the total gain factor At = 275 x 55 = 15,125. Now, imagine for a moment what it would be like to calculate the total gain of a string of amplifiers. It would be a cumbersome task at best, and especially so if there were portions of the cascade which were lossy and reduced the total gain, thereby requiring division as well as multiplication.

It was for the reason stated above that Bell Telephone developed the decibel. Thinking back to the rules for logarithms, we recall that rather than multiplying two numbers we can add their logarithms and then take the antilogarithm of this sum to find the product we would have gotten had we multiplied the two numbers. Mathematically,

log (A x B) = log A + log B

If we want to divide one number into another, we subtract the logarithm of the divisor from the logarithm of the dividend, or in other words
log (A/B) = log A - log B

The telephone company decided that it might be convenient to handle gains and losses this way, so they invented a unit of gain measurement called a "Bel," named after Alexander Graham Bell. They defined the Bel as

Gain in Bels = log A

where A = Power amplification factor

Going back to our example, we find that log 275 = 2.439 and log 55 = 1.740, so the total gain in our cascade is

2.439 + 1.74 = 4.179 Bels

It quickly occurred to the telephone company engineers that using Bels meant they would be working to at least two decimal places. They couldn't just round things off to one decimal place, since 4.179 bels is a power gain of 15,101 while 4.2 bels is a power gain of 15,849, yielding an error of about 5%. At that point it was decided to express power gain in units which were equal to one-tenth of a Bel, or in deci-Bels. This simply meant that the gain in Bels would be multiplied by 10, since there would be ten times more decibels than Bels. This changes the formula to

Gain in decibels (dB) = 10 log A (Eq. 1)

Again using our example, the gain in the cascade is now

24.39 + 17.40 = 41.79 decibels

The answer above is accurate, convenient to work with, and can be rounded off to the first decimal place will little loss in accuracy; 41.79 dB is a power gain of 15,101, while 41.8 dB is a power gain of 15,136, so the error is only 0.23%.

What if the power gain factor is less than one, indicating an actual power loss? The calculation is performed as shown above using Equation 1, but the result will be different. Suppose we have a device whose power gain factor is 0.25, which means that it only outputs one-fourth of the power fed into it? Using Equation 1, we find
G = 10 log (0.25)

G = 10 (-0.60)

G = -6.0 dB

The minus sign occurs because the logarithm of any number less than 1 is always negative. This is convenient, since a power loss expressed in dB will always be negative.

There are two common methods of using the decibel. The first is to express a known power gain factor in dB, as just described. The second is to determine the power gain factor and convert it to dB, which can all be done in one calculation. The formula for this operation is as follows:

$$G = 10 \log \frac{Po}{Pi} \quad \text{(Eq. 2)}$$

where G = Gain in dB
Po = Power output from the device
Pi = Power input to the device

Both Po and Pi should be in the same units; i.e., watts, milliwatts, etc. Note that Equation 2 deals with power, not voltage or current; these are handled differently when converted to dB, and are not relevant to this discussion. Below are two examples of the correct application of Equation 2:

Ex. 1: An amplifier supplies 3.5 watts of output with an input of 20 milliwatts. What is the gain in dB?

$$G = 10 \log \frac{3.5 \text{ watts}}{0.02 \text{ watts}}$$

$$G = 10 \log (175)$$

$$G = 10 (2.24)$$

$$G = 22.4 \text{ dB}$$

Ex. 2: A length of coaxial transmission line is being fed with 150 watts from a transmitter, but the power measured at the output end of the line is only 112 watts. What is the line loss in dB?

$$G = 10 \log \frac{112 \text{ watts}}{150 \text{ watts}}$$

$$G = 10 \log 0.747$$

$$G = 10 (-0.127)$$

$$G = -1.27 \text{ dB}$$

Non-relative (Absolute) Uses of the Decibel

The most common non-relative, or absolute, use of the decibel is the dBm, or decibel relative to one milliwatt. It is different from the dB because it represents, in physical terms, an absolute

amount of power which can be measured.

The difference between "relative" and "absolute" can be understood easily by considering temperature. For example, if I say that it is "20 degrees colder now than it was this morning," it's a relative measurement; unless the listener knows how cold it was this morning, it doesn't mean anything in absolute terms. If, however, I say, "It was 20 degrees C this morning, but it's 20 degrees colder now," then the listener knows exactly what is meant; it is now 0 degrees C. This can be measured on a thermometer and is referenced to an absolute temperature scale.

So it is with dB and dBm. A dB is merely a relative measurement, while a dBm is referenced to an absolute quantity: the milliwatt (1/1000 of a watt). We can apply this concept to Equation 1 as follows:

dBm = 10 log (P) (1000 mW/watt)

where dBm = Power in dB referenced to 1 milliwatt
P = Power in watts

For example, take the case where we have a power level of 1 milliwatt:

dBm = 10 log (0.001 watt) (1000 mW/watt)

dBm = 10 log (1)

dBm = 10 (0)

dBm = 0

Thus, we see that a power level of 1 milliwatt is 0 dBm. This makes sense intuitively, since our reference power level is also 1 milliwatt. If the power level was 1 watt, however, we find that

dBm = 10 log (1 watt) (1000 mW/watt)

dBm = 10 (3)

dBm = 30

The dBm can also be negative, just like the dB; if our power level is 1 microwatt, we find that

dBm = 10 log (1 x 10E-6 watt) (1000 mW/watt)

dBm = -30 dBm

Since the dBm is an absolute amount of power, it can be converted back to watts if desired. Since it is in logarithmic form it may also be conveniently combined with other dB terms, making system analysis easier. For example, suppose we have a signal source with an output power of -70 dBm, which we wish to connect to an amplifier having 22 dB gain through a cable having

8.5 dB loss. What is the output level from the amplifier? To find the answer, we just add the gains and losses as follows:

Output = -70 dBm + 22 dB + (-8.5 dB)

Output = -70 dBm + 22 dB - 8.5 dB

Output = -56.5 dBm

As a final note, power level may be referenced to other quantities and expressed in dB form. Below are some examples:

dBW = Power level referenced to 1 watt

dBk = Power level referenced to 1 kilowatt (1000 watts)

One other common usage is dBc, which is a relative term like dB alone. It means "dB referenced to a carrier level" and is most commonly seen in receiver specifications regarding spurious signals or images. For example, "Spurious signals shall not exceed -50 dBc" means that spurious signals will always be at least 50 dB less than some specified carrier level present (which could mean "50 dB less than the desired signal").

:
: Sure! Obstruction of justice, interference with a police officer...
:
: I don't claim that using a laser jammer results in a violation of those
: laws, but I'm sure a cop might someday, at which point it is up to the
: judge. Good luck.

Yes, it does violate those laws. Otherwise, radar jammers would be legal,
and sold as consumer products.

orion1@iastate.edu (Alex Orion Leu) writes:
:
: 3. Laser was invented for the patrol because of two reasons. First, it is
: tougher to detect because it diffuses very fast and doesn't carry the
: signature that sets many K or X radar detectors off. Second, it gives a
: much stronger signal as compared to K or X. With old radar it is very tough
: to get small vehicles on radar, unless they go very fast.

This whole paragraph is silly. The primary reason for lasar time and distance measuring equipment (there is no such thing as lasar radar - at least, not yet) is that it does NOT diffuse anywhere near as rapidly as radar. That is a characteristic of coherent waves. It can easily be aimed at One target, so there is no confusion over which vehicle is being clocked.

Because the energy density of the signal striking the vehicle is higher, it returns a stronger signal.

The last bit about clocking small vehicles is also false. You can use a handheld radar to clock baseballs - which are a lot smaller and not nearly as good a target as even the smallest motor vehicle.

: 4. A new brand of Canadian radar now comes with a detector that hunts out
: jammers. It is available in the U.S. and it does detect laser radar
: jammers(I have only seen ads). There are also detectors that detect these
: detectors. Be advised that if you are caught with a jammer not only do you
: face a stiff state fine but you may be prosectuted under the federal code
: which is 5 yrs. and $10k. In Iowa it is a simple misdemeanor(30 days and/or
: $150 fine). I can promise if you are caught by an officer plan on getting a
: ticket and a possible vehicle inspection and impoundment to determine if
: there are any other devices in you vehicle(Yes, it is all legal).

This is correct. You can be charged with obstruction of justice, interfering with an officer in the performance of his duties, malicious hindering etc. They do not even have to mess with wimpy jammer laws.

: 6. Police motorcycles also have permanent mounts and the handhelds have a
: holster on the bike. Most motor officers know better than to place the unit
: between their legs because it may side out and get caught on the bike or
: destroy the radar unit and the last thing an officer needs is to get tangled
: in his radar unit.

Or get tangled in the wheels or chain, and cause the officer all sorts of grief. Thanks for reinforcing my point.

Bill

IC> Hello there Name is Charlie N0XFD, I'm doing a speech for a class of
IC>mine and the topic is Ham Radio, What else. The bases of it is tell people
IC>just what it is. So I ask you Please send me your Definition of Ham Radio no
IC>mater what lenght to:
IC> CMATTHEW@WPO.UWSUPER.EDU

In our household there are three lincensed hams myself kd6lbn and 2 yls
kd6lzo and kd6kpj. Our definition of hamradio is as follows.

a group of old dinosours
no help for beginners. In fact beginners are not really welcome in the
local arrl club.
A national organization (arrl) that behaves as thou they have a mandate
of the hams in the USA but with just a little over 25% membership they
don't.
A national organization (arrl) that totally is refusing to move in to
the 21st century and hopes to keep ham radion in the time frame of 1930
to 1960.

And if you think this is a joke your had ought to listen to our local
nets and see that of the younger members trying to check in and how many
of them are recognize unless they are part of the local klick.

You ought to see what happens when a new commer joins the club and asks
for help. You might as well walk away and save you breath for asking for
help is a waste of time.

The following is a QST

The FCC says no to morse code exemptions for the elderly and
the ARRL announces some election winners. These stories and more
on Newsline report number 896 coming your way right now!

(*****
ELDERLY REFUSAL

The FCC says no a petition that proposed exemptions from Morse
code exams for people age 65 and older.
The petition to change the rules was filed by Guy A. Matzinger,
KB7PNQ. Matzinger is a 67-year-old Technician class licensee
from Cheney, Washington. In his petition Matzinger argued that
old age results in diminished faculties. He even equated people
65 and older with the severely disabled in terms of passing a CW
exam.
To back up his claim, Matzinger introduced the results of a
survey he conducted that said 63 percent of those he contacted
supported an exemption for speeds above 5 WPM for anyone over age
65.

But in turning away Matzingers' request the FCC says that the survey was flawed. It notes that the study provided only a statistical age profile of those contacted but did not say how many people were actually surveyed.
The FCC says that similar petitions have been denied in the past. This is because the current Amateur Radio license structure is based on the desires of the amateur service community and on the thousands of comments it received on previous petitions.
The Commission also notes that its rules already provide for Morse code exemptions for candidates with certain recognized disabilities. It adds that the Matzinger petition got the usual public notice, but says it received no comments at all on this regulatory change request.

(*****
CONGRESS ACTS TO SUPPORT HAM RADIO

A joint congressional resolution supporting Amateur Radio was successfully passed through both houses of Congress in the wee hours of the morning of October 7. The bill asks for "reasonable accommodation" in the operation of Amateur Radio in homes, automobiles and public places.
It was a last ditch effort by Senators Charles Robb, Wendell Ford and Alan Simpson to make Senate Joint Resolution 90 a reality. The bill passed on the floor of the Senate under unanimous consent at 12:10 AM. It then went to the House of Representatives. There it was brought up by Congressman Al Swift and passed unanimously at 2:45 AM. Patricia Spurlock, a staffer for Senator Robb, and Stephanie Vance, a staffer for Congressman Mike Kreidler, worked overtime on the bill. You may remember that it was Kreidler introduced the original House version.
Passage was assisted by the efforts of David Leach, counsel to the House Energy Commerce Committee, along with Jerry Waldron and Colin Crowell of the House Telecommunication and Finance Subcommittee.
Not since the days when Barry Goldwater, K7UGA served in the senate has Amateur Radio seen this kind of support from Capitol Hill.

(*****
ARRL WINNERS

ARRL Directors and Vice Directors have been elected or re-elected by acclimation in several league divisions. This happens when only one person was nominated and eligible. At this point the Elections Committee declared that candidate elected.
Those running unopposed this year and elected included Hudson Division Director Steve Mendelsohn, WA2DHF and Vice Director Paul Vydareny WB2VUK; New England Division Director Bill Burden WB1BRE and Vice Director Warren Rothberg WB1HBB; Rocky Mountain Division Vice Director Walt Stinson W0CP; Southwestern Division

Director Fried Heyn WA6WZO and Vice Director Art Goddard W6XD.
Finally, in the West Gulf Division Tom Comstock N5TC was
re-elected as Director and former Director and ARRL Vice President
Jim Haynie, WB5JBP comes in as the new West Gulf Vice Director.
There were several divisions with contested elections.
Ballots have been mailed to ARRL members in those divisions where
a vote to decide the winners is required.

(*****
TASMA'S RADUS STEPPING DOWN

Out on the west coast, Attorney Sidney Radus, N6OMS, the
current chairman of the Two Meter Area Spectrum Management
Association of Southern California says that he will not stand for
reelection. He blames a mis-information campaign as his reason
to step aside.
In a letter to the TASMA membership and faxed to Newsline,
Radus says that someone has been putting out information that the
now defunct $10 a year contribution was a mandatory database
maintenance fee. He says that it was his understanding that
payment was voluntary and intended to fund the work of the groups
Interference Committee.
According to Radus, much dis-information has been floated on
packet radio, on the Prodigy system, on America OnLine and in the
ham press regarding the purpose of the ten dollar donation. And,
while N6OMS stops short of naming names, he does say that there
are apparently some people who are -- and we quote --- "who are
attempting to generate a self fulfilling prophecy and stir up more
turmoil and trouble" -- end quote.
Radus says that he cannot condone and will not be a party to
obtaining money under false pretense. For that reason he says that
he has decided not to seek reelection as TASMA chairman.

(*****
AT&T FORMS TEAM TO TRACK HACKERS

AT&T Corp.'s Global Business Communications Systems says that
it has formed an investigative unit to monitor, track and catch
phone-system hackers in the act of committing toll fraud. The
unit will profile hacker activity and initiate "electronic
stakeouts" with its business communications equipment customers in
cooperation with law enforcement agencies, and work with them to
prosecute the thieves. The company says that its goal is not only
to defend against hackers but to get them off the street."

RAY BRIEM SHOW - HAM RADIO SPECIAL

Hi. I'm Ray Brien, N6FFT. As many of you know, for the past
thirty years I have hosted an all night talk show on radio station
KABC in Los Angeles. And for the past several years I have
devoted at least one night a year to talk about one of my favorite

subjects, ham radio.
Well, at the end of the year I plan to retire. Before I do I want to hold one more Ray Briem Ham Radio Special. We plan to have some of the best known ham radio operators with us in the studio. Others worldwide will join in by telephone.
It's an all star ham radio line up to big to list here, but I will tell you that you won't be disappointed.
I've chosen Saturday morning October the 29th for this special event. We start at 5 minutes after midnight and go till 5 in the morning. The nighttime signal of our powerful 5000 watt KABC transmitter means that many of you should be able to hear us throughout the western United States.
So come and join us the morning of October 29th -- at 5 minutes past midnight for the last ever Ray Briem Show Ham Radio Special over KABC radio in Los Angels. That's 790 on your AM dial. Who knows. We may even QSL.

(*****
DISABLED HAMS FUND

The ARRL Foundation has established The Program for the Disabled Fund. This, to raise funds for the development of educational and informational materials for disabled licensed or prospective hams. Your contribution can help make popular ARRL publications available in forms most useful to disabled hams and their instructors. For more information please contact The ARRL Program for the Disabled Fund, 225 Main Street, Newington, Connecticut 06111.

(*****
SMRS FRAUD CHARGE

The Securities and Exchange Commission, responding to a complaint about a Florida based licensing mill has teamed up with the FCC's Miami office to act in the case. As a result, an investment company brokering the sale of Specialized Mobile Radio System and Private Carrier licenses as investments through infomercial television advertising is now charged with interstate fraud.
The FCC Miami Office provided information about licensing procedures and developed facts that showed the investment firm had been charging an average of $7,000 for each license. The SEC has seized the company and issued a temporary restraining order against its owners doing further business. Before it was able to stop the scheme some 12,000 investors had been dinged.

(*****
DP3MIR ACTIVE ABOARD MIR SPACE STATION

German Astronaut Dr. Ulf Merbold is on the air from the Russian MIR space station signing DP3MIR. This, during the ESA EUROMIR 94 mission.

In order to give actual information regarding the mission to as many radio amateurs and SWLs as possible, he is using the digital voice memory of MIR's ham radio rig designed and built by Thomas Kieselbach, DL2MDE. Kieselbach made arrangements with DP3MIR to load actual spoken reports into the digital memory. The reports in English and German are being retransmitted automatically on 145.550 Mhz FM in regular time intervals.

(*****
PRODIGY JOINS INTERNET

Prodigy Services Co. has announced easier access to and help on the Internet. This, for its novice members who often receive insulting messages from more seasoned users on the world's largest high tech computer network.
Reports quoting the Reuter news agency say that Prodigy will offer a tutorial for new Internet user practice and education, simple point-and-click retrieval of frequently asked questions on Internet discussion groups and a primer on what Internet types call "Netiquette. That being the protocol demanded of all new Internet users by those already there.
Prodigy also plans to set up its own node on the Internet, which would enable Prodigy to offer content and services to Internet users.
William Day, a Prodigy product manager, is quoted as saying that his users frequently send test messages to the Internet newsgroups. As a result, many are "flamed" or insulted, by the typical sophisticated computer users on the Internet system.

(*****
UK AWARD

From Great Britain comes word that Roger Betts G0TRB, has been named as the recipient of the RSGB Supreme Transmitting Award in recognition of his three Senior Awards for operation on 50 Mhz, 144 MHz and 432 MHz. He also received an updated award for contacting fifty countries on the six meter band.
On 70 MHz, a band not available in the United States or ITU Region 2, Derek Thom, G3NKS, has been awarded certificates for 60 countries, 40 locator squares and 8 countries worked and confirmed.

(*****
UK BEACON

Also from the United Kingdom , word that the 23cm beacon GB3CLE will have to close down at its existing site next March. Two alternative sites have been offered. One is near Oswestry in North-West Shropshire and the other is near Newtown. The sponsors of the beacon, the Salop Amateur Radio Society, invites users to indicate their preference. Anyone who uses this beacon, and who would like a say in its future, should contact the keeper, Don

Goddard, G3UQH, at his Callbook address.

(*****
DX

In DX, word a large international team of hams will travel to Mexico's Naval Base of Socorro Island from 23 October through 01 November including a multi-single entry in the CQ World Wide SSB Contest. Signing XF4M, the team will operate on all HF bands and modes including RTTY and the RS-12 satellite.
Soccoro Island is in the Revillagigedos Islands Group and this DXpedition also marks the first contest effort ever from Revillagigedos.
Also, for the first time ever, the Mexican military will permit two prominent Russian amateurs to operate from this strategic island. They are Andy Chesnokov UA3AB and Igor Booklan RA3AUU. Both are well-known for DXpeditions to Afghanistan and Myanmar Republic in Burma.
Others on the team include Frank Smith AH0W, Ed Kritsky NT2X, Gabriel Valdez XE2Z, Alfonso Belmar XE1ILH, Pepe Lozano XE1MX, Victor Keller XE1VIC, and Motoaki Saito JH1EDB.
All stations working XF4M will get a prompt QSL from JH1AJT.

NEW BABY

And finally, back in 1987 this reporter had the good fortune to host a ham radio promotional video called The New World of Amateur Radio. Those of you who have seen that show will remember I was joined on screen by two teenage hams. Well -- Nathan Pyle KB6PLH and Kelly Howard N6PNY were teen-agers back then.
Since 1990, Kelly Howard has been Mrs. Steven Lenert, and on Sunday night, October 2nd she gave birth to her first child, a 7 pound boy named Michael Steven.
Through "The New World of Amateur Radio," Kelly brought a lot of joy to hams around the world. And through the magic of that video she has remained a very special part of all of our lives.
So as we end this weeks newscast, we ask you to join with us in congratulating Kelly Lenert, N6PNY and her husband Steven on this very special moment in their lives. We also welcome Michael Steven Lenert into his own new world, that some day may even include Amateur Radio. Who knows what the future will bring.

BULLETIN 347 MGT-Overview - RACES, What's That? 2/2
Release Date October 10, l994

In the last bulletin we learned that ideas and images associated
with terms, such as "amateur", can close down the listening
process and abort further mind-to-mind communication. We
particularly described officials who "tune-out" when the word
"amateur" comes up in the conversation.

At State OES we've begun a long-term process of reforming the
way we describe the service that is rendered by those who have
FCC licenses issued under the Amateur Radio Service provisions.
In describing the Auxiliary Communications Service we have begun
to eliminate the word "amateur" entirely . It can be done by
reference to the section, or by referring to FCC licensed
specialists whose activities are limited to non-business,
non-pecuniary service.

Is that important? Yes. Even though there are areas where
"Amateur Radio operators" is a term that is highly regarded,
there are hundreds more where the term deprecates and has
unfortunate consequences to the emergency communications concept.
As mentioned in part one, there are far to many instances of
people "turning out the lights" of their minds when the term
"amateur" is in the conversation, no matter how correct it is in
its definition under the FCC regulations.

People who open a business often learn the importance of the
right name immediately. "Silvia's Silk Screening" soon may become
"Superior Silk Screens". The same thing applies to the world of
"Amateur Radio". Too many people associate "amateur" with
unpleasant experiences they or someone they know have had:

interference on the TV, unsightly antennas, messy property, loud and boisterous mannerism, and so forth. Oh, yes I know there are places where "Amateur" has important and accepted meanings and you may well be proud of that fact. However, the point is that is not universal by any means, and this seeks to point out that critical fact.

One way to overcome the problem is to rename the emergency communications unit of a government. It could be a DCS (Disaster Communications Service) unit. It can be an AUXCOM unit. It can be an ACS, Auxiliary Communications Service, like the one we have at State OES. Any of these can incorporate the RACES and be less confusing. The goal is to overcome the hurdle of miscommunicated ideas. RACES is confusing to many - one person wanted to know why we had a 'racist unit'! So, you see, it pays to apply your ingenuity to the process and solve this "communications" problem!

Cary Mangum, LL.B., JD., W6WWW
State OES Chief Radio Officer
EOM.

BULLETIN 348 MGT: Radio Officer category
Release Date: October 17, l994

What the Radio Officer must know
There are certain aspects of the emergency management agency
that the Radio Officer needs to KNOW, from experience and
on-going participation, otherwise he/she is not in the position
of fulfilling that role adequately.

Here, from my experience, are some of the most important
aspects:

1. Familiarity with all activities of the jurisdiction.

2. Systems; i.e., must know what the existing communications
systems are, and how to augment them most effectively.

3. In a call-out must know what NEEDS to be done; what MAY be
done; what MAY NEED to be done; And what should NEVER be done.

4. Be proactive, yet distinguish the real from the false in what
people expect of the unit.

5. An effective leader to those who want to serve their
government in emergency communications

6. Learn to delegate effectively.

7. Able to think through how to handle, register, keep track of,
and manage Mutual Aid responders and/or level 2 volunteers where
applicable.

8. Be neither a "yes" person, nor a "no" person in the
relationship with the agency staff person to whom the Radio
Officer is responsible. Instead be responsive to the need of that

person in an effective and understanding manner.

9. Be an effective liaison to any and all resources that can be utilized in an emergency.

10. All of the above while at the same time augmenting the paid staff in ways that they come to depend on the Radio Officer in the same way as the most important key paid staff. Do whatever needs to be done in support of the mission of the emergency communications unit. This may well mean countless hours of personal involvement in intricate details that seem far removed from on-the-air operations, yet are the very basis upon which reliance, trust and confidence by agency personnel is based.

Cary Mangum, W6WWW, CA State Office of Emergency Services, Chief State Radio Officer. (Volunteer)
EOM.

They work on the dynamo principle. A dynamic microphone is used that generates a voltage when sound waves vibrate a coil in a magnetic field (or a magnet vibrates next to a fixed coil). That voltage then drives a sensitive set of headphones at the other end of the wires.

A crude form of a sound powered intercom is simply two speakers wired back to back. Speak into one, and the other reproduces the sound. Ordinary speakers aren't sensitive enough to make this very loud, but a high output dynamic microphone coupled to a sensitive headphone is.

Gary

>on this everytime the posting appears? I seem to recall the previous 2 times
>that it was found to be a fake. Is this time any different?

the announcement was posted by don bledsoe on the radio rt on genie. since
he's been one of the big wheels in larc, i would say the announcement is
genuine. (off hand, i'd have no reason to doubt it -- the claims that had
been made over this sound like a rash decision was made w/o thinking of what
the law requires these days...so this sort of settlement is what i would
expect to see).

806. Princeton, NJ 2M Repeater Upgraded!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-16 20:20:06 UTC
From: Gerry_Jurrens@monet.prs.k12.nj.us
Message-ID: <76634.ensmtp@monet.prs.k12.nj.us>
Source record: 258460

We are looking for reports from stations who have been able to hear the Princeton, NJ repeater all these years, but have not been able to get into it...the repeater has just undergone a major upgrade (on the receiver side) and should be reachable from just about anywhere it can be heard. It's an open repeater, with PL 3B 131.8 on the output for those who want tone squelch decode.

The repeater is centrally located in Mercer County NJ and is designed for HT coverage throughout the County. We have gotten positive reports from Valley Forge, PA, Wayne, NJ, Toms River, NJ, and Vineland, NJ.

The input frequency is 147.46 MHz, with output on 146.46 MHz (yes, that's a one MHz split and most modern radios can hack it -- either letting you set separate transmit and receive frequencies or permitting <any> split. Try it, you;ll like it!

Looking forward to hearing from you....Best 73,

Gerry Jurrens, N2GJ
Kingston, NJ 08528

Here is some of the info:
SFU455A: 10=/-3KHz at -3db, 5 dB insertion loss. No numbers shown in
catalog
for 60 dB. Only spec is "6 db selectivity @ -10 KHz.".

Specs are same for SFU455B, except center f is 462 KHz., and this
part is meant to be used with an IF transformer.

You might try Murata/Erie for more info; 2200 Lake Park Drive,
Smryrna, Georgia 30080. Fax 404-436-3030.

SB DX @ ALLBBS $OPDX.179
Ohio/Penn DX Bulletin No. 179

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 179
BID: $OPDX.179
October 17, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DX NEWS Letter, K4CEF & Southeastern Cluster Group, WA1G, NA2M, K3DI, N4VZ, KG4ML/WB6VGI, KJ4VH, W6CF, KK6EK, N6SS, N7VEW, F8RU, G0MRF, VA3CW, VU2SMN and YU1AB for the following DX information.

5V, TOGO. Adam, N7VEW, states he has a sked with Dave, 5V7MD, on October 19th, on 14165 kHz at 2200z. After their sked, Dave will stick around for about 1 to 1 1/2 hours to work stations either from a list or freestyle. There is a possibility that Adam may become 5V7MD's QSL Manager.

8R, GUYANA. Marko, OH6DO/AB6NJ (and now VR2NJ), will be active in the CQWW SSB DX Contest as 8R1K. He is planning a serious Single Op/All Band effort. His length of stay is unknown at this time. QSLs go to OH6DO CBA only. Marko says, "please don't use other addresses."

9U, BURUNDI. Ted, F8RU, heard from Paul, 9Q5EXV, that he and a few others would be active during the CQWW Contest as 4U9U.

BS7H CARDS. Jim, W6CF, the QSL Manager for this operation, has announced that all replies went into the mail, October 15th. Card requests for BS7H/MM did not go out because the logs have not been received as of yet. The logs are expected to arrive sometime next week.

C5, THE GAMBIA. In late October-November, the Whitton Amateur Radio Group from South West London will be mounting a DXpedition from C5-land. There will be activity on 13 amateur bands from 160 meters to 2.3GHz. This will include 6 meters and satellite via OSCAR 13 mode B and S. The Gambia is very rare on satellite and this will be the first operation on mode "S" from this location. Operating dates will be between October 23rd and November 10th, which will include activity in the CQWW SSB DX Contest. Look for C56/G0MRF and C56DX during the contest. QSL via G0MRF direct or via bureau. Note: In callbooks prior to 1994, G0MRF is listed under G8PDW.

CT3/CR9, MADEIRA ISLANDS. Frank, DL8KWS, was orginally signing DL8KWS/CT3 from here but is now using the call CR9WAG. Another German operator is also active signing DL3KUD/CT3. Both stations are very active on CW and on all bands (including the WARC bands). They will be there until October 27th. QSL via their CBA.

IOTA NA-066, CALIFORNIA SOUTHERN GROUP. Bob, KK6EK (one the operators from the 3Y0PI DXpedition) will be here November 25-27th. His plans are to make a special effort on 40 meters. During the operation, he will tie into InterNet (intermittantly) and post operating skeds (on the DX Reflector).

KG4, GUANTANAMO BAY. Jeff, WI2T, will be active in the CQWW SSB Contest as a Single Op (work sked permitting) signing KG4JO. He will be using the TS-530 and antenna system at the KG4AN club station in Guantanamo. QSL via WI2T.

LX, LUXEMBOURG. A group of Dutch operators will be active from October 26-30th. They will be using the callsign LX/PA3DKC on HF (including the WARC bands) and LX/PA3CDI on 6 meters.

S7, SEYCHELLES. Andres, EA4EGZ, will be on Mahe Island from October 21-28th. Activity will be on CW, 40-10 meters.

V2, ANTIGUA. Ratko, YU1NR, will be active for 20 days starting October 26th. His activities will include participation in the CQWW DX SSB Contest, he will be on all bands and CW/SSB/SSTV/Packet. Look for him to sign V29NR. QSL via YU1NR, Novakovic Ratko, P.O. Box 145, YU-34000 Kragujevac.

VP9, BERMUDA. Dick, K3DI, informed OPDX that he will be active as K3DI/VP9 in Warwick, Bermuda from November 6-12th. QSL via his CBA or the W3 QSL bureau.

VR, PITCAIRN ISLAND. It is reported that VR6MW and other VR6-stations are active around 0600z on 40 meters SSB (e.g. on 7083 kHz in a net).

VQ9, CHAGOS ISLANDS. This one is for the 160 meter DXers! The operations of VQ9SS and VQ8QM have ceased effective October 12th until further notice. In the meantime, look for limited operations by VQ9KC and new arrival VQ9ZX.

VU4/VU7, ANDAMAN AND LACCADIVE ISLANDS. Bruce, WA1G, received a letter from Suhas, VU2SMN, stating there are continuing plans to activate VU4 and VU7. Suhas reports that they have filed huge amounts of paperwork with the Ministry of Telecommunications over the last two years in hopes to receive a licence. They still hope to be active sometime this October, but the group cannot announce the details like exact dates of operation, call signs, QSL info, etc.... until they get the official licence in hand.

XU, KAMPUCHEA. N4VZ reports that European stations were working XU1MF on 18138 at 1515z on October 11th, but he was unable to copy him. One of the Europeans repeated back his QSL manager as JA1JTU. We've seen no mention of this station in recent bulletins or on the air.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

And it might interest you to know that sound powered phones as they are referred to in the navy and coast guard are alive and well and used every day for intership communication.

SUMMARY OF AMSAT-NA SYMPOSIUM

HR AMSAT NEWS SERVICE BULLETIN 288.01 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 15, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-288.01

AMSAT-NA Annual Meeting and Space Symposium

The 1994 AMSAT-NA Annual Meeting and Space Symposium was held October 7-9 at the Orlando, Florida Airport Holiday Inn. Attendance set a new record with 227 registered including 24 from countries outside the U.S. Countries represented were Canada, Mexico, the U.K. Germany, Switzerland, Sweden, the Azores, Argentina, Chile, Paraguay, Brazil, Panama, Jamaica, and Japan. Papers on most aspects of satellite design and operation were presented including an entire afternoon devoted to Phase 3D. The symposium was highlighted by tours of the Phase 3D Integration Facility which has been established in a Foreign Trade Zone at the Orlando International Airport. All who saw the facility and the Phase 3D spaceframe were very impressed by the quality and care going into the construction of the new satellite.

A Proceedings was published by ARRL in conjunction with the Symposium, copies of which are available from AMSAT Headquarters. For information, call Martha at 301-589-6062.

AMSAT-NA Board Meets - Elects Officers

The AMSAT-NA Board of Directors met October 9 and 10 in Orlando, Florida. Topics addressed included long range planning for the organization following the completion and launch of Phase 3D, production of revenue for new projects from Phase 3D developed technology, future policies with respect to providing MICROSAT technology to overseas amateur groups, guidelines defining amateur satellites, interaction with the IARU, cooperation with various university groups building, or planning to build, satellites and the TAPR/AMSAT DSP-93 project.

In addition, officers to serve until next year's Annual Meeting were elected. These are as follows:

President Bill Tynan W3XO
Executive Vice President Keith Baker KB1SF
Vice President Engineering Dick Jansson WD4FAB
Vice President Operations Keith Pugh W5IU
Corporate Secretary/Manager Martha Saragovitz
Treasurer Art Feller KB4ZJ

Thus, Keith Baker replaces Ray Soifer W2RS as Executive Vice President. This is in accordance with Ray's expressed desires. W2RS will remain active as AMSAT-NA's principal liaison with overseas AMSAT groups and the IARU as well as other tasks for which he is especially suited.

A new department called "Electronic Publications" was established and Paul Williamson KB5MU was appointed by the President as a Vice President to head that department. Appointments of additional officers will be made by the President shortly.

The AMSAT-NA budget for 1995 was approved. It reflects very heavy spending for completion of Phase 3D project.

AMSAT-NA Members Win Award for Papers Presented at Institute of Navigation Conference

Dr. Tom Clark W3IWI and Frank Bauer KA3HDO both won "Best in Session" awards for papers presented at the Institute of Navigation (ION) GPS-94 Conference held in Salt Lake City in late September. W3IWI's paper was entitled "A Low Cost Spacecraft Receiver for Orbit and Attitude Determination." It described the GPS equipment being readied for installation in Phase 3D. KA3HDO's paper was entitled Preflight Testing of the SPARTAN GADACS Experiment." SPARTAN is a package, containing an amateur transponder, to be deployed during an upcoming SHUTTLE mission.

The AMSAT News Service congratulates both AMSAT members for these well-deserved honors.

AO-21 GOES SILENT

HR AMSAT NEWS SERVICE BULLETIN 288.03 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 15, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-288.03

DB2OS Reports Sad News About AO-21

"I'm sad to inform you that AO-21 (RS-14) suddenly suspended it's operation this morning on October 13, after more than 3 1/2 year of successfull operation in space."

"Both the RUDAK beacon on 145.987 MHz and the CW telemetry beacon on
145.812 MHz are now completly silent. Commands to re-activate the
RUDAK beacon from ground were unsuccessful."

"At the moment it is unclear if a system fault occured or if the payload
was switched off by the INFORMATOR-1 main command station."

"On 16-NOV-94 last month, the command station for the main satellite suspended
active thermal and attitude control, as the primary mission of the
spacecraft was over. Although at the same time it was indicated that at
least the AO-21/RS-14 amateur radio payload will be still powered up and
can continue it's operation. However, it was also made clear that the
Main Commandstation will no more control INFORMATOR-1 in case of trouble."

"We are trying to find out what happened, but it may turn out that AO-21
will never come back to life again."

"Please keep your fingers crossed."

SB SAT @ AMSAT $ANS-288.04
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 288.04 FROM AMSAT HQ
SILVER SPRING, MD OCTOBER 15, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-288.04

Weekly OSCAR Status Reports: 15-OCT-94

AO-13: Current Transponder Operating Schedule:
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Blon/Blat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse
seasons. As always the command team may have to have to make temporary
changes to the published schedule. In that case we will try to minimize
the inconvenience, setting Mode-B OFF from MA 230-256 in the first
instance.
==========
[G3RUH/DB2OS/VK5AGR]

KO-25: The Keps being distributed for KO-25 are still those for Object
22830. The Keps for Object 22828 are, by general agreement, much more
accurate for KO-25. W5RKN believes it is time to drop Object 22830 and
distribute the Keps for KO-25 as Object 22828. [W5RKN]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

>73...Jim N2VNO

No, actually most "homosexual" (try gay sometime - it's less clinical)
organizations exist to promote the fact that we're human, just like everyone
else, and just like everyone else we want and deserve to be treated as such.
Nobody is trying to "sell" you on being gay; God knows gay people have
enough trouble without folks like you on our side of the fence... I had
hoped that technology might help bridge gaps in understanding between people
with different feelings and beliefs, but it looks like misunderstanding is
still alive and well here.

I have heard about Marijuana plantations, Military
installations, Missile silo's, and Laser and bomb
testing areas in the Cleveland National Forest. Can
anyone provide any addittional information?

Specifically, I've heard of a VLF radio antenna that
is suspended in a culvert below a station on Pleasant
Peak. Anyone know about his?

Other than that, I'm interested in any nifty and/or
little known places to explore in the vicinity of
Orange County, California.

Please reply via Email to dr261@cleveland.freenet.edu
and not to this newsgroup, since I do not often check
the usenet newsgroups.

Thanks

>in the body: subscribe ham-univ
>

One significant beef with the above. You've just instructed the net
ham population to send subscription requests to the article
submission address and not the subscription address. This will cause
all of the subscribers to receive such messages (and not be able to
subscribe the requestor to the list as they are not the appropriate
recipient). Replace "ham-univ" in the address above with "listserv."
This will cause your subscription request to go to the right location,
and not start off your participation on the mailing list by annoying
the readership.

> comments, criticisms, observations you have on

The "T" that is missing, stands for tone, as in touch-tone. I saw one of these at Radio Expo for $299 (I think?!). It lacks any keypad, hence its lack of ability ti generate touch-tones (although I wouldn't be surprised if a MT8870 or 8880 chip is in there to decode/encode for TTsquelch, I just dont know how one programs it!).

If all you want to do it talk- and you don't mind dialing-in the freq rather than direct numerical entry than I suppose this radio might work.

Anyone with corrections, please feel free- I only glanced at this at the hamfest while running for all the other bargains :-)

Surely it is better to find the mic gain pot inside the rig and just turn it down slightly? I am not familiar with that type of HT but can't imagine Yaesu have left out that setting from the mic circuit.

Just as some of us will always be nauseated by the acts of child
molesters and those who commit bestiality, so it is with gays.
And I believe that sodomy is still illegal in some states. According
to our campus newspaper sodomy among the gays in the restrooms on
campus is rampant.

Homophobic? Hardly, since I have no fear of the estimated 2%; try
homo-disgusted.

ObRadio: Any problem with using a length of iron re-bar for an
earth ground? Or does everyone use expensive copper pipe? After I
realized that there was a voltage potential between the house wiring's
electrical ground and the cold water pipe outdoors I've decided to
drive a grounding rod into the soil (seasoned with rocksalt!).

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 831 16th October 1994

Well, this weekend is JOTA. I hope you have offered a few minutes of your time to help get young people interested in Amateur Radio. These youngsters are our replacements, and our growth factor ... How many amateurs do we need to keep our frequencies, to stop the commercial grab?

Remember, amateurs have been responsible for many advances used for commercial radio application, and also that these innovators need to have frequencies to experiment. If you have friends who have been inactive for a period, why not talk them into dusting off their gear and getting back up on air. Usage is automatically recorded by the department off air, and every few minutes being active on air helps maintain our frequenc-ies.

Keep our frequencies -- use your radios.

RTTY Digital Journal name and frequency change

The new name for this magazine is now the Digital Journal and it has gone from ten issues a year to twelve per year.

If you are thinking of subscribing, there was word of a hike in fees in 1995, so do it now. Cost per year is 35 dollars (US), in US funds. Address is PO Box 2550 Goldenrod, FL 32733-2550 USA.

This is - the - journal for digital radio and is well worth a subscription. It has all the rules for contests, articles on the newest modes, and comparisons with established ones, dx news, and lots more (no -- I do not get a free subscription, hi hi -- I just think its worth it.).

ARRLDX061 DX news

Thanks to Tedd, KB8NW, the Ohio/Penn DX Bulletin, Frank, AH0W/ OH2LVG, the Yankee Clipper Contest Club PacketCluster network, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, G0MMI, Adam, N7VEW, and the Contest Corral column from QST magazine.

RWANDA. It has been reported that Hartmut, 9X5HG, has returned to Rwanda and is active once again. Several southeastern USA stations worked him on October 1 around 0330z on 7028 kHz

ETHIOPIA. ET3BT has been on the 14226 DX Net almost daily. Try between 1800 and 2230z.

BURUNDI. 4U/F5NWB/9U has been spotted on 14240 kHz around 2100Z. QSL via UNSCF Radio Tech, PO Box 200, Bujumbura, Burundi.

PACIFIC DXPEDITION DELAYED AGAIN. Masa, JE1DXC, aka A35XC, continucs to have problems with flight reservations. This has caused delays in his 3D2, T30 and T2 DXpedition.

MOUNT ATHOS. Tokyo PacketCluster spots show Monk Apollo, SV2ASP/A has been active on RTTY. Listen for him around 14083 kHz netween 0700 and 0730z.

MADEIRA. DL8KWS/CT3 and DL3KUD/CT3 will be active on all bands October 6 through 27.

ANGUILLA AND SINT MAARTEN. Warren, WB1HBB, will be vacationing with some operating from Anguilla as VP2E/WB1HBB October 18, 19 and 20. Sint Maarten is slated for October 21 through 28 using the call PJ7/WB1HBB. Try 14.263 kHz at 1230z and 2100z. QSL via WB1HBB.

REVILLA GIGEDO. This is to correct some information released on the planned DXpedition to XF4M by Frank, AH0W/OH2LVG and company. Their 30 meter operation will not, repeat not be the first such operations from Revilla Gigedo.

QSL TIPS. G0MMI reports that he is the manager for LX1DM. QSL contacts from 1990 to 1993 to his Callbook address. Also, he is no longer the manager for YI1RJ, Qaid, who is now in Jordan. Adam, N7VEW, is now the QSL manager for Randy, TJ1JR. Please QSL to Adam's current Callbook address with SASE.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin VK2PFQ.

Ah! JOTA weekend....The weekend All Hams look forward to....Now before anyone gets excited and accuses me of having a shot at people, a check of the Records of the 1st, or was it the 2nd Quakers Hill Scouts or even perhaps a glance at an old Callbook under VK2SAQ will reveal that I too was once.... a JOTA person...Yeah!..other things seem to take up my time these days.

The point is, that, this weekend would not be possible were it not for the efforts of truely devoted people....and usually, the same devoted people. It's the weekend that all your mates, when you tell them that you desperately need help with JOTA .....ALL seem to have something on, that they arranged ...ages ago. It's the weekend that you don't seem to have friends anymore. The weekend that, no matter how often you call .... "CHUCKIE" ...Chuckie, doesn't seem to be in.... On behalf of your fellow Amateurs....THANK YOU! I for one, and I know that I have many, many supporters, appreciate the time that all of you spend with these Scouts and Guides...Again.... THANK YOU!

There is not a great deal to report this week, apart from the usual dose of bad news. Last weekend it was discovered that certain things had been stolen from the property here at Dural. Amongst these were several lengths of FHJ-4 Hard line Co-ax cable, one 180 foot long, a couple were 39 and 68 feet long respectively and one 42 feet length complete with connectors; a couple of copper clad earth stakes and some ni-cad battery packs.

The disturbing thing about this is, that whoever or is it WHATever, stole this equipment... had a key! Some of the gear was lifted from the shed and some from inside the building. What sort of a worm would be responsible for such an act. What sort of an individual steals from his friends, and to think... this person is, or is it was, in a position of trust.... I hope you are as incensed about this as I am....Dear oh Dear. The shame of it all is that this sort of behaviour puts everyone under a cloud who has a key. I'm sure that the people who come up here these days to read the Broadcast are not to blame....but what of those who still have keys...What of those who still have keys and no longer work for the Division and HAVE NOT returned their Keys....What of them.... Hmmmmmmmm!!!!....Whoever you are ....Shame on you! But wouldn't it be nice if this person had second thoughts and returned the goods...NO questions asked.

I'll even acknowledge it on the Broadcast. Now on to more pleasant matters.

The Institute is in need of a property valuer. It is time to renew our insurance policies and your Council feels that the existing valuations are in need of updating. No, we don't expect anyone to work for nothing.... mates rates would be good enough. Hi! Hi! Anyone fitting this description, would they please contact me on 626 9288 or leave a message with Margaret at the Parramatta Office.

Last Friday night there was a Council meeting at Parramatta, amongst the matters discussed was a report from the NTAC Committee. This committee is the first of many the Council hopes to set upset up to consider various facets of our hobby. The reasoning behind the creation of committees is that, Council believes that decisions are best made by people, who have an expertise/ interest in a particular area. Hopefully, this will mean that "correct" decisions are made. Didn't someone say something about not being able to please all the people all the time. Ian Rosser prepared a report from this Committee, I'll read an edited version of it for you.

NTAC COMMITTEE REPORT.

A meeting was held last Thursday the 13th October at Parramatta to consider link frequencies.

Present were Peter Kloppenburg, Barry Sullivan, Bob Meyer, Tony Farrow, Barry White and myself, Ian Rosser as Chairman. We were fortunate that Col Christiansen had made himself available, in his own time, to assist with technical advice.

The meeting commenced at 7.30p.m.. Lively and sometimes heated discussions followed. All aspects of linking were considered, such as cost of installation, limited spectrum space, desirable implementation, and practical applications.

A great deal of time was devoted to packet links as these seem to be the area of greatest contention. Put simply, in the LONG TERM, if Packet links remain as they are, future developments of other aspects of linking on the same sites may be difficult. Against this, the subcommittee have considered throughput and cost, against poor frequency management. In theory (in practice in the Commercial World), all transmitters on a site would be grouped on one segment of a band whilst all receivers would be at another segment, Thus avoiding desensing problems. Currently, packet sites are SINGLE frequency transmit and receive. If two or more such links are required on the same site, they almost, by necessity, HAVE to be at either end, thus limiting future TWO frequency links (eg voice links).

The committee took on board cost considerations, particularly for smaller country clubs, and came up with what is believed to be, an achievable compromise.

Much work has still to be done in this area, but this sub-committee has come up with a BROAD policy statement.

Which is...

"To provide for future development of the LINK spectrum, the WIA will allocate a FREQUENCY PAIR with either TX on one and RX on the other OR...BOTH. However, clubs are strongly advised to opt for TX on one and RX on the other frequency of the pair as the long term costs, in both dollars and wasted spectrum space, would be FAR GREATER if there was TX and RX at both ends.

The Committee wishes to encourage two frequency link operation.

REMEMBER that costs (both long term and immediate) and practical considerations have to be taken on board and balanced against what we would ideally like to have. It is our belief that ULTIMATELY, ALL link frequencies will have to be two channel pairs to provide for future expansion.

Ian Rosser.
NTAC Co-Ordinator.

My thanks to Ian and the Committee. This "solution" might just please some of the people, some of the time!!

Finally I had a phone call last Friday from a Howard Leake W6AXX.... a lovely bloke. He has a request to make. He sent me a Fax to confirm our conversation....I'll read it to you in his words.

"Hello Mike,

Per our telcon this date in Parramatta. My name is Howard Leake and my amateur radio call is W6AXX Licensed in the U.S. since 1940. I had my 75th Birthday in August and my wife, Carol, gave me (us) a Tauck Tour of Australia and New Zealand. The 21 day tour begins in Sydney on Sunday 30th October, 1994.

I am an avid HF/VHF Contester and we have arranged to arrive Sydney, Thursday evening, 27th October, so that I can apply for a VK2 call on Friday AM at the Victoria Cross Bldg., 60 Miller St., Nth Sydney. We will be staying at the Inter-Continental Hotel.

May I please have your help to locate a Sydney Area ham who would be willing for me to use his station for the first 24 hours of the CQ WW SSB Contest, which begins at 1000 hours, that's Australian local time Saturday, 29th October.

We will depart Maryland for San Diego on Tuesday, 25th October and leave Los Angeles, Wednesday 26th October....."

This chap has without a doubt the perfect wife... ....Holidays...Ham Radio, on the other side of the world. What a life....Gosh! Isn't retirement hard for some...If anyone is prepared to help make

Howard's Holiday a complete success please contact me on (02) 626 9288 or Howard direct on 410-465-7008...Don't forget to dial 0011 1 before the number of course Or fax, the same instructions apply on 301 470 4455. What a fine gesture it would be if we could accommodate Howard's request.

Next week I will include in my address the first of a four part series provided by John Aarsse (Pronounced Ar-say) VK4QA on the 9th IARU Conference in Singapore....

See you then

Silent key

We regret to announce the passing last week of John Geoffrey Myers VK2UA. First licensed in 1938 as 2IY, Geoff was a founding member of the Manly-Warringah Club (now the Manly-Warringah Radio Society, of which he was a life member).

Born at Neutral Bay, Sydney, in 1913, Geoff was the first President of the Zero Beat Club, and a member of Harrington's Radio Club. He served with the Australian Armed Forces from 1939 to 1945, as Captain and later Company Commander with the 4th Division Signal in New Guinea.

After a break of some years, Geoff was re-licensed as VK2UA in 1978, and maintained a keen interest in Amateur Radio until his passing at age 81. His funeral took place last Thursday.

Geoff will be greatly missed by his family and many friends in Amateur Radio; please pause with us now in memory of John Geoffrey Myers VK2UA.

Vale Geoff Myers VK2UA

-- Richard Murnane VK2SKY, on behalf of the Manly-Warringah Radio Society

Divisional News

The next examinations at the W.I.A. (NSW) Division will be held on the 30th October at 109 Wigram Street Parramatta commencing at 12 midday.

Applications will close 4pm on Thursday 20th October.

Contact the office on 689 2417 for application forms.

Jim Walker VK2XJW Education and Examinations Officer

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we

discuss the October issues of the various magazines.

"Electronics Australia" discusses amateur efforts in observing the comet impacts on Jupiter; Tom Moffat discusses passive repeaters in his usual style; the debate about the future of Amateur radio and the WIA continues; and proportional radio control systems are introduced, as are stepper motors.

"Silicon Chip" builds a simple dual rail power supply; and Amateurs who love "gadgets" can construct a talking headlight reminder, an electronic fluorescent ballast, and a temperature-controlled soldering iron.

"Amateur Radio" discusses technical aspects of HF receiver design; some more information on the ubiquitous single-coil "Z match" is given; the TH3-JR antenna is tuned up; and the series on the FM-828 circuits is completed.

"Amateur Radio Action" discusses Amateur and weather satellites; and shows how to calibrate the MFJ-1270 series TNCs for better performance.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

WICEN News

The next major exercise is the annual "Hawkesbury Classic Paddle", a 111km paddle down the Hawkesbury River, to be held next weekend. As this takes place under moonlight for the most part, the safety of the paddlers is of paramount concern, and WICEN provides an important communications net. If you would like to help out in this worthwhile event, then please contact Kevin VK2CKD. If you have portable packet equipment, then so much the better.

Following this event is the WICEN Co-ordinators conference at Charles Sturt University, Bathurst, on the weekend of 29-30th October. The conference will commence at 0930 Saturday, and the programme will comprise lectures on the role of various positions in the organisation together with various guest speakers. This will be followed by dinner in a local restaurant, and since Daylight Saving is scheduled to start the morning after, this will be an interesting test of WICEN's adaptability to losing an hour's sleep under strenuous circumstances... There will be a discussion period after the dinner, followed by a short business session on Sunday. Due to the late posting of the newsletter, the deadline for registration has been extended to Thursday 20th October i.e. this coming Thursday; full details will be found within the newsletter, and please note that a pre-registration fee of $10 should accompany your application.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) Inc. operates a telephone BBS, and it is accessible at speeds from 300 to 14,400 bps on (02) 888-2763. Brett VK2XMU is the "Sysop", and all listeners are invited to use it. Many programs,
such as "virus scanners" and "PGP", are available for downloading.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

Tom Christian VR6TC was in the news recently. The great-great-great grandson of Fletcher Christian of "Mutiny on the Bounty" fame, was until recently the only direct communications link to the outside world for the 55 people living on Pitcairn Island. Now satellite technology has arrived on the island, Tom is thinking of leaving the airways.

It was also reported that Tom had to be flown to New Zealand last month to have a tumour removed from his stomach and pancreas, and that a friendly Amateur helped keep him in conatct with his wife, Betty. We wish Tom a speedy recovery, and hope that he won't abandon HF completely.

****

The bush lawyers ought to have a ball with this one, as will packet BBS sysops and those preoccupied with defamation laws: this week, the High Court ruled that Australia's Constitution guaranteed a right to free political speech. This effectively removes state laws that require that the media or citizens prove the truth of their statements when they are being sued over political discussion.

In the future, defendants need only prove that they did not knowingly publish false material, did not publish the material recklessly (that is, not caring whether it was true or false), and took reasonable steps to substantiate their claims.

How widely this ruling will be applied (and how it will affect Amateurs, given that Amateur bands may not be used for political purposes) remains to be seen.

****

"News briefs" looks at communications news items that appear in the mainstream media. Thanks as always go to "The Australian" and "The Sydney Morning Herald". Are these the only newspapers in Australia that publish items of interest to us radio enthusiasts? Surely not! Send us a press clipping from local paper - fame and fortune could be yours (well, fame at least - you'll get name mentioned on the broadcast!).

-- Richard Murnane VK2SKY

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFICER

CLUB NEWS

Tamworth

The Tamworth Radio Club wishes to advise that the next meeting of the Club will be held on Friday 21st October 1994 in the Soccer Federation Rooms Jewry Street Tamworth at 7.30 pm.

All members of the club are requested to attend this meeting.

Supplied by Doug Diss VK2TDD

A.N.A.R.T.S.

The Australian National Amateur Radio Teleprinter Society advises that after the 40 metre RTTY broadcast has been transmitted each Sunday an edited CW version is transmitted by VK2CTD. This is due to poor propagation as we approach the Sun spot cycle minima.

The CW cast lasts just over one hour, it is transmitted at 20 words per minute using a PK232 modem making it very stable CW for anyone wanting to improve their CW skills. Copy it on your own modem or copy it yourself for fun.

The frequency and time of transmission is 7025 kHz plus or minus QRM AT 0215 UTC.

-- Col Davies VK2CTD, President

From the VHF to SHF DX Interest Group

Special note. The Group's net has a new start time of 15 minutes after the end of the morning broadcast -- not the evening broadcast. The net uses 146.5 MHz FM, this FM portion runs for approximately 30 minutes and then;

Transfers to 144.150 MHz Upper Sideband.

- The SSB activity night which is still been held every Tuesday evening 20:00 to 21:00 AEST it is well patronised but certainly would like to see some new stations so let see you there and join in the fun.

Stations call on a frequency of 144.100 USB to establish initial contact and then move to a clear frequency on the SSB segment to continue.

- The group's next talk night in November will be to start a preamplifier building and testing program.

Richard Soulie VK2ARS Publicity Co-ordinator

AATC

The next general meeting of the A.A.T.C. Inc. is on the 2nd Sunday of the month at 1.00 pm at Chipping Norton -- more details later.

The technical lecture on the day will be announced closer to date as it will be a Christmas AATC members bar-b-que end of year function.

The printed circuit board workshop open day for A.A.T.C. members only will be held at Bexley on October 30th - the object will be to make a PCB of your choice from a club project or from any magazine.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater any-time.

--AATC Publicity Officer Bob Barnes VJ2R

HADARC
Hornsby and Districts Amateur Radio Club (Inc.)

We are inviting people who are interested in ELECTRONICS - AMATEUR RADIO - COMMUNICATIONS and related fields to join our club. Enjoy friendship and gain a very useful knowledge about the electronic age.

Meetings are held on the fourth Tuesday of each month at the Mt. Colah Community Centre, Pierre Close Mt. Colah commencing at 8.00 pm. At these meetings, a talk is given on radio, communications or a related subject. In addition to the monthly meeting, a workshop is held on the second Tuesday of each month (currently at the Asquith Church of Christ Hall, Wattle Street, Asquith at 8.00 p.m.). Visitors are most welcome.

The club holds a "Net" each Monday evening (8.00 - 9.00 pm) on the Club's repeater, VK2RNS, on 147.250MHz. All amateurs are welcome to join this net.

The Club conducts training classes and holds examinations for the Amateur Operator's Certificate of Proficiency (a prerequisite for holding an amateur station licence). These classes enjoy a very good success rate for training operators for their certificate.

For further information, contact the Club Publicity Officer:
Raymond Tooby
(02) 489 3357
or write to the Club at: PO Box 362, Hornsby, NSW 2077

Waverley Amateur Radio Society

The next meeting of the Waverley Amateur Radio Society will be held on Wednesday, 19th October at 7.00 pm. The venue is the club's new premises at

Rose Bay Scout Hall
Vickery Avenue
Rose Bay

Vickery Avenue is off New South Head Road near the Rose Bay RSL Club.

The main purpose of the meeting will be to plan developments for the new premises. Existing members and all interested in Amateur Radio are invited to attend.

Don't forget that the meeting will be at the new shack at:-
Rose Bay Scout Hall, Vickery Avenue, Rose Bay.

Simon Buxton, VK2EII, Publicity Officer

Chifley

The Chifley A.R.C. will be holding a general meeting for all club members and visitors. The meeting will commence at 1.30 p.m. on Saturday 29th of October 1994.

Also Saturday 29th of October 1994 is the final day to inform the committee of your intention to attend the club picnic at NURRANGINGY reserve Doonside on Sunday 20th of November 1994.

The club rooms are located at the Good Shepherd School, Hyatts Road Plumpton.

Brett Hazell VK2CBH Publicity Officer

Summerland Amateur Radio Club News
---
(1) Four candidates sat for the amateur radio examination last Sunday - and four candidates passed - congratulations to all concerned.

(2) JOTA is upon us this weekend and we have 14 members operating 8 scout radio stations.

(3) November 6th, at 2pm, we have a special general meeting to consider changes to club by-laws, re associate membership, and to rationalise the club membership fee structure. All members are urged to attend and to voice their opinion.

(4) The Summerland Computer Expo is organised for Saturday 26th November at the Lismore City Hall. Many commercial displays and demonstrations of the latest in computers and electronics, bring and buy tables, heaps of bargains, plenty of eye-openers and wallet-openers, amateur stations operating, refreshments. Admission $2 or $4 per family, 9-30 am to 4-30 pm. Be there.

Graeme VK2GJ Publicity Officer

Central Coast

Members and visitors are invited to attend the next meeting of the Central Coast Amateur Radio Club to be held next Friday, the 21st October. The meeting will be a workshop and the topic will be "Producing an ATV news segment".

Victor Barker VK2TV will conduct the workshop where he will explain and demonstrate the procedures and techniques for

television production. Attendees will participate in recording an actual news segment to be televised in Sydney and surrounding areas including the Central Coast.

The workshop will commence at 8.00 pm next Friday, the 21st October, in the Clubrooms, Dandaloo St., Kariong.

The next business meeting of the club will be held on Friday 4th November also to be held at 8.00 pm in the Clubrooms, Dandaloo St., Kariong.

John Pogson VK2DBC
Lecture Organiser

Manly Warringah

The Manly-Warringah Radio Society has been providing communication facilities for the Jamboree on the Air from Narrabeen Lakeside Park on Sydney's Northern Beaches.

The club's lecture night this week will feature a talk on sharks by John West (no, not that John West!). Doors open at 7:30pm for an 8pm start. The club meets every Wednesday night at the Warringah Volunteer Services Centre, Terrey Hills. Business meetings are on the second Wednesday, and lectures on the third Wednesday of the month, with informal get-togethers on other meeting nights. Visitors are always welcome. Call in on the club's two metre repeater on 146.875 MHz, or phone the club any Wednesday evening on 450-1746.

--Richard Murnane VK2SKY, Publicity Officer

Westlakes

Westlakes Amateur Radio Club will hold a Field Day at the club grounds at Teralba on Sunday 30th October.

Highlights of the day include:

-- Auction of club equipment
-- fun contests for adults and kids
-- commercial and trade displays
-- private radio sales
-- trading by tailgaters
-- free tea and coffee all day

Dine from the Westlakes barbecue at bargain prices. The gates open at 10am.

The date again: Sunday 30th October at Westlakes Amateur Radio Club, York Street Teralba.

Great Lakes

The Great Lakes Amateur Radio Club at its September meeting agreed to a request from the newly formed Kempsey Amateur Radio Club to modify the VK2RGL relay of the WIA Sunday broadcast so as to extend automatic relay through that club's repeaters for the benefit of local and visiting amateurs. This extension of the relay system is seen as desirable and offering a better quality service than would be obtained from the interception of the HF transmission.

Consideration was also given to a proposal for an increase in the packet user baud rate to 4,800 bauds to cope with the ever-increasing demand for access to the packet system. However, it is recognised that this would require a changeover synchronised with all other BBS and repeater operations in the region, or else a duplication of facilities to permit both 1200 and 4800 baud operation with the consequent costs involved.

As far as this club is concerned the restriction of user access to its digipeater is aggravated by the number of BBS services which use it for forwarding purposes, couples with the volume of messages of questionable value forwarded, many of them originating from and intended for overseas addresses and of no local relevance.

There appears to be a need for a rationalisation of the forwarding process on the daily change principle, if digipeaters in key positions, that's VK2RGL, are not to be overwhelmed.

--Stan Ellis VK2DDL

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs ...

VHF to SHF Group net on 146.5 MHz FM. . .after the morning cast
2nd Annual South Australia Technical Symposium. . . . . .Monday

First they start making calculators with equals keys and now this..sigh.

Next, they'll probably come out with a printer that makes Don Lancaster happy.

That light is a radio frequency is going to be important as an underpinning in defending the privilege to have an amateur radio station against those who think everything man does is "against nature".

We're bathed in RF. Born, live and die in it. Perfectly natural stuff. Our contribution is small compared to what people willingly allow themselves to be exposed to.

>I don't know of the FCC claims jurisdiction over lasar transmission devices,
>I doubt if they do.

I believe the radiological health folks did initially and that the FCC is involved now (look at the labels on things like your CD player or the grocery store scanner). I want to say it's Health and Human Services (was part of the old HEW) that worries about things like how much laser light you are exposed to by the POS scanners and such.

: :
: : ALSO I thought the radar used in metropolitan areas were at least 25 WATT.

: No way. They are under 1 watt - with a horn antenna that amplifies the
: signal (by making it much more directive) by about 100 times. I seem to
: recall that they were around 100 mw - which would mean the effective
: radiated power would be about 10 watts - at the mouth of the horn.

This isn't right. The mouth of the horn is too close for the
gain to fully develop--you are still in the near field region.
Otherwise, you could run into the paradox of two horn antennas
being close together, and getting more energy out of the
antennas than you put in.

One of the curious things about really big dishes is that you
can reduce the field strength away from the dish by making it
bigger! Imagine a huge dish 1 mile across, perfectly built.
You will get a tremendous amount of gain at X band, but you
have to go so far away to see it that the field strenth isn't
really that strong. Not surprisingly, you can stand anywhere on
the surface of the dish and the field will be pretty weak.

Where is the most dangerous spot on the big dish?

At the feed--but the feed is really a little antenna without
much gain. Thus, you should really worry about stuff like
open waveguide and tiny antennas more than big horns or dishes
at microwaves.

Jamboree-on-the-air is a great event to promote amateur radio
to Boy and Girl Scouts all over the world. I am sure the 99.9%
of all Hams fully support this effort. I heard and worked
several stations that opened their stations to show ham radio
to the kids and leaders. I enjoy seeing the reactions of the kids
as they talk to others around the country.

BUT... It was very embarassing to have intentional interference
by a very very SICK person who made unacceptable comments
on the air so that my boys and their leaders could hear them.
I apologized and ignored him the best I could, but it still bothered
me a great deal. I know there is nothing I can do about it now, but
I just wanted to express my disappointment in this one person.

If anyone knows anyway to deal with this problem, it would be
appreciated. Obviousely, he never identified himself.

Again, though, thanks to all those hams who did help out.

I for one got a PO box. My friends know where I live, and so the casual scanner user does not. I can give out certain info, and not really worry about it. Speaking of privacy, do you have code words set up with your cable company or other utilities? Why, you might ask. What do you have to do to order a pay per view movie. Call up and order it? How do they know it is actually you. Make sure you have them ask a code word before making any type of changes to your system. How would you like itif someone would call up the cable company, give your phone number etc, and say order a $50 pay per view event....Just a thought.....

I think you need to find another club.. Here in the Southland we have
a group called SCARA. This Club or Group has been in existance for
a little over three years, and our membership stands at 237. Of this
number 175 are newcomers to the Hobby, ie KC, KD and KE calls...When
a call goes out for assistance you will find a mix of the Old and New
responding, from help with a tower raising, to planning a Dinner or a
Breakfast, the Newsletter committee is made up a Two Hams with about
10 years in the Hobby and the rest are newly licensed Hams under a
year.
This raises a question, What are you looking for, and what have you
offered this club you belong to.. If they dont fulfill your needs, look
elsewhere. We the Olde Pharts make it a point to help and be available
when someone comes looking for advice, and fully support newcomers to
the Hobby, (its only a Hobby) I think you need to look around before
you start painting everyone with the same brush. If your experiences
have been that bad it might lead others to think there is something
wrong with you and your attitude. Get out and look around and stop
the complaining, do something, be somebody.

> I'm not real bright.....

I love these "keep it simple" challenges...get flamed every time I answer
one!

Obligatory caveat: The following is a gross oversimplification and most
anybody can quote exceptions.

If you can get up a 5/8-wave vertical element (82.5 feet or thereabouts),
it'll work _much_ better than any of the short, trapped antennas. If you
can get up a full quarter wavelength (33 feet), it'll also work much better
than any of the short, trapped antennas. With _any_ of these antennas,
including all the short ones, the trapped ones, the gapped ones, and all
the rest, they will work _much, much_ better with a bunch of radials. For
the number and length of the radials, check any of the recent editions of
the ARRL Antenna Book. It's a tradeoff among efficiency, radiation angle,
your space for radials, and your wallet.

> and seem disinterested in the idea of taking the exam...

Maybe it's because our area is too crowded, but here in southeastern PA
there's an average of better than one exam session a _week_, and all seem
to be fairly well attended. Ours (monthly, last Thursday of month) has
had, I believe, only one session during the past several years when nobody
showed up, and two to five is fairly typical. We just tested about 15 at
the hamfest this past Sunday.

And we get 'em all the way from people who don't answer even half of the
questions correctly, or don't get _anything_ down on their code-copy sheet,
to people who ace the written, or come for the 5-wpm and pass the 13.
You're right, it's hard to feel sorry for the people who are obviously
unprepared. The ones I feel for are those who miss by one or two
questions.

A suggestion--do you run novice/tech classes? These have been a major boon
to our club, bringing in most of the hams who are currently most active in
the organization. And a good class produces people who are more likely to
pass the exams.

Upcoming in your November TCA

ELECTION of RAC Board of Directors for 1995
From Ken Pulfer VE3PU

The RAC Election committee consisting of Eric Ilott VE3XE, Clayton
Bannister VE3LYN, and Ken Pulfer VE3PU, met in Kingston on September 14th.
Nominations of candidates for the RAC Board of Directors have now been

received and validated. The situation for the seven regions is as follows.

Pacific: Two nominations were received for the Pacific Region, but one was subsequently withdrawn. As a result, Dennis Livesey VE7DK, from Delta BC is unopposed and has been declared elected by acclamation.

Alberta/NWT: Ken Oelke VE6AFO, from Calgary the current Board member for Alberta/NWT, has been renominated and is unopposed. He has been declared elected by acclamation.

Midwest: Two candidates have been nominated for the Midwest region, Bob Shehyn VE5FY, current member of the Board from Moose Jaw Saskatchewan, will be opposed by Dave Panting VE4EF from Winnipeg Manitoba. Ballots have been mailed to RAC members in the Midwest region.

Ontario North: There are three candidates competing for the position of Board Member from Ontario North. Bob Bishop VE3JAB, current Board member from Thunder Bay, will be opposed by John Connor VE3TG from Nepean and Ron Walsh VE3IDW from Kingston. Ballots have been mailed to RAC members in Ontario North

Ontario South: J. Fergus Kyle VE3LVO, of Burlington Ontario, is running unopposed in Southern Ontario. He has been declared elected by acclamation.

Quebec: Pierre Roger VE2TQS, current member of the Board from Montreal, has been nominated and is unopposed in the Quebec Region. He has been declared elected by acclamation.

Atlantic: No nominations were received from the Atlantic Region before the September 1 deadline. In accordance with the constitution, nominations have been reopened, with a deadline date of December 1, 1994.

All members from the Atlantic Region are hereby notified that nominations of candidates for the position of RAC Director (Atlantic) will be accepted until the revised closing date of December 1 1994.

Except for the Atlantic Region, all ballots must be received by the Secretary of RAC before noon, November 18th 1994. The results will be announced in December, and the new members of the Board will assume their responsibilities on January 1, 1995.

Hams hope for peace between Jordan and Israel

According to HaGAL International - Israel Ham News, peace between Jordan and Israel is only months away. King Hussein JY1 of Jordan, has been quoted in the press as having said that a full peace between the countries will be signed by the end of 1994.

Telecommunications ties have been made between the two countries and you can now phone directly. Jordanian hams have also been heard on the Yatir (145.325 MHz) repeater in Israel. They seem genuinely anxious for cross-border contacts. They are also setting up more repeaters in Jordan. There are now 11 VHF repeaters and 4 UHF machines. The Jordanians are also expressing interest in Packet radio.

Ham News reporter Ron Gang 4X1MK describes the QSO's with Jordanian Hams as "heart-warming". "A real good feeling comes across that our partners to the East are just as enthusiastic about this peace as we are," he continues. "The Hams there exude friendliness and warmth. There's hardly anything better than making new friendships! Ya Salaam!"

Nobody knows the official opinion of the Jordanian government on these cross-border contacts so the names of Jordanian Hams were not published in the article, just in case.

Coming soon to an orbit near you

The opening shots in the next revolution in marine communications are about to be fired. The battleground will be space, and the rebels' weapons will be communications satellites. That's according to a special report appearing in September 1994, Sail magazine.

As early as this time next year, according to the report, mariners should be able to bring aboard pocket-size message transceivers that can send and receive data anywhere on earth and portable telephones that make voice connections up to 200 miles off the US coast. In 10 years the old guard - VHF, SSB, Ham, ERIRB - could be systems of the past the report says.

Relatively low cost satellites and land systems, combined with compact, efficient radio hardware and software are credited with driving the changes.

FM mode Amateur satellites

Of the 18 available Amateur satellites presently in orbit, four offer, at various times, transponders for general use. Two of these, AO-21 and AO-27 operate on 2m and 70cm. Being low earth orbit satellites, both are overhead for short periods, usually ten to fifteen minutes per pass. There are about six passes per day, three morning to mid-day and three at night.

OSCAR-21, or AO-21 has a unique repeater that lets you input on 435.016 and output on 145.987. To copy tune 145.990 or 145.985. When you listen for AO-21 you will soon notice that at the first part of the pass you can hear it better on 145.990, then as the pass progresses hear it better on 145.985. All you need to listen is a rubber-duckie equipped handheld.

This quick introduction to AMSAT was condensed from a more complete article written by Art Rae VA3RAE, in the Windsor Border City Radio Club Newsletter.

HF Band Planning Committee
From Pat Doherty VA3GD

The Committee now has four representatives from three regions. Representatives are still needed for Atlantic, Quebec, Ontario South and Pacific. RAC elections are now taking place and three of the areas will have new directors. If any person in the above areas has an interest in being the HF Band Planning Representative please forward a resume of Amateur activities and interests to:
Pat Doherty VA3GD
HF Band Planning Coordinator

RR#1-10035 John Street Road
Murillo, Ontario P0T 2G0
Phone (807) 935-2253
Fax (807) 935-2134
E-Mail: pat.doherty@oln.com
Packet: VA3GD@VE3TKA.#NON.On.CAN.NA

Upon receipt of your resume the respective RAC director will be contacted for comment and approval. You will receive a reply as soon as possible.

Canadian Amateurs in the respective areas where there are appointed representatives should direct any comments on HF band planning to one of the persons listed here. Please take the time to express your thoughts about the future of the HF bands.

Antenna nightmares

There is a story in the Chilliwack Amateur Radio Club Bulletin about a Vancouver Amateur who learned the hard way how tough it can be to get an antenna erected in some communities. His plan was to erect a tower sufficient to support a 20 foot dish for EME (earth-moon-earth) communications. He ran into local requirements for a building permit if the antenna was higher than six feet above the ground. The building standards he was required to meet resulted in the construction of two concrete pads one 10'x10'x6' and the other 8'x8'x6' to support his tower.

1,000 DXCC countries?
From Algoma Amateur Radio Club Bulletin

Don't jump out the window yet, but John Naisbitt, one of the world's leading trend forecasters, has predicted that from today's roughly 200

independent countries (not counting ARRL's rocks, shoals and reefs), the world will have an increase to 300 countries by the turn of the century. During the 21st century this is expected to increase to 1,000. This will result, Naisbitt predicts, because of increased nationalism and tribalism around the world. Canada's Quebec could well be a future example.

How about getting on the DXCC Honour Roll when you will have 950 or more confirmed countries to qualify?

RAC First National Convention trivia
From Calgary Amateur Radio Association Key Klix

Attendance at the RAC first national convention in Calgary this past July appears to have topped 1,000. Those who travelled farthest included Edward Leppard VE1AYY from Halifax County, NS and Michael Morrison VY2CO from Charlottetown, PEI. The youngest Ham who registered was eight year old Alex Vogrinetz VE6YIC from Lamont, AB. The oldest to register was Bill Savage VE6EO from Lethbridge, AB at 86. Bill Kennamer K5FUV from ARRL DXCC desk checked 5,400 cards. That apparently topped the Dayton Hamvention this year.

The Friday evening wine and cheese party was attended by 407 people. There were 30 seminars. The RAC Forum drew 450 people. The Annual General Meeting was the largest in the history of any Canadian Amateur Radio national organization with more than 300 in attendance. The Saturday evening banquet was attended by 356 people. The BBQ was just short of that with 326 people attending.

Victoria BC repeater 25th Anniversary

The Victoria Short Wave Club will celebrate their 65th Anniversary with a special dinner at the Masonic Conference Hall on November 26, 1994. This is also the 25th anniversary year for the Victoria repeater.

Montreal repeater sold

The VE2RED repeater has been sold to the Montreal Amateur Radio Club. It was purchased from the Montreal Repeater Organization. VE2RED is said to provide excellent coverage and there is discussion concerning possible future linking to VE2BG. The deal was completed on September 1.

FCC denies morse code exemption for over-65s
From the ARRL Letter

The FCC in the US has denied a petition that proposed exemptions from Morse code exams for people age 65 and older.

Guy A. Matzinger KB7PNQ, of Cheney, Washington argued in his petition that old age results in diminished faculties, and equated those people 65 and older with the severely disabled in terms of passing a CW exam. He proposed the exemption for speeds above 5 wpm.

The FCC said that similar petitions had been denied in the past, because the current Amateur Radio license structure is based on "the desire of the amateur service community," gleaned from thousands of comments on previous

petitions. The Commission also noted that its rules already provide for Morse code exemptions for certain recognized disabilities.

Upcoming events we've heard about...

October 22. The Greenwood Amateur Radio Club Fleamarket, Greenwood Community Centre, Church Street, Greenwood, Nova Scotia. Information line (902) 756-4660.

November 12. The Newmarket Hamfest, Huron Heights Secondary School, Newmarket, Ontario. For information write to the York Region Amateur Radio Club, P.O. Box 28590, Aurora L4G 6S6.

November 26. The Victoria Short Wave Club will celebrate its 65th Anniversary. There will be a banquet on November 26, which past and present members and their spouses are invited to attend. Information line (604) 474-1939 or (604)478-9650.

Special Events Station VF7L

The Fraser Valley Amateur Radio Association will be operating a special event station VF7L from Fort Langley on November 19, 20 and 21, 1994. This event commemorates the 136th Anniversary of the proclamation read by Sir James Douglas at Fort Langley on November 19, 1858 creating the Colony of British Columbia.

Station VF7L will operate on 20, 15 and 10 meters from 1700Z to 2300Z over the three days. A special certificate will be available. Send a 9"x12" SASE and $1.00 to cover postage to:
Fraser Valley Amateur Radio Association
P.O. Box 50
Fort Langley, BC, V1M 2S6.

Upcoming in your November TCA

The November issue of The Canadian Amateur includes important information on how you can help fight EMCAB-2. This is the Industry Canada document that has the potential to force amateurs to power down or cease operation because of the lack of immunity standards in nearby entertainment equipment. This is the most serious threat facing amateur radio in Canada today and deserves your full attention and action.

Also, in the November TCA, there is more coverage of the RAC Convention in July, a request for nominees to the Canadian Amateur Hall of Fame, some thoughtful suggestions by Ken Oelke VE6AFO, guidelines for contributors to TCA, results of the 1994 Canada Day Contest, a report on the Singapore IARU Conference from Tom Atkins VE3CDM, a product review of the Ham Log application software, more tips for the shack from Frank Merritt VE7FPM, plus Letters, Silent Keys, the Swap Shop, propagation forecasts, and regular columns.

853. Passed Tech+ -- the fun begins...

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-17 23:41:53 UTC
From: dmunroe@vcd.hp.com
Message-ID: <CxuCHt.AKy@vcd.hp.com>
Source record: 258361

I passed my exam for Tech+ yesterday! My thanks to the folks here who shared their wisdom with me. Thanks also to the ARRL; the code tapes and the "Now You're Talking" book taught me a lot and made everything easy.

I'll be interested in getting a handheld and also a low-cost HF transceiver for QRP work.

Some questions...

Is there a difference between "twin band" and "dual band" HT's? As far as I can tell from the ads, both are able to transmit and receive on two bands.

Any recommendations for new or used low-power HF transcievers? Also, is there a sort of "QRP club" anywhere?

tnx,

-Dave

854. requesting opinion on handhelds

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 00:25:11 UTC
From: sinned@u.cc.utah.edu
Message-ID: <37v4l7$8t3@u.cc.utah.edu>

I have looked at several kinds and brands of handhelds to buy, and I have decided on buying either a Yaesu ft530, or a Kenwood th78a. I would appreciate anyones opinion on which is better, or ups and downs of either one. I would also appreciate it if anyone would like to give their opinions about a different kind of radio (base set first, or different brands)

Thanks

The Bryantown-Zekiah Swamp VE group (ARRL VEC) has one
scheduled for the 20th of November in White Plains MD
(just south of Waldorf in Charles County).

You might also check with the Maryland Radio Center in Laurel; I think
they are W5YI VEC and give them on the third Saturday of each month.
There phone number from DC metro is 301-725-1212 (ask for Jerry).

Because some people choose to do things in public that should be kept private, you feel it necessary to dismiss gays as a group as "disgusting", and compare us to child molesters and the like? What college was this, again? I thought well-educated people were supposed to be open-minded and accepting of other cultures. Yes, sodomy is still illegal in some states, but not many. That term also applies to certain types of male/female activities, so you might want to make sure you pull the shades and turn out the lights before you get creative with your wife/girlfriend in those states as well. I'm sorry you're disgusted, but I'm not sorry I'm gay. I do, however, have a suggestion as to where on your anatomy you can install your iron re-bar...

Does anyone have a programming cable and software to program a Challenger Viking FM5862 UHF ht laying around be chance? I know that the same cable and software is used to program their UHF mobile and possibly a VHF ht and/or mobile.

I recently came across one of these HTs already tuned to 440 ham band, but I need to program it. The only shop I've found around here that has a programmer wants $25 PER CHANNEL to program it. "Gee, sure I'll pay $375 dollars to program an ht once." NOT!!

If anyone could help me find the cable/software for a reasonable price (or build one) I would be DEEPLY thankful.

Mike Gordon N9LOI mwgordon@solaria.mil.wi.us

Message-ID: <215.4593.1441.0NA70B96@megasystem.com>
Source record: 258272

de Tim, NC7K...
By profesion I am a Estimator for the oldest printing company in Nevada. Paper prices havent moved a inch in 4 or 5 years until August this year. Now paper mills are anouncing price increases almost every 30 days since!

As to magazines being thinner now than in years past, alot of that is due to increased mailing costs per issue. If a piece weighs 1 OZ less that can save thousands in mailing costs.

As to CQ going to Perfect Bind like QST... Its much more per pieces than saddle stitching. Also... CQ's printer might not be set up to perfect bind.

I've learned that things are usually done for a reason and hope the have shed some light on some possible explanations. 73s es DX from Reno, NV (DM09ep) de Tim - NC7K...sk

Jeff,
I took the advanced 19 years ago and the extra 7 years ago.
I currently VE in my area. In my opinion (IMHO), I think the advanced
is more technical and the extra is more operational. I think the
questions, or at least most of them, on the extra test are rediculous,
but took me longer to learn because I don't think I ever heard of them before
nor have I used them since ;-).

873. OMNI-V and grounding problem?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 13:19:52 UTC
From: ham@wam.umd.edu
Message-ID: <380i1o$6sc@cville-srv.wam.umd.edu>
Source record: 258408
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

First, the background for my story:

Second story ham shack, no cold water pipes, about 20'
to nearest Earth ground, maybe more.

Antenna is a dipole in the attic, just overhead. Don't
worry, I keep to QRP.

Equipment:

Ten Tec 961 power supply, Ten Tec OMNI V, MFJ-949 tuner,
MFJ-931 arti ground with counterpoise wire.

Symptoms:

With radio, power supply, and tuner in use, no ground braid,
touching the front (bare aluminum) of the case causes the
Power output meter (and reflected power AND Ic) to increase.

Transmitting into the dummy load results in no fluctuations
when touching the case.

When the ground braid is hooked up, joining the radio, power
supply, tuner, and arti ground (no counterpoise hooked up yet)
the problem is still present, except that simply touching ANY
portion of the ground braid causes the fluctuation to occur.

Obviously, it's not that any part of the case is floating.

CONTINUING: HOOKED UP THE ARTI GROUND...

Tune for maximum ground current, and when achieved, the
case should be "at relative zero potential." Touching
the case STILL has an effect on the meter. Actual power
output (forward) at the tuner is not affected, although
the rig shows higher forward AND reverse power and a
higher Ic.

If one fiddles with the arti ground capacitance controls,
it can usually be set such that touching the ground system
has little or no effect on the measured quantities, but
this is NOT at maximum ground current (no even close).

Obviously, my body's stray capacitance is changing the
characteristics of the "ground" system. But why would
the meter care? Obviously it would, and the radio's
circuits would "see" something changing and react. Any

guesses what's actually happening here?

Technical replies are welcome, the more the better.

I think what you are talking about is "Trunked Land mobile radio." It is
a system by which many users can share a group of freqs by having a computer
at the transmitter control which freqs the radios use. They all listen to
a data channel for instructions from the head unit. That way fire, rescue,
police, etc can share 5-10 freqs and fully utilize them (and selectively
intercommunicate) instead of having 25-50 separate rarely-used freqs laying
around. Cell phone technology is very similar to trunked systems. See the
description in Radio Shack's "Police Call".

The advanced written test is much longer and has more technical questions.
If you pass the advanced written, the extra written should be quite simple.
The code tests for both are the same level of difficulty.

The Advanced exam is MUCH harder than the Extra exam. Heavy on the
circuit analysis and calculations/formulae, light on the theory.

As an Advanced class, your privileges are pretty similar to the
General privs. But when you get to Extra, there's a significant
jump, such as being able to launch satellites, be a VE for all
classes, etc. Anyway, the General to Advanced jump is just a written
test. Advanced to Extra is a two-parter, kind of a "double-filter"
if you will.

Advanced is much more difficult than Extra.

883. ARRL ORder Desk Problems?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 15:30:52 UTC
From: seeler@UPEI.CA
Message-ID: <seeler.141.782494251@UPEI.CA>
Source record: 258382

I was wondering if any one else has had problems with the ARRL order desk in respect to phone orders. I have had problems the last two trys. Once I was double billed for one order - and that took over a month to get corrected. This last time I ordered a copy of the 1994 dig. conference and a number of 1994 QEX issues. I received the billing two weeks later on my visa but had not seen the books so I waited another week before calling in case they were in the mail. I was told they had no record of my order. As before I was told to copy my visa statement and send it in and it would be delt with.

Now - about three weeks after having sent the copy of my statement in (I know the mail is slow - but this slow?) I had heard nothing so I called the order desk again. Once again they had no record of the order or my letter. This is close to two months after the original order and the solution is once again - send another copy of my visa statement to them.

This seems to be a little too much - by the time I pay for the calls, mail etc the costs are going to be quite high and I am looking at no resoulution for 2 - 3 more weeks perhaps. Is this a common problem with the ARRL publications group in others' experience? I would have to say I could not recommend this method of ordering to anyone else esp when I am billed but there is no record of the order even.

Is this a misprint of FT-223?

The FT-221 is a synthesised multimode rig. Current secondhand value on the UK market is about 200 to 300 pounds (US$ 300 to 450) depending on condition.

> What is it all coming to?

If it's any consolation, it's just as bad in Europe. Last week I drove from my office in London to the Head Office in Paris during a humungous lift on both 2m and 70cm. In spite of the excellent conditions, I wasn't able to work anybody due to the appalling manners of a collection of non-mobile G, F, PA, PE, PI, ON and DL hams working through the repeaters, and (I kid you not) agreeing to exchange QSL cards!!

Us mobiles (whom, I thought, the repeaters were actually meant for) didn't get a look in!

A special LID of the year award to Monique, F1*** Monique, if you're reading this, did it occur to you to actually listen on the input for all those rare DX stations that you thought you were working?

Hello! You got a name?

> Where do I get a license??

It depends on what country you're in!

If your lucky enough to live in the UK, you can download a file called HAM-FAQ.TXT from the BBS listed below which will tell you everything you need to know.

If you're one of these poor unfortunates from one of those dreadful foreign countries, let me know which one as I may yet be able to help.

Cheers
Mike

Hallo !

I just think about the possibilty of the PGP-Encryption-program
in amateur radio:

A ham is only allowed to use "open speech". But signing a message
with the program PGP might be ok.

It could reduce the possibility of pirates in amateur radio using
others call sign to work in Packet Radio.

Any comments are welcome

This strikes me as a very good point. In CT we have a very
solid repeater club. They run a great repeater, we have a few
foxhunters, and a few packeteers. The membership seems to be
looking for more activities, but the club is interested in running
repeaters. Point being... the club has no responsibility to meet
any other needs. There is no implicit democratic structure, and if
you don't like it, find a club that fits your needs.

You will find a different make-up from club to club, and finding
one that does the things of interest to you will (may) take time.
I recommend asking some current members about activities, support,
rules, and organization prior to shelling out any cash. If you do
join and don't like it, just let your membership lapse. pretty simple.

897. MFJ Versa Tuner III Woes

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 17:28:59 UTC
From: dgontz@po-box.esu.edu
Message-ID: <3810kr$78v@jake.esu.edu>
Source record: 258398

Hello all ....

I have an MFJ Versa Tuner III that I've had for about two
years but have only recently had the opportunity to use and I've run
into what I consider a serious problem.

This weekend some friends came up and we put up a 160M half
wave dipole. This is the first dipole ever really connected to the
MFJ. I also am using an Ameritron ALS600 amplifier with the runer.
The amp is rated at no more than 800 watts peak -- which is roughly
half the power rating of the tuner.

After testing everything out, I started to use the station.
Everything worked for about two hours. Then I started having trouble
tuning on 160M and 75M. I noticed I could see bright flashes behind
dials on the tuner. FInally, the tuner just quit and I wasn't even
able to receive with the tuner switched in.

Upon opening the tuner, I immediately saw the problem. There
is a small bundle of wires run from the rear connectors to a circuit
board at the front of the tuner. The wire bundle was run right snug
against the inductor coil. The point where the wire went snug had a
nice black burn area. I inspected the wire and it seems nothing is
actually burned through. I just put a nylon spacer between the wire
bundle and the inductor and things seems to be working okay again.

Has anyone else experienced anything like this? Could it be
my MFJ tuner was built improperly? Is it possible that the Ameritron
is too much load for the tuner even though it is rated at 1500 watts?
My friends suggested that perhaps the problem was because the antenna
mismatch caused the voltages to go to high inside the tuner. I think
that's why you buy a tuner in the first place and the real problem is
the design that ran that wire bundle next to the inductor.

Any comments, suggestions or hints are welcome. Especially
since this is the first time I've been able to work anything other
than 10M and 12M.

The Advanced written test is probably harder to study for because you have
to learn more electronic theory rather than memorize who can launch
satellites... However, neither of these present-day written exams is
nearly as difficult as the General written exam that I took 18 years ago;
you had to draw schematics for common circuits, and the questions and
answers weren't "canned" like today's exams.

Are the Q codes required for the test in Germany? If not, the best
way is to keep a list of the most common ones at your operating
position to refer to as you operate. Repetition is the best way to
remember anything. Otherwise, try to invent little memory tricks that
work for you. Good luck!

902. Picture file of homebrew 2M packet radio & antenna in a.b.p group

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 18:20:14 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseCxvs9t.8HK@netcom.com>
Source record: 258417
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.homebrew

FWIW, I posted in the alt.binaries.pictures and a.b.p.misc groups a JPG picture file of my homebrew 2 meter indoor J pole antenna and a homebrew 2M radio (using the "guts" of a Motorola HT220 and an output RF amp to make 8 watts on packet). It's quite old, but it works well. Works better when I used a short length of "Ethernet" coax (equivalent to RG8U, 50 ohm) to feed the J pole.

The picture file is UUencoded, run uudecode to get the JPG file.
B&W photos with color labels, JPG quality around 65.

903. Callsigns.

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 18:22:00 UTC
From: n5ljv@uh.edu
Message-ID: <18OCT199413225024@elroy.uh.edu>
Source record: 258403

The following comments DO NOT reflect the ham population in general,
rather just one individual that have the unfortunate luck of knowing.

This particular fellow is a no-code Tech who is still an avid CB'er.
His "CB" rig is a modified Uniden 10 meter radio with a 500 watt amp.
While this person loves to operate VHF and UHF repeaters, he also enjoys,
rather frequently, moving his "CB" rig into the ham band and shooting DX.

What's wrong with this picture?

For starters, his amateur license does not authorize him to operate
in the amatuer 10 meter band. Second, if he DID have a Tech Plus, he
would still be illegal because of his 500 watt amplifier. Third, he his
operating illegally on the CB band as well -- the 500 watt amp again,
plus the modified 10 meter radio.

Now before all the no-code Techs start flaming me, I am not, in any
form, throwing stones. I am simply bringing a topic up for discussion.

Here's the topic:

Now that the FCC has their new computer online, the FCC should program
their computer to issue DIFFERENT class callsigns to EACH license class.
I believe that if this particular ham that I mentioned above would have
a class-distinctive callsign, other hams would know that he is not
authorized on those frequencies. This problem is also compounded because
in most call districts, Technicians and Generals are assigned Novice calls
because 1x3 N-calls are gone.

Since there is such a large pool of amateur callsigns that are available
for issueing, I don't think it would be a problem. The only hurdle would
be getting the FCC to agree on this issue and impliment the plan.

What do you guys think? Have you ran into the same problem that I have?
I think with some planning, some backing by the ARRL, and some letter
writing, this idea could become reality.

906. ARRL to change "Silent Keys" label in QST?

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 18:47:54 UTC
From: md@pstc3.pstc.brown.edu
Message-ID: <38158q$9rv@cat.cis.Brown.EDU>
Source record: 258401

With the popularity of the no-code license, its only a matter
of time, if it hasn't occurred already, that a no-code tech will
die and have his/her call listed in the QST "Silent Keys" column.

Clearly, we need some "Truth in Advertising". These hams can't be
silent "keys", because most of them were probably too lazy to touch
a key (or even know what a key is, for that matter...).

Therefore, I think its incumbent upon the ARRL to split the "Silent
Keys" column into two sections: a "Silent Keys", for real hams that
know what a key really is, and a "Silent PTTs" section, for the 2 meter
good-buddy box users.

I urge all to write to the QST editor and encourage this course of action.

>>Recently I have read several books about the US Navy in WWII using
>>sound-operated phone systems.

>>How do these systems operate? What is the electronic theory behnd it?

>(Sound powered?)
>Just need a large receiver, with a speaker-like voice coil, and low loss
>transmition, probably with step up transformers for high voltage/low current.

Sound-powered telephones have been and are still in use aboard all Navy ships. When you see a picture/movie/video of a sailor with a chest mounted mike and a headset on, that's a sound-powered 'phone. Ordinary-looking handsets are also used, but the chest mike/headset blocks out distracting conversation and still leaves one hand free (both when not pressing the push-to-talk) for writing on a plotboard, etc.

Sound pressure waves from the speaker's voice move a diaphram which causes a change in the magnetic fiekld of a permanent magnet and induces a small voltage in a coil. This small electrical voltage is transmitted along a wire to the receiver. Headsets and mikes are in parallel across the entire circuit, which is essentially a single hot wire and ground (I use the term "hot" to mean "active"), so everyone can hear everyone else. There is no outside electrical connection of any kind, so as long as the wire is intact the 'phones work even if the ship is DIW and has no power.

If a circuit is broken by a wire being cut, unless it is shorted the two portions of the circuit still work; it just becomes two separate circuits.

Different circuits are set up on the ship and routed separately to provide redundancy, thereby ensuring that all parts of the ship can remain in communication (bridge to CIC, CIC to weapons, bridge to engine room, bridge to damage control, etc., etc., etc.).

The ystem hs been in existence since before WWII and has proven so effective that no new technology has ever replaced it. It is simple, cheap, effective, requires no outside electrical power, and has proven itself under the worst conditions.

There is not, to my knowledge, any other communication system
except ship-to-ship semaphore ("flag-waving") which is as reliable
(and flag-waving doesn't work at night! :-)

The thread of this discussion is a social issue and is away from the topics of amateur radio. How about moving this discussion to another news group?

Thank you, in advance,

Bob

Your tuner was built improperly.

> Is it possible that the Ameritron is too much load for
> the tuner even though it is rated at 1500 watts?

No, if that were the case you would probably be seeing
the tuning capacitors arcing between the plates.

> My friends suggested that perhaps the problem was because
> the antenna mismatch caused the voltages to go too high
> inside the tuner. I think that's why you buy a tuner in
> the first place and the real problem is the design that
> ran that wire bundle next to the inductor.

If you were matching 50 ohms to 50 ohms, the voltage across
the inductor and capacitors would be higher than that on
the transmission lines. The antenna tuner is a tuned
circuit of sorts and a large circulating current flows
among the capacitors and the inductor. This develops high
voltage as it flows through the high reactance of, in this
case, the inductor.

For a typical tuner, the tuning elements should be spaced
at least two inches away from any other wiring. More is
better. And that wiring should be shielded with the shield
grounded at both ends.

And your friend is right is one respect: As you try to match
to loads with high reactance (eg: an 8-foot whip on 80m),
you will find high voltage on the tuner output port that may

limit the power you can run.

910. Re: Any hams using IRC chat??

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 22:13:14 UTC
From: s2202629@np.ac.sg
Message-ID: <381h9q$1j8@nova.np.ac.sg>
Source record: 258158

I think ham on IRC would be cool. I've met one other ham on another chatline, and he was very helpful in answering most questions I had.

Catch is that, I can't IRC (no client on this system - I've got a shell account), and I have no access to the compiler to compile my own (control freaks!). So, how else can I do IRC? Are there a) precompiled binaries, or b) telnet-to-IRC servers that won't bog me down with too much lag.

Would appericiate talking to other hams...

Rgds!

I think an easier solution would be for you to file a
complaint and for the FCC, after investigation, to issue
an NAL to your friend.

No offense intended, Brad, but I just hate it when
someone proposes a global solution to a local problem.

912. ### About 2nd hand rigs, user manuals & copyright laws...

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-18 22:22:23 UTC
From: s2202629@np.ac.sg
Message-ID: <381hqv$1km@nova.np.ac.sg>
Source record: 258159

I've been wondering about the following, since I'll be purchasing a 2nd hand rig soon.

Most of the time, when you purchase a 2nd had rig, it would probably come with the user manual. What if it doesn't, do you have the 'right' as the owner of the equiptment to make a photocopy (xerox?) of it, and use the copy? Or will copyright laws kick you for that?

Or do I have to do something, like, write to the manufacturer, and purchase a new manual for him, or if he doesn't have anymore in print (perhaps a very old rig) to obtain 'written permission' to make a copy of it?

I figured that 'if I owned a manual, I can copy the manual for my own use' don't really stands, because, what if - Someone purchased a new rig with a manual, copied the whole thing, and sold the original manual off to someone else, and used the copy.

I know this isn't _REALLY_ amateur radio related, and should perhaps be tossed into some legal-related usegroup, pardon me if it's really off topic.

Rgds.

Maybe the 'no-code' dude is on packet or TCP/IP in which case s/he uses a keyboard and is, therefore, eligible for the "Silent Keys" column.

I've met too many general and advanced class hams that had no idea what the code is; they can send their calls and that's about it.

Don K6LTS
39 years of hamming and getting more and more cynical... maybe I should retire to 75M SSB with the rest of the 'no code' hams...

i would say trunked land mobile radio as another post had said.

it's basically a combination of PL and repeater systems. i don't have
all the details behind it but i installed a few of these systems this
summer. If you have access lookup for GE/Erricson TMX/MDX radios
they use G-Marc and EDACS systems. Very nice on 800 Mhz.

sorry i'm not much more help

Stanley is replying to Jeff who replied to ALL on 17 Oct 94 05:49pm

JH> Whats your opinon? Is the written Advanced class or Extra class exam
JH> harder? I am just asking about the written test not the
JH> code..thanks..Jeff
Not counting the code, the Extra was the hardest for me. I would
think in most cases the Advanced would be the hardest because of
the math involved. Guess I just got lucky on the Advanced, got it
on my second try.

Source record: 258410

I've upgraded to ver 4.0. No problem with the updating. The problem
that I have is while in packet, after a while a spot will come in that
will bomb the program giving "Error/18013180333000235061018.
I tried Jack and Dean, but they are either out or the answer machine picks
up. Does anyone know what the error code means? So far the program has
bombed out three times in two days with this same error. It always happen
immediately after a DX spot comes in.
Thank you any help. 73 de/Russ (KA1ERL)

919. Re: Give me your Definition of Ham Radio!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-19 02:22:06 UTC

>In our household there are three lincensed hams myself kd6lbn and 2 yls
>kd6lzo and kd6kpj. Our definition of hamradio is as follows.
>
>a group of old dinosours

I believe there are people of all ages in this hobby.

>no help for beginners. In fact beginners are not really welcome in the
>local arrl club.

Try another club.

>A national organization (arrl) that behaves as thou they have a mandate
>of the hams in the USA but with just a little over 25% membership they
>don't.

The ARRL speaks for its membership via its local directors. If you're
a member then feel free to provide complaints *and* suggestions to
your local director (heck, even if you're not a member feel free to
complain).

Without the ARRL we surely wouldn't exist today (study the history
of ham radio and then you'll certainly agree).

>A national organization (arrl) that totally is refusing to move in to
>the 21st century and hopes to keep ham radio in the time frame of 1930
>to 1960.

Huh? Paging through recent issues of QST and through the Handbook I
don't understand how you could make such a statement.

>And if you think this is a joke

A very bad joke!

>your had ought to listen to our local
>nets and see that of the younger members trying to check in and how many
>of them are recognize unless they are part of the local klick.

Maybe the younger members ought to form their own net.

>You ought to see what happens when a new commer joins the club and asks
>for help. You might as well walk away and save you breath for asking for
>help is a waste of time.

Judging from what you've said the problem might not be with the members
of the club but rather with your attitude.

if there's _one_ thing that i thought i had learned about hams, it's how tolerant and friendly they are. people from all walks of life are hams and i have found that people who otherwise would have had nothing in common with me have been happy to talk to me just because i share the love of radio with them. i'd have thought the "heterosexual only" attitude would have been ignored by people who have (to me at least) been some of the most tolerant i have ever met.

just my measly .02 worth...

921. low power fm short range xmitter

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-19 03:33:14 UTC
From: jim_b@ix.netcom.com
Message-ID: <38241q$h3b@ixnews1.ix.netcom.com>
Source record: 258339

Hi.

I am interested in information on short range fm transmitters. I have an application in mind that calls for transmitting up to 100 feet from the transmitter location, to be received on a radio such as a Walkman or similar FM radio. Stereo would be a nice plus, but it is not required. Also, if the only solution that satisfies requires building a device from scratch, this is acceptable.

I have tried several inexpensive commercial devices, but they are all unsatisfactory, in that the signal is loaded down with static or other noise.

If anyone has information that might be of help, please e-mail me at jim_b@netcom.com. I apologize for the fact that this is not quite an amateur radio topic, but I could find no better starting point. If anyone can suggest a better forum for this type of request, please let me know.

Thanks for your assistance!

> Whats your opinon? Is the written Advanced class or Extra class exam
>harder? I am just asking about the written test not the code..thanks..Jeff

That's a trick question, Jeff. :) The Advanced test covers more material
while the Extra covers less material but in greater depth.

For someone new to radio/electronics--someone trying to work their way
through the exams as quickly as they can--the Advanced will probably
represent the greatest difficulty just from the amount of new material it
covers. For someone who has been around for awhile, though, a lot of
the material will be familiar and therefore less daunting.

The Extra exam, while it covers less ground than the Advanced, covers
its material in greater depth (when's the last time you manually calc-
ulated circuit impedence with the answer expressed in polar coordinates?)
and detail.

So like I said, Jeff, it sort of depends upon where you're coming from.

Have MFJ-1214PC for sale. Hardly used. Comes with software.

Full Color FAX

Use your computer and tranceiver to receive, display and
transmit brilliant full color news photos and incredible WeFAX
weather maps with all 16 gray levels. Also receive/transmit
RTTY, ASCII and CW.

Animate weather maps. Display 10 global picture simultaneously.
Zoom any part of picture or map. Manager lists over 900 FAX
statios. Automatic picture capture and save.

Has been used only to receive so far. Works well. MFJ sells
for $150. Asking $110 but negotiable.

73,
Daniel

928. TS-120-s problems, help!

Hi, thank you for reading this:

I recently purchased a TS-120-S hf xceiver, and it seems to work well on 80 and 40 meters, however on 20,15, and 10 meters, it is extremely unreliable, iat times the xceiver seems to go into an autoscillation mode where the carrier goes bezerk (out of control!) and there's no modulation posibbleches,. I was able to control the xceiver onc e in a while and regain control of its normal operation by, playing with the antenna tuner(even though the swr was perfect anyway) and all the band(with the exception of 15) seem to work ok when using the dummy load.

Can anybody help me, any leads,hunches experiences, anything will be appreciated!.

Thank you!

>>help is a waste of time.

Wow, things must be a lot different in your part of the country. Here in southern Indiana/northern Kentucky newcomers are welcomed with open arms. It has been my experience that the more "seasoned" hams have been eager to help the new guys form good operating practices and get excited enough about ham radio to want to upgrade.

As far as the clubs go, around here clubs are fighting for the no-code tech's membership. What better way to turn the new guys into good hams than to begin associations with guys that have been in the hobby for a while? Everyone seems to be willing to help in the club I am a member of. If it weren't for the "old timers" I might not have ever even become a ham.

What? That's 1976. I don't know when the FCC changed from blue books to standardized multiple choice exams, but I *know* that it was prior to 1964 when I took my General exam. I recall the OTs telling me how much easier I had it than they did when *they* were licensed. The First Class Radiotelephone exam I took in 1963 did still use blue books. However, it was easier than the amateur exam.

Excuse me, but operating simplex on a repeater input is very bad
form indeed. Our FCC would consider it malicous interference if
it were done deliberately. Of course QSL cards obtained by working
stations via repeater don't count for score in the DX games, but
I fail to see why you should complain if stations want to exchange
QSL cards to acknowledge an unusual contact made through a repeater.
They may prize it as much as you do your score tokens.

936. BPR2000 and Golay code

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-19 11:52:35 UTC
From: todd@wrtfac.day.cdc.COM
Message-ID: <385.9410191152@wrtfac.day.cdc.com>
Source record: 258227

I am working on building a transmitter controller for a Motorola "BPR 2000" Series display pager. I have some documentation from Motorola, but the paging format information lacks the detail I need to program the controller.

The first question is about the logic encoding. Is the carrier frequency just shifted to encode the ones and zeros? How much is the carrier shifted, and in what direction for a one or zero?

The next question is about the 18 preamble words. It is said that all 18 words are the same, and each word is 23 bits. Also that the preamble word is selected from a code set of ten. What are the ten preamble codes, and what part of the code plug number determines which of the ten is correct for a pager? Does the preamble word use the (23,12) Golay code, with 12 information bits and 11 parity bits?

The start code is made of two 23 bit words. What part of the code plug number determines the start code, and how is it encoded? Is the start code also 12 information bits, and 11 parity bits?

The address is also made of two 23 bit words. It would seem that part of the first 6 digits of the code plug number include the address. So how do you figure the address from the code plug number? Does the address use the (23,12) Golay, with 12 information bits, and 11 parity bits? If the address only has two words with 12 information bits each, then that is a total of 24 bits for the address, allowing a total of 16,777,215 addresses. The Motorola theory manual claims that only 400,000 address codes are possible, and this conflicts with what can be encoded into 24 bits. Even if they were using BCD in the 24 bits, that would allow 999999 possible addresses, so how did they come up with the 400,000 number?

Each pager has a 4-call capacity, with each call represented by one address. So each pager has 4 addresses. How are these determined? Which address is for "call 1" (tone-only source 1), "call 2" (tone-only source 2), "call 3" (tone & data source 1), and "call 4" (tone & data source 2)?

And then we have the data blocks of 8 words, 15 bits each. The data blocks use a (15.7) Bose, Chaudhuri, and Hocquenghem (BCH) code. What are the details of this BCH code? How many bits of information can be packed into 15 bits using BCH? How are the characters encoded? What characters are supported? (0-9,Abcd,space,dash)? Is the 1/2 bit space between data blocks always the opposite polarity of the next bit?

With the fields that use the (23,12) Golay format, how are the parity bits calculated?

The timing seems to be clear, 300 bits/sec for preamble, start, and address. With data and comma bits at 600 bits/sec. The one question I have is about

the 1/2 bit space before the data block, is that 1/2 of a 600 bits/sec, or 1/2 of a 300 bits/sec?

>silent "keys", because most of them were probably too lazy to touch
>a key (or even know what a key is, for that matter...).
>MD

Most radios have a Key Line, regardless of mode - i suppose you'll want it renamed to something else on voice radios like Key Lime (Pye equipment) or something.

If they did change it it would be to something truly neutral and less romantic like "Obituaries" or something. Of course, if you had the job of putting it together, you could call the column "Denigan's Deceased" -- same thing happened here when they put in a "mailmobile" system for hauling things around the factory - made up of a "engine" and a bunch of towed racks...Ted had worked hard to get this bit of automation in his plant and so it was felt that it needed a name -- a vote was taken and the #2 choice of the employees:

Ted's Loco.

(#1 was "Computer Tooter" but we think the voting was fixed...)

And by the way, are you sick or something? this has to be about the lamest flame bait you've ever written about technicians. or have you mellowed in your old age?

When you buy the MFJ1270C, the modifications are listed in one of the
manuals that comes with the unit. The series of CQ articles in Aug/Sept
1993 (I think) by Buck Rogers also describes the modifications.

|> help is a waste of time.

Richard -
I have heard this complaint before, but let me paint a
different scenario for you. Imagine someone who gets his
ticket at age 35 and shows up at the local club meeting
for the first time. During the meeting, anyone who is new is
asked to stand up and be acknowledged. Imagine that after the
business part of the meeting is over, and coffee is being served
at a break, numerous club members walk over to this newbie ham
and talk about where/how to get a rig, antenna's, what the club
does, who has what specialties, interesting events coming up,
and in general making that person very welcome. Imagine this same
club working with several area schools to get programs running
in them with regard to ham radio, including supplying books, rigs
antenna's etc. Imagine young teenage ham's (and younger) being
eagerly welcomed into the club with certain individual's immediately
"fighting" for the right to Elmer these youngsters.

Well, guess what. It doesn't require any imagination at all!!! What
I've just described (in part) is my own experience in my local
radio club. Please do not throw out the baby with the bath water.
You may have run into a lousy/clicky club (btw, I am not implying
that my club is perfect, ain't no such animal). This doesn't mean
anything except that THIS club is bad. It does NOT mean that all
clubs are bad. I suggest you try and find another club, even if you
have to travel a bit to do so. A good club is worth it.

And, as a last resort, start your own club!!!

Source record: 258300

Besides being in somewhat poor taste and insulting to no-code
tech licensees (which we've come to expect from Mr. D.), Mike
may actually have a point about renaming the "Silent Keys"
column. Some other ideas:

Eternal QRT
Permanent QSB
Gone to that great DX contest in the sky

Hmmm, given these choices, I think "Silent Keys" is a pretty
good name for the column.

I know it seems like a lot of trouble, but I would be inclined to
write a letter detailing your experiences and address it to someone at
a high level in the organization. Explain the sequence of events, express
your concern, and tell them that as a paid League member (assuming you
are; if not, ignore this part) you are very concerned with the image this
kind of problem projects to the ham community at large and the members
in particular. Be polite, but also firm in your desire for an
expeditious resolution of the problem.

The bottom line, I believe, is that if the League is going to offer
these kinds of services they need to provide them with the same efficiency
and professionalism as a for-profit company does, and if they cannot meet
those criteria then their reputation as a service organization for the
amateur community will suffer. It is up to us, the members and users of
those services, to gently remind them of that fact if the quality of the
service indicates that they may have forgotten the correlation between
good service and loyal supporters.

Polite, written expressions of concern regarding marginal or
unsatisfactory service usually yield excellent results, in my experience.
Give it a try.

Well, if they change the name of the column, why not "Pickled Hams"
for title? That assumes, of course, that everyone is embalmed.....

Maybe "Final QRT" would be a suitable choice.

: This particular fellow is a no-code Tech who is still an avid CB'er.
: His "CB" rig is a modified Uniden 10 meter radio with a 500 watt amp.
: While this person loves to operate VHF and UHF repeaters, he also enjoys,
: rather frequently, moving his "CB" rig into the ham band and shooting DX.
Turn this person in to an Official Observer, or to the FCC. Other nifty
ideas incude a pin thru his coax.

It would be simple if everyone's call reflected their license class, and
thats how it once was. But think about it for a minute. I know lots of
old timers who are generals or advanced but have 2x3 calls. And extras
with 1x3s. I'm working on my extra code now, but I don't want a ad4??
call when I get it. I want to keep mine until they do the requested call
sign thing.

If you have a doubt about someone's license class, just telnet buffalo
and look them up. I'm sure it will diferentiate between coded and
code-free techs within a year or two.

Well, I waltzed on down to the testing location on Saturday past, intending to take the 5 wpm test. The examiner lobbied me heavily to take the 13 wpm, saying that it would make the 5 seem slow and easy. I took the 13, and passed with 100% on the questions (not near that well on the copy, but I got enough, I guess...) What a deal!

Fired me up so much that I put up a 130' dipole on Saturday, and put myself on the air. I actually got someone to talk to me, and they didn't lose their patience! All the way from Ark! What a trip--I'm *still* fired up.

As a result of my very brief experience so far, I've got a question: in my other two contacts, the other party sent so fast that I could hardly copy anything. When it was my turn, I asked him (her?) to QRS, but that seemed to turn them off, and they said "let's QRT," (blaming it on QRM, which might, or might not, have been the case) which they promptly did before I could get a name, location, ar any other meaningful interchange going. Question: is there some CW protocol that would allow an interruption of a message in progress in order to get the other party to slow down? It seems to me that what probably gets these folks hacked is that they spent a lot of time keying in a nice long informative message, and this new kid comes along and says the he (I) didn't get hardly *any* of it. From their point of view, that's not a very satisfying interchange.

I did notice that I seemd to be sending my callsign interchanges faster than I was ready to copy, so I have deliberately slowed that down in the hopes that it will convey to possible contacts the speed at which I'm prepared to copy.

You know, I *swore* that I wouldn't like CW, that it was anachronistic and technically obsolete. All that notwithstanding, I think it's going to be a helluva lot of fun! I have a borrowed QRP rig, an antenna, and a desire to communicate--all advice is appreciated...

>>for intership communication.
> ^^^^
>would that be intraship?
>I think they use radio intership :-)
>

Well, sorta. They are usually used for interior communications. The sound-powered phones are also used between ships that are doing underway resupply or refueling. There is a "messenger line" with distance markers and a phone wire strung between the ships before anything else is connected. The ends or the wire are connected to the sound-powered telephone circuit to the "bridge talker" on both ships. Apparantly the Navy trusts the sound-powered stuff to work even if radios do fail. A "Breakaway" order from either "bridge talker" usually gets over faster than the radio chatter, and if the tactical situation requires radio silence----.

Was out there one dark and stormy night, when a destroyer was trying to refuel from our aircraft carrier. His props and rudder came out of the water on a particularly bad wave--instant outta control. The word to break away was given by the bridge talker on the can just before their captain realized what was about to happen, and gave the order on radio. We did it on first word anyway. Very hairy, trying to unhook all that junk while dodging another ship
.
The kid got a commendation for thinking fast, and a (light) slap on the wrist for talking too fast. We darn near got a DLG stuck through the side of our ship. I was able to get a picture of the bow of the can coming outta the water, but I was too busy running for my life to get the rest of the story on film. The destroyer rolled toward us, surfed down the wave, and was UNDER our deck overhang when the wave rolled him out the other way. Too close.

This would mean *requiring* people to accept a new callign each time they upgrade, which is a *disincentive* to upgrading. Having had the same callsign since 1957, I'm particularly fond of it, and as I approach retirement I may find the time to upgrade to Extra. However, I'm not willing to relinquish a long-held callsign to do that without some serious thought beforehand; i.e., how badly do I really want that bottom 25 kHz just to work CW DX?

>While there are exceptions, how many exotic DX stations keep up with
>the way the FCC allocates callsigns in the USA. Or to put it another
>way, how many USA amateurs can detail how Austrialia or the UK allocates
>their callsigns?

Excellent point. And why should they? That's a regulatory issue within each country. If the OOs were given on-line access to the FCC database (via Telnet or some such) then they could quickly ID an "out-of-bander." But *no* system will accomplish foolproof IDing of privileges unless prefixes are made *very* distinctive and *everyone* gets a new license and callsign; i.e., start over again from scratch. All Novices start with N or N(*), all no-code techs with AA thru AK, code techs with AL thru AZ, all generals with K or K(*), all advanced with W(*), all extras with W. Every time you upgrade, you get a new call. Big Brother now has total control.....

Would this be retroactive to all current license holders? I don't
think a mass reissue of calls with be popular with anyone, especially
the FCC.

Second, will you be *required* to change your call when you upgrade?
This probably won't go over well, either. If a person stays a while
in one class and has a well-known call, he won't want to lose it.

If license class is known from the callsign alone, poor operators will
likely "appropriate" a call from the desired class and use it instead.
There are enough callbooks and callsign servers around that if there
is a question on whether someone is operating in the appropriate band,
he/she can be checked out rather quickly.

Mike--

Maybe while ARRL is making that change, they can also create a "Silent Idiots" label, so that when closed-minded fools such as yourself keel over and die, they'll have an appropriate place for your callsigns.

I'm an Advanced op, yet I realize that No-Code Techs make worthwhile contributions to the hobby. And they have fun doing it. Let them enjoy themselves. Give it a rest.

If they're operating full breakin you could try sending BK BK and
see if they pause, then politely ask them to slow down. If they're
good operators (as opposed to simply *fast* operators) they'll
cheerfully comply. If they're not running full break-in or not pausing
much between characters (semi-breakin operation) they may not hear you,
so you'll have to wait until they finish.

>I did notice that I seemd to be sending my callsign interchanges faster

>prepared to copy.

Excellent! You've identified one of the common problems (most of us
do, or have done, exactly the same thing), and you're right, people usually

assume that whatever speed you use for your calls is the speed you intend to use for the contact. To send your calls too fast and then ask everyone who answers at that speed to QRS is - well, there's no other way to put it - "lid-dish."

>You know, I *swore* that I wouldn't like CW, that it was anachronistic
>and technically obsolete. All that notwithstanding, I think it's going
>to be a helluva lot of fun! I have a borrowed QRP rig, an antenna, and a

David, you're well on the way to being a good CW operator already - you're *asking questions*! Might I suggest that you invest in a copy of the "Radio Amateur's Operating Manual" from ARRL; it's a little pricey, but chock full of good info. I buy a new edition every few years. It has tips on all types of operating, and will help you quite a bit when/if you start chasing DX, or operating in traffic nets, or whatever.

Yes, CW is *technologically* obsolete, but as a communications medium it still has much to recommend it. And it is fun for many (but not all, and that's not meant as an indictment against those who don't like it).

And, finally, let's try a sked sometime! I can work all bands 80-10 plus WARC; maybe 40 or 30 meters at night would be good.

Oh, good, at long last, a fresh line of argument - "if you don't beep, you ain't squat". I really love it when someone comes up with something new in this newsgroup.

The next time I help with traffic control at a local event I'll bring a bench and straight key with me. If God wanted me to beep all the time, He'd have given me a modem and bug in place of a voice box.

Guess I'll have to invest in the disk space for those killfile directories after all. Congratulations, Mr Deignan, those stink bombs you throw actually have an effect.

For the record, code users definitely have a place in Amateur Radio, but that place is not to tell the non-code-users they're lazy or "not real hams".

Well, Gary, I frequently *listen* on input, as Mike mentions, to see
if I am in simplex range of a station I'm talking to via a repeater.
If we are in simplex range, then I'll, using the repeater, agree on a
frequency and move. Nothing malicious about that.

>>however, have a suggestion as to where on your anatomy you can install your
>>iron re-bar...

>Watch out, Jeff! First they suggest installing iron re-bar in one of your
>anatomical orifices under the pretense of improving your RF ground, then

First of all, I've been advised via email to not use iron rebar so now
I'm using stainless steel, instead here at work (I have a ham station
in my office!). Certainly the salt would have eaten the iron in no time
at all. At home, I've run a ground wire to a fire hydrant - the city's
water mains make a great counterpoise...

Now, Dave said that he hoped hams would be more tolerant than the
rest of society concerning the activites of gays. But why should
society have to change their innate feelings to suit a mere 2% who
choose to participate in these nauseating acts? Maybe that 2% should
be more tolerant of our feelings.

Oh, for those of you who live in a residential area with antenna
restrictions you might try this: I've loaded up a street light post in
front of the house using a gamma match (see The Handbook); it works *great*
with my QRP transmitters (less than 1W).

I must remember to thank the city for providing me with a fire
hydrant and a street light...

I'm like Jim; I passed Element 4(A) (Advanced written) in 1980, at the
San Francisco FCC office. I passed 4(B) (Extra written) at a VE session
in Lancaster in 1990. 4(B) was, for me, really easy. I just had to bone
up on some arcane rules/regs. I have trouble remembering 4(A); I was
16 then, and I recall it was challenging. However, I haven't looked at
the current question pools yet.

Deignan isn't the only one who feels that way. I live not a mile from him and hear the same psychobabble on 2m and 70cm. It's a way of life for most Rhode Islanders which is most unfortunate.

It's amusing when some tropo occurs and all the no-clue's clamor over each other for that "rare DX" contact.

I don't mind a no-code who doesn't complain/whine/bitch about HF access and who doesn't act like a complete fool when tropo occurs. A 2m repeater isn't the place for it.

EXCUSE me. There's a difference between "changing your innate feelings"
and not beating up people.

Let me phrase that slightly differently. You have the right to be
disgusted by whatever you want to be disgusted by. That does *not* mean
that anybody, anywhere, should be discriminated against, beaten, hounded,
harrassed or killed because of what they do behind closed doors with other
consenting adults.

Your feelings and your words reflect poorly on yourself and on the Amateur
Radio Service. If you want to be bigoted, I won't try to stop you. But,
for everybody's sake, keep your ignorance and hatred to yourself. I'd hate
to think that I'd lumped myself in with you when I took and passed my test.

By the way, while I don't have definitive numbers, I hear that about 10% of
the US population is not-heterosexual.

How similar are the US trucked systems to the European systems - based I
think on the UK spec MPT1347. I am involved with a Nokia Actionet system
which is used quite a bit in the UK and various other parts of the world.
Just wonder how much it differs from the US systems.

>From ARRL Headquarters
Newington CT October 20, 1994
To all radio amateurs

SB QST ARL ARLB082
ARLB082 Emergency declared

Voluntary Communications Emergency Declared

All Amateurs are requested to cooperate by recognizing the existence
of a voluntary communications emergency and therefore relinquishing
the use of frequencies between 3967 and 3978 kHz and between 7245
and 7251 kHz for the handling of Emergency Traffic.

The above declaration was made by the Federal Communications
Commission, Houston office, on Wednesday, October 19, 1994.

In recent days, heavy rains have caused flooding in Texas. The
southeastern part of the state has been hit especially hard. The
following nets have been active in handling emergency and priority
traffic related to the emergency. Health and Welfare traffic is
also being accepted on some of the nets. Please observe the net
control's direction when checking in. Thanks to Joe Brown, K5UPN,
Northern Texas Section Emergency Coordinator for this information.

During the daytime:

7230 kHz Southwest Traffic Net
7235 kHz Central Gulf Coast Hurricane Net
7248 kHz Texas RACES Net
7273 kHz Daytime Texas Traffic Net
7280 kHz NTS Region 5 (Daytime)
7290 kHz 7290 Traffic Net

During the evening:

3873 kHz Texas Traffic Net
3925 kHz Alternate frequency for Southwest Traffic Net
3935 kHz Central Gulf Coast Hurricane Net
3975 kHz Texas RACES Net
NNNN
/EX

987. Touch Tone Paging (DTSS)

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-19 22:47:35 UTC
From: feher@netcom.com
Message-ID: <feherCxxzBC.77B@netcom.com>
Source record: 258104

Hello Everyone!

's wonderin' whether touch tone paging should/shouldn't work via a repeater. When I try it simplex, I page the other HT and it opens up its squelch, no problem whatsoever. Same thing doesn't work when going through a repeater. Would it not work cause the repeater shifts the touch tone frequencies and they are therefore not recognized by the receiver expecting the codes. I did indeed wait till the repeater kicked in to release the three codes, even done it manually ... without success.

Whatsgoinon?!

Thanx for readin'!

John

Jeff-

"Back in the good old days" - I took both tests in front of the FCC in one session. It was around 1973, and I was only about 3 years out of College (EE).

I found the Advanced material more superficial. I felt memorization would have been adequate to pass the test. On the other hand, It was a good thing I had been studying hard. The Extra test was quite rough, requiring a lot of thought. Lets see - if the Class C amplifier's base voltage is negative, is it an NPN or a PNP transistor?

How is it today? The best way to find out, is to just go ahead and give it a shot! Next best, is to find some of the tutorial computer programs. There are some that give you a simulated test, based on the official question pool. I've seen them for both Mac and MS-DOS, at various HAM ftp sites. Some of them are based on an older question pool, but they should still give you an idea of the test difficulty. The question pools can also be found at the same ftp sites.

> modulation posibbleches,.

Pablo-

Yours is a common problem with the TS-120S. Not only are there components that can cause it, I heard there was a factory bulletin that covers it.

Early reports were that you needed to go to the PCBs and install star lock washers under all the screws holding them down, to provide good ground connections. I discussed this with a technician at Amateur Electronic Supply, who said that it shouldn't oscillate, even with the screws removed! He successfully repaired mine by replacing one failed component. As I recall, he claimed mine already had the Kenwood mod incorporated.

First thing you can try, is to tighten all the PCB mounting screws, and see if that helps. Then, contact Kenwood about the service bulletins for that problem. You may have to send it back to Kenwood.

If it wasn't for this problem, the TS-120S is a fine little radio. Its only other drawback is a slight drift in the VFO. In general, you can depend on the digital display once you've calibrated it. But, be aware that the VFO drifts 100 Hz before the next digit changes on the display. It should be calibrated so that the digit just changes from 14.999.9 to .000.0, when you get the same tone on upper and lower sideband, on 15 MHz WWV. (Does that make sense?) In case you didn't notice, there is a rubber plug on the left side of the radio, that covers the calibration adjustment hole.

David-

A local Ham club here gives tests each month. They encourage you to keep taking progressively higher elements until you fail, since there is only one charge per test session. As a result, many people go further than they planned. (It has the side effect of giving the club a higher failure rate!) Taking the code test at the higher speed first, helps overcome nervousness, since you have no pressure to pass.

As far as getting people to slow down, the first step is for YOU to send slower! Even then, you may have a tendency to send faster than you can copy, so give yourself a safety margin.

I suggest you give the guy who ran out on you, the benefit of the doubt. But, be aware there are all kinds of people out there, and don't let it bother you.

As you can guess, you get better with practice. Nothing beats on-the-air experience to build up code speed. A 130' dipole sounds like 80 meters, which may be a good band to get to know people nearby. I find 80 and 40 more friendly than the "Hello Goodbye DX" bands!

One of My Books that are sitting on my book shelf is entitled:
THE LASER DOPPLER TECHNIQUE
I bought it from the M.I.T. Bookstore.

I have a BSEE.

LASER DOPPLER RADAR DOES EXIST! HOW DO YOU THINK YOUR LOCAL TV STATION GETS THOSE NICE WEATHER RADAR MAPS? SOME ARE MICROWAVE BUT SOME ARE LASER DOPPLER! ALSO THE FAA IS LOOKING INTO BUILDING A WINDSHERE DETECTION DEVICE, it uses guess what ..... LASER DOPPLER RADAR. Raytheon may be awarded this project.

LASER RADAR CAN BE EASILY STEALTHED! ANY CAR CAN BE SET UP to absorb the infrared light. or use multi faceted material.

Why do I study up on this? It's my hobby. I built up a 15mw Laser for Cloud writing. It's frequenct is 520nm. Whenever I use it for either cloud writing or just playing around... someone calls in a UFO sighting. 520nm is nice because the ^&%^@# Sodium Lights don't wash it out.

Anyway the LASER Doppler RADAR bok is by Dr. Drain and is abailable in most College bookstores that offer an advanced electronic engineering course.

BTW, the light source does everything the Microwave Doppler does, except with a tigheter resolution.

Gee Som small Radar Ranges are at 10Watts.
I worked with High Speed Lasers that were capapble of 2 Gigabits per second.
The BER Monitor was a hazardous device because of the frequency it operated on!
Also one guy who liked to place the decice close to his lap has died in 91! I left
when he was diagnosed with prostate cancer. I was always carefull, I didn't even let the
the RF cable near me. I also had a shielded work area and I tried to tell
the other engineer about the hazards, he just laughed it off like yourself.
This device was only running in the 500mw range!

>others call sign to work in Packet Radio.

In the USA a strict reading of the amateur regulations would prohibit the use of PGP for signatures because the signature is actually an encrypted MD5 digest of the message; you can't use encryption for hiding any information. I doubt the FCC would ever bring any action against an amateur using PGP signatures though.

For one- the MD5 digest can be computed from the original message so it would be difficult to consider it as being "hidden". Also, since the signature is use for authentication purposes it may be legal anyway under a less strict interpritation of the rules.

Using IDEA to encrypt your message would be illegal though so don't try and send PGP encrypted messages around the USA! (Exceptions to this would be telecommand of space stations and RC vehicles which are specificaly exempt from this prohibition of the use of codes and ciphers...)

An intersting idea that I've been thinking about working on is a secure login facility for remote packet systems. If the remote system issues a challange string it could be signed (or even encrypted) using PGP by the connecting station. This would make a very secure login method that would be near impossible to break or spoof if the challange strings were carefully selected and used only once. Unfortunately I don't have the time. Maybe someone else will write it...

Well here it is, the publisher for the Laser Doppler Technique is:

John Wiley & Sons
Offices in New York , Brisbane, & Toronto
(c) 1980 John Wiley & Sons Ltd.
it sells for $59.95 hard copy
It is written by L.E. Drain
he works at the Atomic Energy Research Establishment in Harwell

FYI
Capter 1 Contents:
The Doppler Shift
Optical Beating
The Diffrential Doppler Technique

Chapter 2
Geometrical Optics
Wave Optics
Interference
The Michealson Interferometer
Interference between two reflected beams
The Farby - Perot Interferometer
Diffraction
Diffraction at Focus
Gaussian Beam Optics

Light Detectors for LDA
PhotoMultipliers (Duh)
Derivation of the Doppler Shift
Relativistic Doppler Shift
Alternative Derivation of the Doppler Shift on Scattering
Doppler Shifting by Difraction Gratings
Brownian Movement and the Doppler Shift

If you had college calculas you can understand the theory. It's not a
nontechnical book. With the information provided you can make your own
device (NO SCHEMATICS BUT ENOUGH THEORY SO IT WILL NOT BE A PROBLEM)
And do some math, what is the best frequency of light for this
device... use common sense. Infra Red causes Jitter so... please
Mr. that tells me no such thing as Laser Doppler Radar that NASA allready tested and the
Air F
Air Force allready has... tell me... what's the frequency Kenneth

MAN, I'm not just a hobbyist, It's how I earn a living. Check out the book rt tt sth

[Article crossposted from rec.radio.shortwave]
[Author was Kirk Baxter]
[Posted on 19 Oct 94 21:49:48 CDT]

Our local power company (Kansas City Power & Light) has a very noisey power system. For hams and SWLers, it's terrible trying to hear much of anything in certain parts of town (and I live in an area with mostly underground lines).

I've been facing S9+ power line noise for months, and about a month ago, the crew which tracks down noise did identify the problem hardware. However, my problem is now that the company just simply can't seem to get anyone out to fix the problem.

What can be done? Has anyone else had (and solved) a similar problem. Please, no comments about calling the FCC, since they certainly would be of no help. Short of taking a chain saw and cutting down a few poles, what can be done?

|>I'm looking for something that I can use for both non-contest logging, and an
|>occasional casual contest effort.
|>
|>Wish list:
|> Rig control for an FT990
|> Runs under windows

I use Logic for Windows. It automatically controls and logs information from my FT-767 (and I'm fairly certain it handles the entire Yaesu line, to the extent available by each rig.) It provides:

Contest mode with user definable contests
Automatic dupe checking
Completely customizable logging, track whatever you'd like
Support for multiple operators
Award tracking for just about anything
User definable bands and modes
Generalized report writer
DX PacketCluster Spotting and CW/verbal announcement of needed spots, spot announcement, plus user definable alarms
QSL tracking
Award reports available
Interfaces to various callbooks such as QRZ, Hambase, etc.
Prints QSLs, labels, etc.
Automatic copy forward of previous QSO information
Terminal emmulator/control for packet/RTTY/etc.

For contesting, the biggest drawback is the lack of real time scoring and lack of a needed multiplier display. You can check for needed multipliers so you can still see if you need something for the contest. If you decide to get serious about contests, then use CT and import the CT data to Logic.

In my use, all I do is enter the call sign and signal reports plus any additional QSO information such as name, QTH, etc., and Logic takes care of the rest. It automatically gets the frequency (and band), mode, date/time, CQ zone, ITU zone, DXCC need, bureau info, 3rd party info, sunrise/sunset, heading and return heading, distance, and time zone and difference. Logging is a breeze! Everything is table driven so as new countries are added, old ones deleted, prefixes added/deleted, etc. all can be accomodated.

I've used Logic for a couple of years and find it a great package.

73,
Todd
N9MWB

PS I have no affiliation with PDA (developers of Logic) other than as a happy customer.

Sorry Michael... try again later please

Most of the no-code techs now have keys and codes. Listen to any good
2meter repeater and you will hear them making auto-patches from their
touch-tone keyboards. Most have even entered pl codes from their hand-held
key pads. Even though the ARRL is pushing incentive up-grades, I don't
think you realize that your concept will only justify the multi page
advertisiments in QST for dual-band portables.

Dear Mr Rickard

re PBBS User Authentication

Further, to our telephone conversation on Monday, 26 September, I confirm that under current and proposed Australian amateur regulations it is permissible to use encrypted strings for the purpose of authenticating the callsign of the amateur operator who originated a packet radio message.

The attitude of the SMA to the issue of authentication is that there is no objection to the voluntary use of authentication schemes, involving encryption, but we do not propose to legislate to make authentication mandatory, or to specify a particular scheme. This is consistent with current policy of reducing regulation wherever possible.

Please bear in mind that in assessing any proposal on this issue we would have regard to the philosophy that, in general, access to repeaters and bulletin boards should be as open as possible. The approach to authentication, that you suggested during our telephone conversation, under which authentication would be voluntary for users of packet bulletin boards but messages without authentication would not be retransmitted automatically, conforms to this philosophy. Retransmission only after viewing to confirm that the content of the message is not libellous or in breach of amateur regulations is the right of any operator (and seemingly a good practice generally).

Further, bulletin board operators who adopt the practice of automatically retransmitting received messages should be aware that, even with authentication, section 108 (d) of the Radiocommunications Act 1992 places the onus on all licensees, including bulletin board operators, not to permit their transmitters to be used to affront, alarm or harass or otherwise contradict the Radiocommunications Act. We do not propose to waive that onus for bulletin board operators when authentication is used, as you say the US.

Federal Communications Commission has done; but, never-the-
less, in enforcing section 108 (d), the SMA would take all
circumstances into account.

I trust that the forgoing clarifies the SMA position on
the issue of authentication. Please contact me again if I
can be of any further assistance.

Yours sincerely

John Kington
Manager, Technical &
Operational Support

Even the number in the callsign is becoming meaningless. Here in CA I know a couple of N2XXX and KB4XXX hams. Soon, I'll be moving to 7-land (NV or AZ), but I don't want to give up my callsign.

1009. HOW TO LEARN CW???

Newsgroup: rec.radio.amateur.misc
Date: 1994-10-20 06:17:00 UTC
From: bob.stanton@exchange.com
Message-ID: <2d.26369.2003.0N851631@exchange.com>
Source record: 258099

From: bob.stanton@exchange.com
Subj: How to Learn CW???

I give up! I have been trying to learn the code since before I was licensed with no luck. I have tried tapes... all I do is memorize the tape... not the code. I sit in front on my computer pounding my head on the keyboard (figuratively). I HATE CW!!! I don't even recognize my own call in CW. I will use it ONLY to upgrade. I have no intention ever to participate in a CW QSO. I realize that there is no way, for the time being, to up grade without submitting to the dictates of those who say "I had to do it so you must". That will change in a few years, but I can't wait till then.

I realize that I do not have the proper attitude to learn code. I feel it is the same as when I was a kid growing up in the early 60's. I had to learn Latin so I could participate in the Mass. I took all summer of my school vacation after the fourth grade to learn all the proper phrases and what they meant. The next month the announcement came out that the Mass would be in English. I don't remember any Latin now.

What is the best way to do it? I want the HF privileges. I am willing to work for them. I just hit a wall every time I try to force myself to do something I hate. I know that some who read this will just flame me. I have faith that some will have good advice and will be willing to share it with me.

Thanks in advance.

Well a few months ago I ordered a publication over the phone (don't remember
what now). Gave the person my credit card number, the person read my number
back to me, everthing was correct. Four and a half weeks later I got a
letter that said my credit card charge didn't go through because the number
was wrong! I bought the book from "another vendor".

I have since purchased publications from the ARRL by mail order and usually
have the material in about 2 weeks.

Maty Weinberg (maty@arrl.org) handled an email order for some back issues and article reprints from QEX for me quickly, courteously, and professionally. I was also able to find out via email which back issues of the ones I wanted were in fact available. The materials arrived in the mail about a week after our email exchange.

And, yes, the mail is pretty slow. One week either direction to/from my parents in South Carolina seems to be the norm.

Subject: ARRL to change "Silent Keys" label in QST?

With the popularity of the no-code license, its only a matter of time, if it hasn't occurred already, that a no-code tech will die and have his/her call listed in the QST "Silent Keys" column.

Clearly, we need some "Truth in Advertising". These hams can't be silent "keys", because most of them were probably too lazy to touch a key (or even know what a key is, for that matter...).

Therefore, I think its incumbent upon the ARRL to split the "Silent Keys" column into two sections: a "Silent Keys", for real hams that know what a key really is, and a "Silent PTTs" section, for the 2 meter good-buddy box users.

I urge all to write to the QST editor and encourage this course of action.

From: n5ljv@uh.edu (Brad Killebrew N5LJV)

Subject: Callsigns.

The following comments DO NOT reflect the ham population in general,
rather just one individual that have the unfortunate luck of knowing.

This particular fellow is a no-code Tech who is still an avid CB'er.
His "CB" rig is a modified Uniden 10 meter radio with a 500 watt amp.
While this person loves to operate VHF and UHF repeaters, he also enjoys,
rather frequently, moving his "CB" rig into the ham band and shooting DX.

What's wrong with this picture?

For starters, his amateur license does not authorize him to operate
in the amatuer 10 meter band. Second, if he DID have a Tech Plus, he
would still be illegal because of his 500 watt amplifier. Third, he his
operating illegally on the CB band as well -- the 500 watt amp again,
plus the modified 10 meter radio.

Now before all the no-code Techs start flaming me, I am not, in any
form, throwing stones. I am simply bringing a topic up for discussion.

Here's the topic:

Now that the FCC has their new computer online, the FCC should program
their computer to issue DIFFERENT class callsigns to EACH license class.
I believe that if this particular ham that I mentioned above would have
a class-distinctive callsign, other hams would know that he is not
authorized on those frequencies. This problem is also compounded because
in most call districts, Technicians and Generals are assigned Novice calls
because 1x3 N-calls are gone.

Since there is such a large pool of amateur callsigns that are available
for issueing, I don't think it would be a problem. The only hurdle would
be getting the FCC to agree on this issue and impliment the plan.

What do you guys think? Have you ran into the same problem that I have?
I think with some planning, some backing by the ARRL, and some letter
writing, this idea could become reality.

The Bryantown-Zekiah Swamp VE group (ARRL VEC) has one
scheduled for the 20th of November in White Plains MD
(just south of Waldorf in Charles County).

You might also check with the Maryland Radio Center in Laurel; I think
they are W5YI VEC and give them on the third Saturday of each month.
There phone number from DC metro is 301-725-1212 (ask for Jerry).

> What is it all coming to?

If it's any consolation, it's just as bad in Europe. Last week I drove from my office in London to the Head Office in Paris during a humungous lift on both 2m and 70cm. In spite of the excellent conditions, I wasn't able to work anybody due to the appalling manners of a collection of non-mobile G, F, PA, PE, PI, ON and DL hams working through the repeaters, and (I kid you not) agreeing to exchange QSL cards!!

Us mobiles (whom, I thought, the repeaters were actually meant for) didn't get a look in!

A special LID of the year award to Monique, F1*** Monique, if you're reading this, did it occur to you to actually listen on the input for all those rare DX stations that you thought you were working?

Subject: MFJ Versa Tuner III Woes

Hello all ....

I have an MFJ Versa Tuner III that I've had for about two years but have only recently had the opportunity to use and I've run into what I consider a serious problem.

This weekend some friends came up and we put up a 160M half wave dipole. This is the first dipole ever really connected to the MFJ. I also am using an Ameritron ALS600 amplifier with the runer. The amp is rated at no more than 800 watts peak -- which is roughly half the power rating of the tuner.

After testing everything out, I started to use the station. Everything worked for about two hours. Then I started having trouble tuning on 160M and 75M. I noticed I could see bright flashes behind dials on the tuner. FInally, the tuner just quit and I wasn't even able to receive with the tuner switched in.

Upon opening the tuner, I immediately saw the problem. There
is a small bundle of wires run from the rear connectors to a circuit
board at the front of the tuner. The wire bundle was run right snug
against the inductor coil. The point where the wire went snug had a
nice black burn area. I inspected the wire and it seems nothing is
actually burned through. I just put a nylon spacer between the wire
bundle and the inductor and things seems to be working okay again.

Has anyone else experienced anything like this? Could it be
my MFJ tuner was built improperly? Is it possible that the Ameritron
is too much load for the tuner even though it is rated at 1500 watts?
My friends suggested that perhaps the problem was because the antenna
mismatch caused the voltages to go to high inside the tuner. I think
that's why you buy a tuner in the first place and the real problem is
the design that ran that wire bundle next to the inductor.

Any comments, suggestions or hints are welcome. Especially
since this is the first time I've been able to work anything other
than 10M and 12M.

Are the Q codes required for the test in Germany? If not, the best
way is to keep a list of the most common ones at your operating
position to refer to as you operate. Repetition is the best way to
remember anything. Otherwise, try to invent little memory tricks that
work for you. Good luck!

ELECTION of RAC Board of Directors for 1995
From Ken Pulfer VE3PU

The RAC Election committee consisting of Eric Ilott VE3XE, Clayton Bannister VE3LYN, and Ken Pulfer VE3PU, met in Kingston on September 14th. Nominations of candidates for the RAC Board of Directors have now been received and validated. The situation for the seven regions is as follows.

Pacific: Two nominations were received for the Pacific Region, but one was subsequently withdrawn. As a result, Dennis Livesey VE7DK, from Delta BC is unopposed and has been declared elected by acclamation.

Alberta/NWT: Ken Oelke VE6AFO, from Calgary the current Board member for Alberta/NWT, has been renominated and is unopposed. He has been declared elected by acclamation.

Midwest: Two candidates have been nominated for the Midwest region, Bob Shehyn VE5FY, current member of the Board from Moose Jaw Saskatchewan, will be opposed by Dave Panting VE4EF from Winnipeg Manitoba. Ballots have been mailed to RAC members in the Midwest region.

Ontario North: There are three candidates competing for the position of Board Member from Ontario North. Bob Bishop VE3JAB, current Board member from Thunder Bay, will be opposed by John Connor VE3TG from Nepean and Ron Walsh VE3IDW from Kingston. Ballots have been mailed to RAC members in Ontario North

Ontario South: J. Fergus Kyle VE3LVO, of Burlington Ontario, is running unopposed in Southern Ontario. He has been declared elected by acclamation.

Quebec: Pierre Roger VE2TQS, current member of the Board from Montreal, has been nominated and is unopposed in the Quebec Region. He has been declared elected by acclamation.

Atlantic: No nominations were received from the Atlantic Region before the September 1 deadline. In accordance with the constitution, nominations have been reopened, with a deadline date of December 1, 1994.

All members from the Atlantic Region are hereby notified that nominations of candidates for the position of RAC Director (Atlantic) will be accepted until the revised closing date of December 1 1994.

Except for the Atlantic Region, all ballots must be received by the Secretary of RAC before noon, November 18th 1994. The results will be announced in December, and the new members of the Board will assume their responsibilities on January 1, 1995.

Hams hope for peace between Jordan and Israel

According to HaGAL International - Israel Ham News, peace between Jordan and Israel is only months away. King Hussein JY1 of Jordan, has been quoted in the press as having said that a full peace between the countries will be signed by the end of 1994.

Telecommunications ties have been made between the two countries and you can now phone directly. Jordanian hams have also been heard on the Yatir (145.325 MHz) repeater in Israel. They seem genuinely anxious for cross-border contacts. They are also setting up more repeaters in Jordan. There are now 11 VHF repeaters and 4 UHF machines. The Jordanians are also expressing interest in Packet radio.

Ham News reporter Ron Gang 4X1MK describes the QSO's with Jordanian Hams as "heart-warming". "A real good feeling comes across that our partners to the East are just as enthusiastic about this peace as we are," he continues. "The Hams there exude friendliness and warmth. There's hardly anything better than making new friendships! Ya Salaam!"

Nobody knows the official opinion of the Jordanian government on these cross-border contacts so the names of Jordanian Hams were not published in the article, just in case.

Coming soon to an orbit near you

The opening shots in the next revolution in marine communications are about to be fired. The battleground will be space, and the rebels' weapons will be communications satellites. That's according to a special report appearing in September 1994, Sail magazine.

As early as this time next year, according to the report, mariners should be able to bring aboard pocket-size message transceivers that can send and receive data anywhere on earth and portable telephones that make voice connections up to 200 miles off the US coast. In 10 years the old guard - VHF, SSB, Ham, ERIRB - could be systems of the past the report says.

Relatively low cost satellites and land systems, combined with compact, efficient radio hardware and software are credited with driving the changes.

FM mode Amateur satellites

Of the 18 available Amateur satellites presently in orbit, four offer, at various times, transponders for general use. Two of these, AO-21 and AO-27 operate on 2m and 70cm. Being low earth orbit satellites, both are overhead for short periods, usually ten to fifteen minutes per pass. There are about six passes per day, three morning to mid-day and three at night.

OSCAR-21, or AO-21 has a unique repeater that lets you input on 435.016 and output on 145.987. To copy tune 145.990 or 145.985. When you listen for AO-21 you will soon notice that at the first part of the pass you can hear it better on 145.990, then as the pass progresses hear it better on 145.985. All you need to listen is a rubber-duckie equipped handheld.

This quick introduction to AMSAT was condensed from a more complete article written by Art Rae VA3RAE, in the Windsor Border City Radio Club Newsletter.

HF Band Planning Committee
From Pat Doherty VA3GD

The Committee now has four representatives from three regions. Representatives are still needed for Atlantic, Quebec, Ontario South and Pacific. RAC elections are now taking place and three of the areas will have new directors. If any person in the above areas has an interest in being the HF Band Planning Representative please forward a resume of Amateur activities and interests to:
Pat Doherty VA3GD
HF Band Planning Coordinator
RR#1-10035 John Street Road
Murillo, Ontario P0T 2G0
Phone (807) 935-2253
Fax (807) 935-2134
E-Mail: pat.doherty@oln.com
Packet: VA3GD@VE3TKA.#NON.On.CAN.NA

Upon receipt of your resume the respective RAC director will be contacted for comment and approval. You will receive a reply as soon as possible.

Canadian Amateurs in the respective areas where there are appointed representatives should direct any comments on HF band planning to one of the persons listed here. Please take the time to express your thoughts about the future of the HF bands.

Antenna nightmares

There is a story in the Chilliwack Amateur Radio Club Bulletin about a Vancouver Amateur who learned the hard way how tough it can be to get an antenna erected in some communities. His plan was to erect a tower sufficient to support a 20 foot dish for EME (earth-moon-earth) communications. He ran

into local requirements for a building permit if the antenna was higher than six feet above the ground. The building standards he was required to meet resulted in the construction of two concrete pads one 10'x10'x6' and the other 8'x8'x6' to support his tower.

1,000 DXCC countries?
From Algoma Amateur Radio Club Bulletin

Don't jump out the window yet, but John Naisbitt, one of the world's leading trend forecasters, has predicted that from today's roughly 200 independent countries (not counting ARRL's rocks, shoals and reefs), the world will have an increase to 300 countries by the turn of the century. During the 21st century this is expected to increase to 1,000. This will result, Naisbitt predicts, because of increased nationalism and tribalism around the world. Canada's Quebec could well be a future example.

How about getting on the DXCC Honour Roll when you will have 950 or more confirmed countries to qualify?

RAC First National Convention trivia
From Calgary Amateur Radio Association Key Klix

Attendance at the RAC first national convention in Calgary this past July appears to have topped 1,000. Those who travelled farthest included Edward Leppard VE1AYY from Halifax County, NS and Michael Morrison VY2CO from Charlottetown, PEI. The youngest Ham who registered was eight year old Alex Vogrinetz VE6YIC from Lamont, AB. The oldest to register was Bill Savage VE6EO from Lethbridge, AB at 86. Bill Kennamer K5FUV from ARRL DXCC desk checked 5,400 cards. That apparently topped the Dayton Hamvention this year.

The Friday evening wine and cheese party was attended by 407 people. There were 30 seminars. The RAC Forum drew 450 people. The Annual General Meeting was the largest in the history of any Canadian Amateur Radio national organization with more than 300 in attendance. The Saturday evening banquet was attended by 356 people. The BBQ was just short of that with 326 people attending.

Victoria BC repeater 25th Anniversary

The Victoria Short Wave Club will celebrate their 65th Anniversary with a special dinner at the Masonic Conference Hall on November 26, 1994. This is also the 25th anniversary year for the Victoria repeater.

Montreal repeater sold

The VE2RED repeater has been sold to the Montreal Amateur Radio Club. It was purchased from the Montreal Repeater Organization. VE2RED is said to provide excellent coverage and there is discussion concerning possible future linking to VE2BG. The deal was completed on September 1.

FCC denies morse code exemption for over-65s
From the ARRL Letter

The FCC in the US has denied a petition that proposed exemptions from Morse code exams for people age 65 and older.

Guy A. Matzinger KB7PNQ, of Cheney, Washington argued in his petition that old age results in diminished faculties, and equated those people 65 and older with the severely disabled in terms of passing a CW exam. He proposed the exemption for speeds above 5 wpm.

The FCC said that similar petitions had been denied in the past, because the current Amateur Radio license structure is based on "the desire of the amateur service community," gleaned from thousands of comments on previous petitions. The Commission also noted that its rules already provide for Morse code exemptions for certain recognized disabilities.

Upcoming events we've heard about...

October 22. The Greenwood Amateur Radio Club Fleamarket, Greenwood Community Centre, Church Street, Greenwood, Nova Scotia. Information line (902) 756-4660.

November 12. The Newmarket Hamfest, Huron Heights Secondary School, Newmarket, Ontario. For information write to the York Region Amateur Radio Club, P.O. Box 28590, Aurora L4G 6S6.

November 26. The Victoria Short Wave Club will celebrate its 65th Anniversary. There will be a banquet on November 26, which past and present members and their spouses are invited to attend. Information line (604) 474-1939 or (604)478-9650.

Special Events Station VF7L

The Fraser Valley Amateur Radio Association will be operating a special event station VF7L from Fort Langley on November 19, 20 and 21, 1994. This event commemorates the 136th Anniversary of the proclamation read by Sir James Douglas at Fort Langley on November 19, 1858 creating the Colony of British Columbia.

Station VF7L will operate on 20, 15 and 10 meters from 1700Z to 2300Z over the three days. A special certificate will be available. Send a 9"x12" SASE and $1.00 to cover postage to:
Fraser Valley Amateur Radio Association
P.O. Box 50
Fort Langley, BC, V1M 2S6.

Upcoming in your November TCA

The November issue of The Canadian Amateur includes important information on how you can help fight EMCAB-2. This is the Industry Canada document that has the potential to force amateurs to power down or cease operation because of the lack of immunity standards in nearby entertainment equipment. This is the most serious threat facing amateur radio in Canada today and deserves your full attention and action.

Also, in the November TCA, there is more coverage of the RAC Convention in July, a request for nominees to the Canadian Amateur Hall of Fame, some

thoughtful suggestions by Ken Oelke VE6AFO, guidelines for contributors to TCA, results of the 1994 Canada Day Contest, a report on the Singapore IARU Conference from Tom Atkins VE3CDM, a product review of the Ham Log application software, more tips for the shack from Frank Merritt VE7FPM, plus Letters, Silent Keys, the Swap Shop, propagation forecasts, and regular columns.

> but leave in one pair for testing purposes.

Is this a misprint of FT-223?

The FT-221 is a synthesised multimode rig. Current secondhand value on the UK market is about 200 to 300 pounds (US$ 300 to 450) depending on condition.

Subject: Where do I get a license?

Hello! You got a name?

> Where do I get a license??

It depends on what country you're in!

If your lucky enough to live in the UK, you can download a file called HAM-FAQ.TXT from the BBS listed below which will tell you everything you need to know.

If you're one of these poor unfortunates from one of those dreadful foreign countries, let me know which one as I may yet be able to help.

Cheers
Mike

In article <37uv1p$gt5@mark.ucdavis.edu>,
Jeff Hall <szhall@chip.ucdavis.edu> wrote:
> Whats your opinon? Is the written Advanced class or Extra class exam
>harder? I am just asking about the written test not the code..thanks..Jeff
>

The Advanced written test is probably harder to study for because you have
to learn more electronic theory rather than memorize who can launch
satellites... However, neither of these present-day written exams is
nearly as difficult as the General written exam that I took 18 years ago;
you had to draw schematics for common circuits, and the questions and
answers weren't "canned" like today's exams.

From: seeler@UPEI.CA (David Seeler)
Subject: ARRL ORder Desk Problems?

I was wondering if any one else has had problems with the ARRL order desk
in respect to phone orders. I have had problems the last two trys. Once I
was double billed for one order - and that took over a month to get
corrected. This last time I ordered a copy of the 1994 dig. conference and
a number of 1994 QEX issues. I received the billing two weeks later on my
visa but had not seen the books so I waited another week before calling in
case they were in the mail. I was told they had no record of my order. As
before I was told to copy my visa statement and send it in and it would be
delt with.

Now - about three weeks after having sent the copy of my statement in (I
know the mail is slow - but this slow?) I had heard nothing so I called
